FIRESIDE MUSINGS.

BY J. P. WHEELDON.

WHEN, in the chill, mist-shrouded gloaming of a dull, cheerless day, one half involuntarily draws up closer to a handful of fire smouldering and flickering in the grate, how easily, amidst the still quiet attendant on solitary musings, does memory o'erbridge the evershifting gulfs of the past. Fancy, possessing herself of the easel, erected by an idle brain, a medium for thought pictures which sometimes stands close to one's elbow, and is sometimes huddled afar off in shadowy corners, paints thereon may be, a picture glowing in hopeful tints of bright, warm colour, or a canvas which is toned down by a certain moistened dimness of sight, a state of things possibly evoked by saddened recollections. Feathery particles of ash drop well nigh silently through the smoke-grimed bars, while now and again the clink of a falling cinder breaks the quiet stillness of the solitary room. Dead and gone faces seem to live again, one hears afresh the echoes of once familiar voices, while half-forgotten lineaments grow upon one's memory, until they are once more instinct with vitality.

As one sits thus quietly thinking, it would almost seem that the clasp of a well-remembered, dearly-loved hand is pulsing anew with warm and vigorous, if fanciful and shadowy, life. How little serves to give birth to such like idle yet pleasant fancies. As I sit here to-night, with my pipe as sole companion, I am perforce compelled to listen to the wailings of a shrewd, keen, blustering wind, which is rattling the casement in its strong grasp, and whirling of falling and fallen autumn leaves into strange and unaccustomed harbourage. Outside, in the sharp, keen, well-nigh frost-laden air, they fall unheeded on every hand, yet each dry and sapless leaf among them emits a little shiver, as it rustles down from the swaying tossing boughs overhead, as of regret for the dead glories of the golden summer. Then the wind comes whistling shrilly from its home over the tossing, moaning sea, and the frightened leaves fly shivering before its breath, until they find a final resting-place from whence they never issue more. Close to my elbow, amongst a litter of books and scraps of manuscript, stands a plaster cast of a well known fisherman and clever piscatory limner. The features of my dead friend, for alas he is gone to that sad and far-off bourne from which no traveller ever returns, seem in the dim firelight to be softened with traces of his amiable loving nature. His large mild brown eyes, —brown so dark that it was nearly black—seem to beam and glow yet once again with their old kindly glitter from behind his spectacles. The clear cut aristocratic cast of his features, well shaped handsome nose, and high intellectual forehead, the little fringe of thin iron grey curling hair, his long, carefully brushed whiskers and moustache, seemed to stand out in clear relief from the dark scarlet of his Turkish fez, without which adornment, for it was one to him, kindly, handsome, good-hearted fellow as he was, without a trace of conceit or affectation about him, no one amongst his many many friends, and they are and were legion, can very well recall the dead painter. I need not mention his name. Mayhap there are sorrowful eyes yet hardly dry from mourning over his loss, but every one who reads these lines will know whom I mean, at least, amongst those very many who were called his personal friends. They will know, morever, that I am speaking truth, when I say that he went down to his somewhat early grave with the assured knowledge amongst them all that no act or deed of his throughout his whole life had ever made an enemy.

His salmon rod and gaff stand close by in the corner, and a faithful friend in the shape of an old-fashioned brass and wooden reel on a shelf above my head. Many and many a time has that rust-stained reel screamed and scrooped, awaking slumbering echoes on the Spey or Earn, as the top bent down with that dearly loved, graceful sweep, at the first rush of a lusty salmon. Times out of number I can call him to mind, sitting in the armchair opposite, pipe in mouth and spinning fishy yarns, many of which taught me a useful lesson.

The wind comes with a rush again against the window panes, rattling the casement; and then I remember that, just on such a night as this, he, my old crony Arthur Wellington Callen, of East Moulsey—as good an angler, by-the-bye, as ever fisted a rod—and myself, had foregathered together. The little room was blue and hazy with tobacco smoke, out from which certain big trout and barbel, and eke a pike or two, loomed from the retirement of their glass-fronted apartments. There was, besides, a certain smell and steam of hot water, lemons, and sugar combined, together with the subtle essence emanating from a squat, ugly little decanter standing on the table, filled with some of Teacher's old straw-coloured Highland whiskey—perhaps the very best Usquebaugh ever distilled.

The conversation had turned at last upon chub fishing.

We had been at it the whole evening every one of us. Hours had slipped pleasantly past, while tongues kept ding-donging away with first an argument broached, which had held water for a time and then got smashed, then another started, probably meeting the same fate, until finally we got to chub and cherries.

"I suppose they will take them now and again," said Wellington, who by-the-bye was drinking cold tea and filling his pipe afresh.

"Oh, beyond all doubt," said the painter, following his example, so far as the tobacco was concerned. "At certain times. I can call to mind one day up at Mapledurham. Scorching hot day it was, too. Capital whiskey, J. P. Yes, don't mind if I do, old fellow. Lemon? Hum—ah. Well, a leetle bit of the rind, cut thin. Thanks." So on we go again, and "oh! the happy fisher's life it is the best of any." "Well now, you'll call to mind those splendid chub runs opposite the Roebuck, and all round the little islands facing Purley Woods. 'Course you do. Do you know I'd tried cheese, craw fish tail, shrimps, tail end of a lob, and greaves, and deuce of a fish worth talking about had I got? Suddenly I recollected a bag of cherries I had in the punt, and not altogether believing in them, I yet started a sample of Biggareaus down the next run on my Nottingham tackle. Bang away went the float, not twenty yards down, and faith, I'd got hold of a four-pounder. A rare fight I had with him, for he pulled hard to get the tackle fixed up in a bit of bush, and I pulled harder to keep him out of it, the end of it being that he took to plunging and jumping for all the world like a big trout. Rare good fun it was I can tell you, and so I ended an apparently hopeless day in the outset by killing a rattling good basket of fish. Where's the matches, old chap?"

"Crawfish tail, eh?" said Wellington, slowly and reflectively, puffing out a huge dose of curling vapour. "Ah, that's the pink, curly bit at the end of the shell. Yes—puff, puff—I can fancy that mightily. Tell you what I once saw on the Mole, and I can assure you that it pegged me back a bit, too. I wish to goodness you'd tell that girl of yours to bring in the tea-pot, W. Inhospitable cuss, you are, to be sure. Hanged if I ever saw such a fellow! Ah, well! what's bred in the bone, &c. And so to resume. One windy day, in the early part of the year, I saw a lot of chub rising under a grea horse chestnut tree hanging over the water. Every now and again one of those gummy, sticky-looking buds fell from the boughs, and, 'pon my life, the big fish made a dash at them as they fell. Whether they absolutely retained them or not, of course I cannot say. Tel you, however what I have seen more than once, and that is a shoa of chub gulping down the seeds of elm trees, just as fast as they fell."

"I've seen precisely the same thing," chimed in the writer. "I was fairly flabbergasted once to see a big chub dash at a horse-chestnut bud; and so also with the red berries from yew trees. There's a lovely chub run just below Formosa. Dare say you know it. Cookham way, you know. And there are some yew trees hanging over certain bits of it. It's a sure find for big chub there when the berries are ripened and they begin to fall."

"Talking about that horse chestnut tree," said the tea drinker, half drowsily, and perhaps it was owing to the influence of the tannin "Do you recollect, W., that chub I got from under the rhododendron boughs, below the big bream hole?"

"Do I—don't I?" was my rejoinder. "The very biggest, bar none, that I ever saw in my life. Why, confound it, man, he was over 7 lb. weight, if I recollect rightly. An old, grey-headed vagabond he was, with scales on him as big as florin pieces.

"Ah, he was a chub, that was. I'm sorry now that I did not have him set up. No more tea, eh? Thought as much. And now, I suppose, I must drink that poisonous whiskey. Ugh! pass the bottle One consolation is that we shall all die some day."

"What did you get him with?" asked the painter at this juncture The neck of that decanter will get rusty, I can see, at this rate. Two lumps of sugar, please. Thanky. And how about this big chub Horse chestnut bud, eh?"

"No, shrimp," answered the other laconically. Fed him up for two days on the best brown, at 2½d. a pint, and then tipped him about four of 'em, nicely peeled, arranged on a triangle, and quietly floated down to his home. Had them in an instant? Certainly he did without a symptom of hesitation; and if ever a man had a murderous fight in a dark, gloomy hole, on single gut, with a bad foothold under his feet, it was yours very truly, A. W. C., that night."

"Aye, and talking about shrimps," I chimed in, "do you recollect the sort of roach you and I, old boy, poor Jim Slowly and George Fox used to kill in the old Surrey Canal with them. What bags were had at the time when they were pumping the water out from the big sewer at the end of the Coburg Road. Why, bless me, there were roach landed then which were as handsome as any Colne fish that ever swam, and every bit as big."

"Ah," said my friend mournfully and regretfully; "and what bream too. There was good fishing on that canal bank fourteen or fifteen years ago, just behind where St George's Road stands now and all that mass of bricks and mortar running down to the site of the old shooting ground at the Rosemary Branch. Yes, as good fishing there as in any bit of water round London."

"Quite played out now, I suppose?" queried him in the scarlet fez.

"No, I don't think that; but every bit of the charm is gone. There were green fields then on every hand, and old willow stumps on the bank, with wild flowers growing round the roots. Then under one's foot there were beautiful beds of weeds, yellow lilies stretching out into the water, and flowering rushes fringing the bank. It's a wilderness now of frouzy streets; a howling wilderness of bricks and mortar, scrubby, scrofulous children, and mangy cats. All the lilies are gone, and, in place of the wild flowers, the bank is strewed with brickbats, oyster shells, and tinned lobster cans from America

Hardly the spot for an angler, eh ? Years ago I have passed many a pleasant hour on that bank, but now—oh, bust it, there's no tea again ! Pass the whiskey."

"A sad pity, too," said I, who can well recollect the capital fishing referred to by my friend ; "a sad pity that the company has seen fit to keep the Docks closed so long. For years I used to look forward to Saturday afternoons there ; and, at a time when I was stived up in a dusty dingy office in Tooley Street, the hope of a bit of fishing (and real good fishing too it was) at the end of the week used somehow to make the beastly old ledgers, sheets of parchment and foolscap, pounce box and red tape, look a bit less heartless. I wonder, now, if the London anglers were to petition the Companies to throw open the splendid waters of the Surrey and Commercial Docks yet once again, whether they'd do it. I don't know really, in these days of toleration of such a nuisance as howling Salvation Armies and their degradation of all honest sense of religion, whether there might not be a chance for the poor angler being tolerated, because he is, after all, only seeking a simple quiet enjoyment to the detriment or disturbance of no man's peace of mind."

My friend, to my mind, was just about to reply, but at this juncture I was roused from my reverie by a tap at the door. A girl, with a remarkable snub nose, brilliant with a recent application of yellow soap, put her head in the room saying : "Please, sir, missus says the tripe's done to a turn, it is." It was enough, for I find from experience that there is little or no analogy between old thoughts and tripe and onions.

INAUGURAL DINNER OF THE GREAT YARMOUTH PISCATORIAL SOCIETY.

THIS popular society has scored another success. The inaugural dinner which took place at the Victoria Hotel, opposite the Wellington Pier, on Thursday evening, the 2nd of November, was indeed another triumph, and will certainly solidify the position and character of the club. The attendance was all that could be desired ; the general arrangements, by the indefatigable secretary, Mr. J. Lark, were full and complete. The dinner which the proprietor, Mr. G. F. Crane, placed upon the table it would be difficult to surpass for perfection and comfort. The tables were profusely decorated with flowers and fruit. The attendance on the guests, under Mr. Crane's personal superintendence, was exceedingly good, and altogether the room presented a cheerful and animated appearance. The presence of some visitors from London, who had come to Yarmouth expressly on purpose to attend the dinner, had undoubtedly increased the attraction. The Thames Angling Preservation Society was represented by Mr. Alfred Nuthall and Mr. W. H. Brougham, and the Gresham Angling Society by Mr. Thomas Crumplen and Mr. Bates, all four gentlemen being members of the latter society. Dr. Mitchell occupied his position as President of the Great Yarmouth Piscatorial Society, Mr. Etheridge that of Vice-President, and Mr. Hewitson as Chairman. There were amongst others present: Messrs. J. Lark, G. Bennett, W. Diver, Bonfellow, Lowrie, Ruddock, Elliott, Lee, Newry, Bly, Corbould, &c., &c. Letters of a very interesting nature, and expressing great regret at their not being able to be present, were read from Mr. Edward Birkbeck, M.P., Mr. Thomas Spreckley, and Mr. R. B. Marston. After every justice had been done to the excellent and praiseworthy dinner, the president, Dr. Mitchell, gave the usual loyal toast in an expressive manner, which was warmly responded to by those present, and followed by the National Anthem. Mr. Bonfellow then proposed the toast of the evening, "Success to the Great Yarmouth Piscatorial Society," and remarked it was the first occasion of a dinner of that kind being given in Yarmouth, and in reality the first club that had ever been started in the town. It was most gratifying to witness the success which had attended the exertions of those connected with it, and he hoped the success would long continue. He had great pleasure in asking them to drink the toast with great enthusiasm, which was accordingly done. Dr. Mitchell, whose name was associated with the toast as president of the society, said they had met together for the purpose of inaugurating the undoubted success of the club, the members of which, by a kind of fraternity and good fellowship, were linked together for the purpose of promoting the interests of angling in the capital of Bloaterland. The society had commenced with three members, and it now numbered fifty-six good and true anglers. This fact alone proves the necessity of such an institution as theirs, and it had become an accomplished fact. It was the desire of his society to assist the preservation societies, and to prevent angling in an illegal manner. They had passed a resolution to inflict a fine on any of their members for bringing into the club-room any unsizeable fish, and to admit the London visitors during the year to become members, entitled to all their privileges at 2s. 6d. each. The society also hoped to get concessions from the railways for their members, and ultimately to rent waters of their own. An attempt had been made to set up a private right in a portion of water that had been publicly fished from time immemorial, and had their funds been strong enough, they would have taken action in the matter by testing the legality of the claim. Dr. Mitchell concluded a thoroughly practical speech by assuring them of his desire to do all he could to make the society even more prosperous. Mr. G. Archard gave the health of the Vice-President, Mr. Etheridge, who was a great supporter of all sports, and just the gentleman for the position he occupied, and whose influence would tend largely to increase the welfare of the society. Mr. Etheridge, in reply, said that although he was not an angler at present, he had fully made up his mind to become one, and by next year he hoped he would have signalised his character as an angler by the exhibition of a large jack. The society had certainly given him a taste for angling and he should cultivate that feeling in the future. Dr. Mitchell proposed in a very telling speech "The Visiting Secretaries from London," coupling the names of Mr. W. H. Brougham and Mr. Thomas Crumplen, both of whom had undertaken a journey of 250 miles to be present that evening. Mr. W. H. Brougham, after congratulating the members on the great success of the society, observed that if the distance to come amongst them had been double it would only have doubly increased his pleasure. He was glad to find the club had resolved upon supporting the preservation societies and in preventing the slaughter of small fish. He had now been twenty-five years connected with the Thames Angling Preservation Society, and his first act was that of checking "the wholesale slaughter of the innocents," that was then carried on to a great extent. He felt a great interest in their club, and he was sure his good friend Mr. Lark would, with his energy and perseverance, maintain the position it already occupied. There was a striking instance of what could be done by the success of the Gresham Angling Society, which, in less than two years, had enrolled over 250 members, and this was due to the activity of their friend Mr. Crumplen. Mr. Thomas Crumplen remarked that it had afforded him great pleasure in coming amongst them on that occasion. He was glad to find the society had taken up the feeling against what was termed private rights. He referred to the Grand International Fisheries Exhibition of last year, and his having been chosen as a member of one of the sub-committees. He hoped that the society at that end, and the London clubs at the other, would use every effort to get the Great Eastern Railway Company to grant three days' privilege tickets for the London anglers to Yarmouth. Mr. W. Diver, in proposing "The Health of the Secretary," said that, in his experience, the success of any society depended upon the activity of the secretary, and it had already proved itself in their case. It was an extraordinary fact that, where so much fishing existed, there had never before this been an angling club formed, and he believed that the existence of angling clubs would make anglers. He was sure they would drink Mr. Lark's health with the greatest cordiality. Mr. Lark made a very telling reply in which he traced out the progress and working of the society, and how he had endeavoured during that period to discharge his duty with every desire to make it an important club in which should be found true and honest anglers, as the real basis of its strength and popularity. It was greatly encouraging to him to see amongst them on that occasion several gentlemen from London, who had come down on purpose to help them. He thanked them very heartily for the kind reception that had been given to the toast. Dr. Mitchell gave the toast of "The Visitors," Mr. Alfred Nuthall and Mr. Bates, whom he thanked most heartily for being present on that occasion. Mr. Alfred Nuthall observed in reply that it had been a source of great pleasure to come amongst them again and to find they were in so successful a position, and he sincerely hoped they would continue to prosper and become a large society. Mr. Bates also expressed much satisfaction in coming from London to be there that evening, and he was sure the society had his best wishes. Mr. Lark proposed "The Bure Preservation Society," and acknowledged the kind help they had received from Messrs. Harmer and Ruddock, the solicitors. In giving the toast he would call upon Mr. Ruddock, who was then present, to respond to it. Mr. Ruddock briefly returned thanks on behalf of his partner and himself. Mr. Crumplen gave the health of the Chairman of the Club, Mr. Hewitson, who he had known for some time, and who was in his experience a good angler and a capital companion, Mr. Hewitson, in a few appropriate remarks, expressed his acknowledgment. Mr. Alfred Nuthall proposed "The Press," coupling with it the name of Mr. Coulson of the *Yarmouth Independent*. Mr. Coulson replied, and said it was always a pleasure to him to report the doings of the Yarmouth Piscatorial Society, and hoped the club would long enjoy its present prosperity. Mr. W. H Brougham, in proposing "The Host and Hostess," remarked he could speak practically upon the character of the dinner, as he was in the habit of attending a few in the course of the year, and he could honestly say he had never sat down to a better. The toast was drank with heartiness. The concluding toast given by the president was "The Ladies," which was replied to by Mr. Bates, whose name was associated therewith. The evening was greatly enlivened by some capital singing by Messrs. Elliott, Bonfellow, Bacon, and Button, and a recitation by Dr. Mitchell. On the following evening the performance at Transfield's Great American Circus was under the patronage of the president, vice-president, and members of the Great Yarmouth Piscatorials Society. The active manager, Mr. Vertie-Courtenay, who is son-in-law to Mr. R. Edon, of the Kensington Museum, gave a first rate entertainment, which was highly applauped by a crowded audience.

B.

A LUMINOUS SHARK.—Several fishes possess the remarkable power of emitting light, but the most interesting of these curious animals is a shark. A specimen captured in Australian waters, when removed into a dark room, presented an extraordinary spectacle. The whole of the under surface of the body and head gave forth a vivid greenish phosphorescent gleam which imparted quite a ghastly appearance to the fish. The luminous aspect was constant, and not increased by the movements of the animal. After the shark expired the strange light gradually disappeared.—From "*Little Folks*" *Magazine* for November.

RIVER REPORTS.

MID-THAMES.

On Friday and Saturday of the past, and Sunday and Monday of the present week, several pretty parcels of roach and perch came to hand at most of the get-at-able and likely stations between Oxford and Staines. The deluge of Tuesday night has again made the water of the proverbial pea-soup consistence. Angling with any degree of success is out of the question in the Thames for many days to come.—MARLOW BUZZ.

Ancholme District.

Owing to the large quantity of water in the river during the past week, but little angling has been done. The eels have been running down very freely, and the finest sport has been had with these slippery gentry bobbing in the punts. Some good fishing is anticipated when the water clears.—THOMAS FORD.

Bure (Norwich).

The floods have, for the chief part of last week, stopped many anglers from trying their luck on this stream. On Friday last Mr. Robert Harvard, jun., of this city, Mr. N. F. Harrison (*alias* "Old Rogeroo"), of the Piscatorial Society, London, and myself were at Horning Ferry. I had previously written Host Thompson instructing him to choose a lee and bait a swim; after a pleasant drive, the morning being fine, we reached our destination about 10 a.m. We rowed to our mooring poles and after trying every bait we had we found gentles were the only temptation, the prize being generally a roach or bream flat of from 2 oz. to 8 oz. At 5 p m we had caught about 160 between us, the majority of which were of course returned to their native element, to afford sport in their more mature age After enjoying a sumputous *tea*, as it is called at this excellent spot, our host informed me of a curious and I believe scarce instance of a pike showing a liking for game Whilst the floods were at their height, the waters surrounded this famous fishing station, the grass plot in front being one of the few places affording footing to outsiders, the landlord observed a covey of partridges alight upon said grass, on opening his door they flew across the river, some dropping into the reeds on the other side and being drowned, others getting safely to some secure spot, whilst one poor unfortunate dropped into the river and was immediately seized and taken under by a large pike. Returning to Norwich by way of Wroxham we called on Host Simpson, Hoveton, King's Head, to hear particulars about the pike which a man in the employ of E. S. Stafford, Esq., The Hall, Wroxham, had picked out of the water near Belaugh. Said pike had struck an eel a yard long, and the eel proved an unfortunate venture, for, in trying to extricate himself, he somehow forced his way up the gill of the pike and consequently both succumbed to the struggle. I might mention that after taking the inside out of the pike he scaled 25 lb., and that the eel being a yard long I should estimate his weight at about 4 lb. ROBERT MOLL.

Camel and Inney (Cornwall).

The river this week is in good condition, and several persons have been trying for large fish. A friend of mine has taken two salmon and several peel since Saturday last. Devon bait and lead minnows are being used more largely at present than anything else. One gentleman had several sorts of minnows, and these, strange to say, he carried in his pocket without any protection. Trout fishing has terminated now for several days.—H. O. PENGELLY.

Chichester.

There has been a marked improvement in the weather the past few days; the wind veering to the north, and bright sunny days resulting. The canal is now in splendid order. Pike are on the feed—several small ones being secured; while perch are giving good sport. Spinning may be indulged in with an amount of pleasure, the water being up and weeds down. In the weekly contest of the C. A. S. Mr. Stokes was for the fourth time successful—carrying off the first prize. In the pike competition for the prize given by the treasurer, Mr. A. Purchase, competitors are limited to one rod; in fact, a rule was passed at a general meeting on Tuesday prohibiting the use of more than one jack rod at any time by members of the club. It has been no uncommon occurrence to see all sorts of apologies for rods to the number of four and five owned by one pot-hunting sportsman—baited and set in a row. Nothing better than trimmering. There will now be some chance for legitimate angling.—GEORGE F. SALTER.

Derwent (Chatsworth).

Owing to the continuous rains, I am not able to give any more favourable report than last week. The water still remains in the same discoloured condition. I think the water is gradually subsiding, but will take some time yet before anglers can have a chance of looking in; so that it is almost useless anticipating how soon it may be again in fine fishable order in this extremely wet and unsettled weather.—WHEATSHEAF HOTEL.

Dove.

Those few anglers who have been out this week have had to provide themselves with the thousand and one little preservatives from cold which an angler knows so well. The weather has been exceptionally unfavourable for angling, the mornings, when not excessively wet, being bitterly cold, with a piercing wind. The river has been in flood during the greater portion of the week, owing to the heavy rain, and sport has therefore been of a limited description. Still, considering the wretched condition of affairs meteorological, one or two decent baskets have been made, barbel having taken the worm pretty freely in some instances. With the waters fined down, I anticipate better sport than we have experienced for some time; but the weather at present does not present a promising aspect.—THE SPLODGER.

Grand Junction Canal (Boxmoor).

Fishing has been out of the question for this last three weeks down here until last Sunday, when the water was more favourable and some very nice jack were taken by Mr. James Lachford off Boxmoor, 4 jack weighing 3 lb. each; and on Monday Mr John Frankland caught 1 jack weighing $4\frac{1}{2}$ lb. The river now is favourable for fishing. I went out this afternon and caught a fine perch weighing 2 lb.—bait, red worm; jack bait, small roach.—R. COMBER.

Ilfracombe.

Sea fishing Friday. Some good sport was had from the Jetty with rod and line. A quantity of mullet was caught weighing about four the pound, and some conger about 10 lb. each. Saturday and Sunday blowing a gale. Monday morning wind abating a little. About six o'clock several boats started, and after drifting two or three hours they hauled three and four maize of herrings each boat. They had a drift again for the high water amidst pouring rain, and caught from 17 to 20 maize of herrings, some fine hake, and whiting. Tuesday all boats out, and some good catches were brought in, when the price fell from 35s. to 20s. the maze. Several hake were caught, some in the nets, others with hand lines. One boat brought up off the Bull fishing for conger; they caught 132 lb. The drum hoisted for a gale. Three of the larger boats ran above Langman and shot their nets. The wind came on to blow a gale. They hauled their nets, and with difficulty got back to harbour with 15 maize of herrings. A man fishing from the tollgate at the pier hooked what he supposed to be a large fish. Judge his astonishment when he hauled up to find he had three large conger tied together. They were supposed to have been left in a boat while the fishermen went to get some refreshment, and by some means got out over, for when they came for their fish they had disappeared. Wednesday, two large skate, one cod 18 lb., and one ling 16 lb. was brought in from a spiller set. Just off the harbour a few lobsters have been brought in from the pots. No fishing to-day. Blowing a gale from W. to W.N.W.—E. COMER.

Lea (Ware).

On Sunday last there was a great influx of anglers here, notably the Bloomsbury Brothers and the Dalston, both of which clubs fished a pegged-down match; but owing to the river having again got thick with the Saturday morning's rain, and to which was added a perfect gale, nothing was done, in fact many anglers returned to London early. The only fish obtained during the week has been from the "Manifold ditch," Mr. Hall, myself, and a few others, favoured with permission, having taken roach and dace in quantities. I should think Mr. H.'s weight for the week would approach something like 40 lb.. Of course, nothing whatever has been done amongst the jack, but should we get little or no rain for a few days the river will then be in excellent order. The floods have taken great quantities of weed away, and no doubt this fact will move "Mr. Jack" to search farther afield for food, and thus give anglers a better chance than has yet been had this season. Thursday night.—Weather fine and beautifully clear; air sharp with little or no wind.—LION AND WHEATSHEAF.

Medway (Tonbridge).

Oh, the rain! The rain it raineth every day, and the result is that the river gets worse and worse. To-day it is as thick as puddle. The barometer is falling, and there is every appearance of more downfall. When we shall be able to angle again is a question which cannot be answered by this deponent.—YE MEDWAY WATER RAT.

Ribble and Hodder.

The rivers have been in nice order for the finishing of the season; but not much sport. A few morts have been taken, and a gentleman staying here caught a salmon 20 lb. weight on Tuesday, and on Wednesday one 6 lb; that was the last this season. —E. DUGDALL.

P.S.—I am sorry we did not send the report last week.

Thames (Oxford).

Angling prospects are again most disheartening; the heavy rains which have fallen in the course of the past week have swollen the river and turned it to a rich pea-soup colour. I find, from the register kept at the Botanical Gardens, which stand on the banks of the Cherwell, about 800 yards from the confluence with the Thames, and for all practical purposes serves to record changes which take place in the height of that stream, that on November 2 the river stood at 4·45 feet, or 183·5 feet; and this morning at 5·25 feet, or 184·12 feet above the mean sea level. Since last night there had been a rise of $5\frac{1}{2}$ inches, and during the week a total increase of upwards of $6\frac{3}{4}$ inches in the depth of the water; and if the rainfall of the past week at Oxford can be taken as a criterion of what they have had in the valleys of the Thames and the Cherwell, we may expect another and a heavier run of flood water to come down within the next few days. The only chances of sport just at present is in the bays and eddy corners of the river, where you may by chance light on a shoal of perch or a jack lies perdu under that brown fringe of rotting sedges, waiting to pounce on the roach or small fry who have been driven from the deep by the sudden rise of the stream to seek the shelter of the banks. A paternoster baited with a worm on the bottom and a minnow on the second hook, is a very deadly method of fishing in such places as I have just mentioned; and, whilst I think of it, I may as well give a hint on the construction of this useful piece of tackle. The specimens sold by the dealers are, as a rule, simple abominations, as useless as they are expensive, and calculated, from the manner in which they are put together, rather to frighten the fish than to induce them to bite. First take a yard of fine natural gut, stained to a brown or sorrel colour, make a loop at each end, next take about three inches of stout sewing cotton, join the two ends, and thread it through the hole in the bullet you use as a sinker, and pass it over the bullet again; join this to the loop in the bottom of the gut, to which should be fixed a No. 7 hook; about nine inches above this tie a standing loop, and bite a split-shot onto the knot to prevent any chance of its slipping; to this affix a No. 8 hook, and if the depth of the water permits an additional one, bound on fine gimp, and baited with a small dace or gudgeon, may be used; if the bullet happens to meet with any obstruction on the bottom the thread will break, and the rest of the tackle come out intact, whereas, if it is fixed to the bottom loop of the gut, the loss of the whole paternoster is the result. For fishing in the floods, either from the edge or from a boat, I go to work as follows:—I use two No. 8 round bent hooks, baited with either a cockspur, brandling, or the tail of a small lobworm, and about a yard of drawn gut, stained for dark water a sorrel or for lighter water a light blue. On to this I bite a No. 6 B B shot to enable me to cast out. As soon as the bait has reached the bottom I tighten the line, and the slightest nibble is perceptible; and if anything, I prefer to use a fly-rod, as from its springy nature a greater stretch of water can be covered; and at intervals I chop up half a dozen worms to throw in, either cockspurs or small lobs, as these keep on the move for a longer space of time than the larger ones, which work into the grass and soon die. When fishing from a boat I always choose the deepest places formed by the hollows of the field, termed in country parlance flams, and by this means I have often secured a good bag, when friends of mine have been unable to obtain scarcely any sport. I remember going to Thrupp, on the Cherwell, one day last season in company with two old fishermen, who thought they knew a thing or two, and who very kindly gave me a lot of advice as to what I ought to do, which, I am afraid to say, I took for what it was worth. They rather ridiculed my light Nottingham tackle, and, thinking they had an innocent to deal with, proposed a shilling sweepstakes for the best catch. I assented, and as soon as they had fairly settled to work, strolled off to a piece of flooded land that rather took my fancy. At the end of the day when I rejoined them I found that their joint catch consisted of about a dozen roach and perch, and to their great disgust I opened my creel and turned out four dozen fine roach and as we were going home I heard one of them say to the other: "I say, Tom, I can't make out how that young devil got hold of that swag of fish." I could have enlightened him; but he knew so much, and had given me such a lot of advice, of which he seemed chock-full and I thought if he knew any more he might probably burst, so for the sake of his wife and children I held my tongue.—CHERWELL OTTER.

P.S.—Mr. Stephen Davies was out on Monday and Tuesday, and secured a few nice perch, and Mr. W. Shirley at Kirklyton (but like a wise man he won't name the exact spot) caught 22 perch, 9 of which averaged from 8 oz. to 1¼ lb., and I should say he had rather a warm time of it, as the whole bag were taken in a hour.

Thames (Richmond).

The river had got in very fair order by Saturday last, when we had some good sport with the roach, which ran a good size; but we were not to enjoy it long, as the rain came down on Monday as if it had not rained for a month, but with a day or two like to-day it will be right again, and we are sure to have some good sport as soon as it gets right. During the past week there have been a good number of punt and bank anglers down. The times that each fisherman have been out during the week with their patrons are:—Kit Brown, five days; E. Brown, four days; H. Wheeler, three days; Francis, two days; H. Howard, one day; Job Brain, three days; John Bushnell, four days.—JOHN BUSHNELL.

Torridge (Torrington).

We have been having rain every day since last writing, in consequence of which the river has been high and foul, and so continues. There is only five days left for the rod and line fishermen, and we cannot expect much more being done this season. The fishing in general has been good; one gentleman has taken in the months of September and October over 60 peel and 2 salmon, besides a quantity of trout. There are plenty of fish in the river and every prospect for good fishing in the spring.—PRACTICAL ANGLER.

Trent.

On account of the flooded state of the river I have only to record another week of piscatorial stagnation. I cannot learn of any anglers being out, neither is it of the slightest use at present. A heavy thunderstorm visited the Midland district last night, and more floods must in consequence follow from the heavy rainfall.—JNO. GREGORY.

Trent (Newark).

Flood, nothing but flood, has been the state of the Trent for a month past; at the time of writing, Thursday night, the river is out of all bounds, and acres of meadow land under water; like Othello, our occupation's gone, we can only ruefully view the waste of waters, and wonder when we shall have a chance to wet a line. One thing these floods will do, that is, they will clean out the bed of the river, sweep away all rubbish, and pack the fish into their winter quarters. When the river does get into condition, I anticipate some good sport; there is no chance yet. We can only wait and hope for the good time coming.—THE TRENT OTTER.

Witham (Boston).

Some parts of Lincolnshire have been visited again by heavy rains, and, as a consequence, the streams and watercourses have been much swollen, especially the Witham. Almost directly after my last report the waters had sunk sufficiently to allow of operations being resumed in favourable places, and this went on until Tuesday, when heavy rain again put a stop to everything. On Friday some fish were caught, chiefly roach, and the red worm was found the most killing. Saturday's operations were scarcely satisfactory; still about twenty members of the Royal George Angling Club turned out for their last match. This was on the Bargate drain, and about half returned fishless, the others also doing badly. The best roach take I have heard of is fifty-nine fish by Mr. Cross, on the Aqueduct water, on Friday. The pike fishers did not venture out till Monday. At Cherry Corner, one of 5 lb. was taken, several at Eastville, and some also on the Mount drain. If present weather continues the smaller streams will be in condition by Saturday next.—THE YELLOW BELLY.

Wye and Derwent.

Both the Wye and Derwent have been bank-full the whole of the past week, and there has been scarcely any angling done worth recording; in fact, there have been but very few places where the bottom fishers could fish, owing to so much water running down the Derwent the whole of the week. Both yesterday and to-day (Thursday) there has been some good samples of grayling and roach killed, with brandling worms for bait, the fish biting the best in water from 2 to 3 feet deep; and baskets from four to six brace per angler have been made. There will be no fly fishing in these rivers for another week. Weather still very unsettled.—GEORGE JAMES PATON.

Yare (Norwich).

Brundall is the only station where I have heard of anything doing, Mr. Robert Harvard, jun., and "The Old Rogeroo" (referred to in the Bure report), had very fair sport here on Thursday, landing about a stone of fair size roach. On Monday last, Hubbard, of Sprowston, hired a boat at Messrs. H. Flowers and Co., the Yare Hotel, Brundall, and he was fortunate enough to secure 117 fine fish, the thirteen largest bream weighing 31 lb. 2 oz. I have heard of no jack being taken—I suppose the water is too thick, and at the time I write it has risen again though the tide is rushing out here; I cannot predict much sport of any kind unless the weather settles and the waters fall considerably. It is worth noting that Hubbard caught most of his fish in comparatively shallow water.—ROBERT MOLL.

Yore (Hawes).

Several freshes this week. River now full of snow broth. Only heard of one decent dish being made this week. Grayling, when water is suitable, fairly well on the feed; red and brandling worms being the best bait. I hear of no one trying the maggot; in fact they are not procurable here. I wish some of your readers would oblige me with a few to try.—J. CORNY.

South of Ireland.

THE SHANNON FISHERIES.

The rivers in the South of Ireland, especially the Lee and Blackwater and their respective tributaries, have been swollen by the late rains. The weather continues wild and cold, with occasional sleet and rain, which makes outside work most uncomfortable. In fact, the winter has set in upon this latitude suddenly, and with its worst phases. However, these characteristics are quite favourable for piscatorial life, and the salmon and sea trout have been able to reach the gravel beds of the small streams, which they show a decided preference for as depositing places for their ova. During the last flood a large number of winter fish were seen ascending the weirs, and this is a hopeful sign. The springers have not yet commenced to run, but I have no doubt that an occasional one may be found with the shoals of spawning salmon that are moving up. The annual meeting of the Fishery Conservators of the Shannon was held last week in Limerick. It was the meeting of the new board, and it was apparent, from the report of the inspector, that even the lordly Shannon has not been free from the arts of the poacher. In fact, it was stated that an alarming system of poaching was pursued in the upper waters—a system defying and baffling the ordinary resources of the Conservators. The poaching was carried on with nets in the favourite fishing pools on this magnificent river. The inspector admitted there were not sufficient bailiffs to cope with this abnormal state of things. Then, again, the complaint arises that the revenue of the Board will not afford a sufficient staff. Modern appliances can be made very effective for the destruction of fish, and where the value of the article and loose preservation are the incentives to poaching, it is no wonder it has become developed into a science. The Shannon and the Blackwater want anglers' clubs to initiate a movement to counteract poaching, as they did in the Lee; but the riparian proprietors on these rivers appear too conservative of their rights to give even one open day in the week to a body of gentlemen who would return the privilege with four-fold advantage to the fishing interests. In the absence of an anglers' club, who would tax themselves, the question arises, How is an increased revenue to be derived in order to carry on preservation in a proper way? The only legitimate answer is to tax the trout anglers with a licence, or to open up the question of taxing fisheries according to their defined valuations. The latter point has been under consideration, and I believe the inspectors themselves would be favourable to a general scheme of that kind. It seems a very feasible plan, and a short time ago the proprietors in the Lee consented to a voluntary contribution in proportion to the value of their preserves, to meet a sudden emergency.—ANGLERS' CLUB.

CLUB REPORTS.

AMICABLE BROTHERS' ANGLING SOCIETY.

Nineteen members fished in the pegged-down match at the Springwell Fishery, Mr. Farebrother coming in first with one roach, and Mr. F. Plumsted taking second honours with one dace. The match will be continued next Sunday at the water above the Blackpool to St. Margaret's Bridge for the remaining seven prizes. Mr. Arnold had a nice show of roach weighing 7 lb. 13½ oz., Mr Partrick 2 lb. 11½ oz., Mr. Howlett dace 7 oz. Wednesday, Nov. 15, is quarterly night, and the end of the season, but fish are weighed into the club up to the last Sunday in the month.—J. WORLEDGE.

Nov. 5.

ANGLERS' BENEVOLENT SOCIETY.

Since my last report, I beg to acknowledge with thanks the receipt of 10s. donation from M. Snook, Good Intent Angling Society.—R. GHURNEY, sec

Nov. 8.

BERMONDSEY BROTHERS ANGLING CLUB.

The members of this club fished for prizes last Sunday, but the takes were small; Messrs. Owles and Conn being successful. The members go in for their peg-down half-yearly feed early in December. The date will be duly announced.—A. G. CROKER, sec.

COBDEN ANGLING SOCIETY.

The above society fished their fifth match of the season on Sunday last at West Drayton; there were four prizes contested for, the result being: Mr. Weeks, 1; Evans, 2; Giles, 3; Hammens, 4.—C. REEVES, sec.

EDEN PISCATORIAL SOCIETY.

I am instructed by the members of the Brunswick Piscatorial Society, who met on the first day of November, that the majority have resolved to form themselves into a new club, to be known as the Eden Piscatorial Society, and in future the meetings will be held at the "Queen's Head," Amelia Street, Walworth Road, on Wednesdays and Sundays, at eight o'clock.—GEO. S. COPELAND, Hon. Sec.

GOOD INTENT ANGLING SOCIETY.

There was a capital show of fish brought in the club on October 29, from the Lea. George Bates, 12 lb. of good roach, winning the monthly prize of £1 1s., beating H. Snook by 1 oz. There were more fish brought in last Sunday than we could have expected, the wind blowing a gale all day. There are three prizes for this month for roach only, and will cause a keen contest. Mr. H. Brookwell, fishing in the Kennett, took seventeen fish weighing over 20 lb.—R. MURPHY.

GREAT GRIMSBY ANGLING ASSOCIATION ANNUAL DINNER.

The first annual dinner of the above Association took place on Tuesday evening last, in the large club room of the Association, at the Masons' Arms Hotel. The dinner provided by the host, Mr. Hollingsworth, was an excellent one in every respect, and not the slightest fault could be found with the viands or the attendance. The room is one of the best and most conveniently fitted up apartments in the town, and ample accommodation is provided to dine a large number at one sitting. There are over sixty members in the club, and those present numbered about forty.

GRESHAM ANGLING SOCIETY.

"The Gresham" had a full meeting on Tuesday last, when Mr. A. W. Parker read his paper on "An Anglers' Parliament," Edwin Frost, Esq., in the chair. Mr. Parker, in the course of an exhaustive paper, traced the growth of the Parliament of England from the Conquest, and gave much information relative to the Thames Conservancy and other kindred bodies, which was greatly appreciated. He concluded by reading an imaginary extract from the FISHING GAZETTE of 1883, recording the assembling of an Anglers' Parliament in London, with its president, wardens, and other officials, each having district duties, who, with representatives from London and the provinces, were to be elected much on the model of our House of Commons, and in whose hands the entire affairs of the angling world were to be legally placed. Mr. Parker incidentally traced the origin of the three "Central" Associations, claiming for Mr. R. Ghurney the honour of being "The Father" of them. Mr. Crumplen, in opening the discussion, reminded visitors that in all cases readers or lecturers only gave their individual opinions, not the collective opinion of the society. In this instance they had certainly listened to an extraordinary paper, one in which great labour and research had been involved, and from which valuable information was to be derived. He thought the theory rather visionary, and not at all practical in the present condition of the angling world. Unity was most desirable, and in time sure to come; but the only way to bring it about, was for all classes of anglers to know more of each other, and to sink the petty jealousies which too often kept them apart. The chairman, Mr. Bates, Mr. Hill, Mr. Field, Mr. Godwin, Mr. Christie, Mr. Jardine, Mr. Wheeldon, Dr. Brunton, Mr. Ghurney, and other gentlemen having spoken, pro and con., Mr. Crumplen moved a hearty vote of thanks to Mr. Parker, which was seconded by Dr. Brunton, and to which Mr. Parker made a suitable reply. The interest of the meeting was materially increased by the arrival of Dr. Brunton with a superb tray of grayling, which were placed before the chairman previous to the discussion on Mr. Parker's paper. Six of these weighed fully 8 lb. in all, the largest going 1 lb. 14 oz., and formed part of a take of between fifty and sixty brace, which in less than four hours' fishing fell to the Doctor's rod, and the great majority of which he returned to the river. The whole of them were taken on the finest drawn gut, with one of those small flies known to the initiated as "Dr. Brunton's own," which, on this occasion, was kindly handed round for inspection. In response to a unanimous vote of thanks, Dr. Brunton expressed the pleasure with which he entered the society's new meeting-room at Masons' Hall Tavern, and congratulated the members on the success of the evening; no doubt aided by the important change they had made. Mr. Edward Bennett, of Great Yarmouth, has again been successful with the pike at Ormesby Broad, having taken several fine fish, 23 lb. in all, the largest going close on 9 lb. Mr. Bennett's pike were all taken in public water with snap tackle and fine gut. At the close of ordinary business on Tuesday evening, the members indulged in the harmony that characterises a "Gresham" meeting, Mr. Crumplen occupying the chair. Some excellent solos were given, Mr. Wheeldon singing Dibdin's "Tom Tough" and "The Wolf" in even more than his usual able manner. Mr. Johnson, Mr. Moor, Mr. Young, Mr. Cartwright, Mr. Jardine, Mr. Callaghan, and other gentlemen sang, Mr. Harding reciting his well-known "Serjeant Buzfuz," an equally acceptable recitation being given by one of the visitors. After "Auld Lang Syne" by Dr. Brunton, the National Anthem brought the proceedings to a close.

GRESHAM ANGLING SOCIETY.

NOTICE OF SPECIAL MEETING.

Notice is hereby given that a special meeting of the Society will be held at Masons' Hall Tavern, Masons' Avenue, Basinghall Street, E.C., on Tuesday, November 21st, at 7 pm. Resolutions will be submitted at such meeting authorising the committee to purchase a bookcase for the library, and placing at their disposal such sum of money as may be needful for that purpose. The prizes for the past year will also be formally distributed at this meeting, and the committee hope to see a large attendance on such an important occasion. Members are reminded of Dr. Brunton's paper on "The Special Senses of Fishes" on Tuesday, December 5th.—T. CRUMPLEN, hon. sec.

HUGH MYDDLETON ANGLING SOCIETY.

The members of the above society will fish for a series of prizes on Sunday, the 12th of November, at the Rye House Waters—all fish to weigh according to the Lea rules. The report of the pistol will be the signal to start. The fish to be weighed in at the Rye House at four o'clock. After fifteen minutes past four no fish will be weighed to a member's account. The members will afterwards make tracks for the interior of the Rye House and partake of their annual dinner. Our worthy hostess (Mrs. Teale) has promised to place a spread before us that will delight the eyes and please the stomach of the most hungry angler.—J. CABORN, sec.

Nov. 6.

LITTLE INDEPENDENT ANGLING SOCIETY.

The members of the above were out last Sunday. The waters were not in proper condition, but some returned with capital sport. The following members weighed in:—Mr. Hurwood had a fine show of roach and perch; Mr. Scott also had a fine show of roach, perch, and jack; Mr. Petrie, fine roach; Mr. Keene, jack.—W. H. EVANS, sec.

Nov. 8.

NORTH-WESTERN ANGLING CLUB.

On the 1st inst., Mr. Hillier weighed in a good jack 10 lb. 14 oz., also on the 5th inst., roach; Messrs. Harris, Billings, and Stead also roach; Messrs. Marshall and Hill perch.—H.

Nov. 9.

PRINCESS OF WALES ANGLING SOCIETY.

IMPORTANT NOTICE.

The committee beg to state that in consequence of so few having entered for the competition for the marble clock, they have decided upon postponing it until the 14th of January, 1883. They have also decided that the competition will not take place on that date unless at least 100 enter for it. All overplus will be given in money prizes.—H. ROBSON, chairman.

RICHMOND PISCATORIAL SOCIETY.

At the meeting on Wednesday last, Mr. J. P. Wheeldon, according to previous notice, kindly attended to give a lecture on "The Practice of Ancient and Modern Pike Fishing." The name of this gentleman was sufficient to fill the large room of the society to overflow, and as the members and visitors filed in, their expectations were heightened by an addition supporting the chairman on the right in the shape of Mr. Jardine, who, at great personal inconvenience had consented at the last moment to go down to Richmond at the request of the chairman. It would be impossible here to detail the lecture; but it was the universal hope that it would reappear again at Richmond amongst the many valuable papers of the society as a pamphlet. Taking the members back a century in ancient fishing, Mr. Wheeldon carefully led them on and on, step by step, to the present period, showing as he went the improvement in tackle, explaining the various processes, giving his personal experiences, his opinion of various methods of casting, &c., and dwelling on every subject in connection with pike fishing, including baits, gimps, traces, swivels, flights, snap-tackle, rods, lines, hooks, &c.; each and every one did Mr. Wheeldon so thoroughly and efficiently explain that it could not but have been well understood by all present. The lecture was greatly augmented by the essay of Mr. Jardine, whose experiences as a pike fisher need no comment. This gentleman's idea of the secret of taking large fish is by having the bait proportionately large: this he stated from his own personal experience, which Mr. Wheeldon had previously touched on and fully endorsed. Mr. Jardine also gave instances of pike to be seen at the present time weighing when taken 85, 56, 37, 36, 34 lb., &c., &c., and, in his opinion, equally large ones were still to be found, although they required some very great dexterity and patience to find and capture them. As time pressed unfortunately, Mr. Jardine was prevented giving details, which he had fully intended doing, at a greater length, but expressed his delight at being for the first time amongst the members of the Richmond Piscatorial Society. A very hearty vote of thanks was accorded Messrs. Wheeldon and Jardine for the kind and instructive information they had imparted that evening, which was duly responded to. The chairman announced that Mr. Wootton, of Isleworth, had been elected on the Thames Angling Preservation Society, making the fourth election of a member of the Richmond Piscatorial Society; also that no reward would in future be given anyone for trout taken out of season, which, according to the Act, were to be returned to the water immediately. The competition for Messrs. Little and Co.'s prize will take place on the 15th inst, particulars of which have been duly published. There were present at the meeting:—Mr. F. C Clench, chairman; Mr. H. Dickinson, vice-chairman; Mr. Gaynor, curator; Messrs. A. J. Little, G. Hester, J. Wootton, W. Abbott, Wilson, Eydmann, Downs, Percival, R. B. Matthews, Harwood, Hayward, W. Johnson, Bingley, Field, Neville, H. Davis, Powell, Taman, Heasler, Terrill, F. A. Crew, Griffiths, J. R. Matthews, H. S. Giles; visitors: Messrs. Wheeldon, Jardine, Hudson, S. W. Wilson, J. Cockburn, &c., &c.—J. H. GAUNT, hon. sec.

ROYAL GEORGE ANGLING SOCIETY.

There is not much to report this week, for although most of the members have taken fish, no one has been fortunate enough to make a really good basket. Mr. Hughes had a barbel of $1\frac{1}{2}$ lb., and a dace of 6 oz.; and Mr. Guynan had a dozen very nice dace from Richmond. Seeing that your valued correspondent "The Trent Otter" has been attracted by Mr. Chub Chavender's ground bait, I should like to recommend him a composition which I believe he would find quite as useful. It is an invention of Mons. Charras, the medical adviser of Louis XIV., and is to be rubbed on the bait and about 9 inches of line immediately before fishing. This is it:—Take two drachms each of cat's fat, heron's fat, assafœtida and powdered mummy; then two scruples of crushed cummin seed, add to this one drachm each of camphor, galbanum, and Venice turpentine, and two grains of civet. Make this into a thinnish paste with the oils of lavender, aniseed, and camomile, and keep it in a gallipot; tied down with a bladder and leather for two years. For my own part, if I got as far as the tying down business, I should wait more than two years before I used it.—C. W. W. BERNHART, hon. sec.

THE PISCATORIAL SOCIETY.

The annual perch-fishing competition in the Thames in connection with this society took place on Monday last. There were about forty members present to witness the return of the competitors in the evening at Ashley's Hotel, Covent Garden, Mr. F. G. Pearce in the chair. In spite of the flooded state of the river many members competed for the above, with good success as far as numbers went, but few fish reached the standard of 8 oz., and had to be returned to the water again, one member alone catching five dozen and not one reaching the desired weight. Mr. E. Foreman won the first prize of three guineas with eight fish, weighing 5 lb. $5\frac{1}{2}$ oz., piloted by Andrews and taken at Clevedon; Mr. C. P. Wheatstone took the second prize of two guineas with one perch, 1 lb. 7 oz., caught at Maple Durham, and also his own prize of one guinea for the largest fish. Mr. T. Huggett showed one perch of $8\frac{1}{2}$ oz. and two roach, 14 oz.; Mr. Shipway, one perch of $10\frac{1}{4}$ oz., and a roach of 12 oz. The pike competition takes place on Monday, November 20, from public waters, and also the second prize of the Shentonian competition, which was not won, and will be competed for from the Thames only. The first smoking concert will take place on Monday, December 11, and from the numerous offers of assistance promises to be, as usual, a great success.—B.

TRAFALGAR ANGLING SOCIETY.

The members of this society who were out on Sunday last did not get much sport, owing, no doubt, to the strong wind and thick water; Mr. Morriss and J. Gaze, fishing with red worms at Henley-on-Thames, being the only members with fish. J. Gaze, roach and perch, 3 lb. 15 oz.; Mr. Morriss, roach, 1 lb. $11\frac{1}{4}$ oz. A pegged-down match will be fished at Burnt Mill on Sunday next, the 12th, in the Stort. Members going must not forget the only train starts from Liverpool Street at 8 o'clock.—J. GAZE, sec.

Nov. 6.

UNITED BROTHERS, DEPTFORD.

On Sunday next, the 12th, the members of this society will fish a peg-down match, at Ponder's End, for four prizes. The train will leave Liverpool Street Station at 9.15 a.m. If this should meet the eye of Mr. John Eller, late of Tonbridge, now staying at Kingston-on-Thames, will he be so kind as to send his address, &c.?—JUMBO.

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invite Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sen or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

WORMS IN A COLLEY.—"Rhiwlas, Bala, North Wales, Sept. 21, 1874.—I gave 'Naldire's Powder' to a colley on Saturday last, and in ten minutes he evacuated a tapeworm 30 yards 2 feet in length. I consider the Powder effectual.—R. Lloyd Price." "Naldire's Powders" are also a splendid alterative, keeping dogs in excellent condition. Price 1s., 2s., 3s. 6d., and 5s., of all Chemists, and of Barclay and Sons, 95, Farringdon Street, London.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

CRUMPLEN TESTIMONIAL.

SIR,—I beg to inform you that the presentation of this testimonial will take place at the Gresham Society's room, Masons' Hall Avenue, Coleman Street, E.C., on Tuesday, 21st November, at seven p m., and as the list of subscriptions must necessarily close by 14th instant, I shall feel grateful to those members who have not yet forwarded their contributions if they will kindly do so at once.—I am, &c , CHARLES BATES, Hon. Sec. to the Fund.

27, Commercial Sale Rooms, Mincing Lane, E.C.,
November 8th, 1882.

THE BLACK BASS.

SIR,—As I had the honour of joining in the late venture of Mr. W. T. Silk's, and the pleasure of presenting my share of the bass to our Wintersett Anglers' Club, and should like there to be no doubt as to the credentials of the fish, may I ask you to add my name to the list already published—say in next Saturday's GAZETTE?—I am, &c., JONATHAN HAIGH.

Saint John's, Wakefield, Nov. 5.

[We must apologise to Mr. Haigh for unintentionally omitting his name.—Ed.]

THAMES FISHING.

SIR,—At the inaugural dinner of the Great Yarmouth Piscatorial Society, one of the speakers in referring to the extent of fishing water in the neighbourhood of Yarmouth made what I consider an uncalled for attack on the river Thames, which, he first of all said was not able to hold a candle to their rivers and broads. There could be no doubt as to this fact from the extent of their fish farms, and which are not fished anything like our Metropolitan river; but when he referred to a visit of his to Teddington and describing the fish taken there of a size they would be ashamed to catch in that neighbourhood, the remark came with very bad taste, when he knew there were gentlemen present connected with the Thames Angling Preservation Society who had come from London expressly on purpose to support their movements. All Thames anglers know that through the improved condition of the river the fish do not go to the head of the tide as formerly, and roach and dace are not to be found at Teddington in the quantities they used to be. I frequently examine the punts in that neighbourhood, and in justice to the fishermen and anglers I never find unsizeable fish in their wells, except a few they are permitted to retain as bait. If he had gone down to Twickenham he would have found greater quantities of fish, as they have been taking up to 40 and 50 lb. weight of roach and dace in the day. Mr. Alfred Nuthall could have told him of his extraordinary takes of barbel this season, and I could have mentioned others, but did not deem it necessary to take a defensive position in so social a gathering.—I am, &c , B.

NETTING THE ASSOCIATION'S WATERS.

SIR,—L. B. thinks it is pitiful that anglers should write such letters as the one I wrote under the above heading, and says that it does not contain a title of evidence to justify the heading, and in the next few lines of his letter, he himself justifies it by saying "that this canal is netted is a generally admitted fact"—and as we know, it is also a fact that the association rent a portion of this water, what else is it but netting the association's waters? It is ridiculous for L. B. to say that I give no evidence to justify the heading, and then immediately give the evidence himself.

Mr. Hoole (who I am very sorry to hear is laid up, and hope he will have recovered ere this is in print) said that my letter was the first he had heard of the water being netted; how is this Mr. L. B.? You say that it is a generally admitted fact that the water is netted; Mr. Hoole did not know it, and you blame me for telling him, and others who may not know it. It looks as if you wish to keep it as secret as possible. Surely the best thing to do is to make the fact of netting known, and I am quite sure all true anglers will assist Mr. Hoole and the keepers in preventing it. I can answer for myself, and as I intend paying this water a visit very shortly, you may depend I shall keep my eye on the tail-end of the barges as well as upon the natives with the show nets, and if I see anything wrong, you ask me to take immediate steps to have it set right, What do you mean, the nets? I should most decidedly take steps to have them set wrong, or, you say, telegraph to Mr. Hoole; then you don't think that would be pitiful? Kindly allow me to use that word of yours. I wish to say it is pitiful you do not read and understand properly a letter written in plain English; you infer that my letter is practically a serious charge against those who are striving to do their utmost for their brother anglers; this interpretation is simply absurd, the report I gave I distinctly stated was entirely hearsay, and cannot be construed into a charge against anybody, except poachers, for the impression conveyed to me was, that there were no keepers; you also say that my letter is calculated to encourage poachers; on the contrary, publicity is more likely to discourage poachers than secrecy, which you prefer, else why did not Mr. Hoole know it? Mr. Hoole received my letter in a proper spirit, and I am very pleased that he is taking such efficient means for protecting the water, by having bills posted, offering rewards for the capture of poachers. You suggest that I am not disposed to give Mr. Hoole reasonable time to carry out the means he speaks of by saying "If I will give reasonable time." Now you must have known that I was not aware of these means being taken, from the very fact of my writing the letter, neither was I aware of any keepers, as I have before stated, therefore I could not have had any wish to discourage them.

Yes, I do admit I have never seen the water; but what has that to do with it? Only this, it shows that I study the interests of anglers generally in making a report without delay (which now appears to be well founded) for the purpose of assisting Mr. Hoole and keepers in their good work, by telling them that which they may not know, and I can only hope that my brother anglers will not be deterred by L. B.'s pitiful reply to my letter (am sorry to have to borrow that word again, L. B.) which was not addressed to him, but to Mr. Hoole, who gave a most satisfactory reply.—I am, &c., THE RED FISHERMAN.

POACHING IN THE STORT.

SIR,—Whilst shooting at Roydon last week I passed by the river Stort, and was more than astonished to see four or five hulking men dragging the river with a net, one man up to his neck in water walking with the line of the net on the opposite side. I watched them draw the net four times, with the following result:—Eleven jack, the heaviest about $2\frac{1}{2}$ lb., the smallest about 1 lb.; three or four dozen very small perch, which were thrown away on the grass to die; and about five dozen fair-sized roach, one at least 1 lb. I found on enquiry that they frequently indulged in this sport.

I used to fish the river some five years ago, and almost invariably had good takes of roach; but finding after a time I could get very few I abandoned the spot for other grounds, wondering how it was. There is now no cause for astonishment. Surely something can be done to stop such an abominable practice. It was no use one person speaking to such a set of blackguards, as he would in all probability find himself where the fish ought to be. This happened, too, right opposite the lock-keeper's house.—I am, &c ,

E. W. A.

[The only thing to be done is to form a protection society, and get the right from the landowners to prosecute poachers.—ED.]

THE LANDING NET.

SIR,—You have lately inserted letters *re* "The Fisherman's Curse." Will you kindly let me ask in your columns for advice as to the best arrangement by which to reduce to a minimum the fisherman's encumbrance, in the shape of a landing net?—I am, &c., X. Y. Z.

[Dr. Brunton would probably say "Do without it;" but we do not agree with our worthy friend on this matter, holding that a landing net of some kind, although not absolutely necessary as a means of securing the fish, effects such a vast saving in time and bother after the fish is practically beaten that it should always be used. How to "reduce the encumbrance to a minimum" when fly-fishing has been a query with us for years, and except in rivers, where the wading is very dangerous, we now adopt the following plan:—To a 2-foot ash handle $\frac{3}{4}$ inch in diameter is whipped an oval ash ring, and the net is fastened on by means of holes at intervals in the ash ring. The net looks very much like a lawn tennis racquet in a consumption—very thin and light, but in general shape the same. This net weighs next to nothing, and is carried either by pushing the handle into a leather loop at the back of the basket, and it is then held in place between the back and the basket—or a better plan is to have a leather holder (like a coachman's whip-holder) fastened conveniently on the front side of the basket. With this latter plan all inconvenience from the net handle catching in one's legs is done away with; of course the handle slips through the holder up to the net, and can be pulled out and replaced in a second.—ED]

DOUBLE-HANDED FLY RODS.

SIR,—Having fished the portion of the Test which you, Mr. Editor, lately described, I beg to inform "Yorks" that, although some of the members use double-handed rods, others, again, have only single-handed rods, some even have a big rod carried by the attendant, who also carries net and basket. I, owing to a weak right arm, use a double-handed rod, as, the weight being distributed on both the arms, I find it much less tiresome than a single-handed trout rod, however light it may be. Does "Yorks" mean by the word "managed" that although the cast is made, it is so long that the angler cannot strike a rise properly? I find that I can throw only 16 yards with an 11-foot single-handed rod, but, with a double-handed rod, 20 yards is not so difficult; again, in dry-fly fishing, a long rod enables the line to avoid those ripples and swirls of water which are in mid-stream and towards your own bank, and which bellies your line, causing your fly to drag in an unnatural manner. As to carrying one's own net, this is usually done when alone in Hampshire by means of a patent lock-over fastening, which, I believe, John Hammond, of Winchester, introduced some years ago; it is somewhat similar to the landing net, of which an illustration is given in Dr Foster's "Scientific Angler." This fastening causes the net portion of the landing handle to hang down by the angler's side, it usually being attached to the strap of bag or basket by means of a hook or catch of some sort. A few years ago, in the month of July, during a week's fishing, I landed on the Test, in bright sunny weather chiefly, 13 grayling, weighing about $20\frac{1}{4}$ lb., using a double-handed rod, two lower joints bamboo, and the top greenheart or lancewood, made by the late James Ogden, of Cheltenham, and similar to one described by Mr. Francis in his excellent book on angling. As far as my memory serves me, I only lost one grayling after hooking it, and this was in a sharpish stream, and when I was alone, though I landed all but one or two at the outside by myself. Seven or eight were taken between the hut just above the Sheepbridge, or below, say a distance of 300 yards. You, Mr. Editor, will doubtless remember that the stream was rather fast at the above-mentioned spot. The flies used were small ones, about Nos. 14 to 16 Limerick, with turned out points, except for the last fish, which was my best one, weighing $2\frac{1}{4}$ lb. by my steelyard It took a large fly with woodcock wings, rough body and red hackle ribbed up it, and wisks of the same colour. Could "Yorks," or any other of your correspondents, kindly inform me where I could obtain a day's grayling fishing near Hull, and not be absent from business more than one day. The club on the Derwent, near Scarborough, I am told, do not issue day tickets after 30th September. I should add that my "Angler's Diary" is not to be got at, or I should not ask the above question.—I am, &c., J. B. J.

Hull.

P.S.—I also caught a few undersized grayling and some trout, three of which were killable.

TACKLE MAKING QUERIES.

SIR,—I think "Bittern" will find that Mr. H. S. Hall describes his way of dressing flies on eyed hooks in a back number of the FISHING GAZETTE.

I have got a cutting from the *Field* where he also describes his process, but cannot at the moment refer to it. If "Bittern" desires, I will endeavour to furnish him with a copy. I believe that most of the London fishing tackle makers sell woods suitable for rod making, but do not personally know the prices.

Bittern feathers are not easy to be obtained. One might, however, be picked up in Leadenhall Market, but would cost 7s. or 10s. I fancy. If "Bittern" wants the feathers for making the May-fly or green drake's legs I could give him a few of a good substitute easier to be procured, and being not so long, makes the fly look more natural.

Blue Andalusian feathers are useful in fly-making, but the blue dun (a species of game fowl) produce the best natural feathers of that shade. They vary greatly, being blue duns, honey duns, &c. If "Bittern" has any blue Andalusian feathers to spare, I should be glad to exchange with him. I want some of all sizes, from 3 or 4 inches down to the smallest used in fly tying.

Do you, Mr. Editor, or any of your readers know where one could obtain feathers for fly-tying beyond what the London tackle makers have for sale?

Any information on this subject will much oblige.—I am, &c.,

Hull. J. B. J.

P.S.—The feathers I most want are the different shades of the dun fowls.

RINGS FOR SPINNING RODS.

SIR,—May I ask you, through the FISHING GAZETTE, whether there are any rings made which would decrease the friction of the line, &c., in a pike rod? If so, where may they be obtained.—I am, &c.,

LE BROCHET.

[We have before referred to a combination ring, which consists of a brass ring-holder and a revolving steel centre ring. It answers admirably, and can be obtained at most tackle shops.—ED.]

FLY DRESSING QUERIES, &c.

SIR,—In reply to "Bittern's" queries, I beg to inform him that the hackles of Andalusian fowls are the best for fly dressing, as, if not the exact colour, they can be dyed with Indian dyes to match or make any shade of tint.

He can obtain bittern feathers from O. Handlen and Co., 48, Victoria Street, Bristol, also the various woods for rod making or repairing, also ferrules, winch fittings, &c., and I have no doubt that if "Bittern" will ask H. S. Hall, Esq., he will give the *modus operandi* for trying flies on his justly celebrated eyed hooks.—I am, &c. R. D. FROST.

Forsyth's Hotel, Aberdeen, Nov. 6, 1882.

RECIPE FOR WATERPROOFING CLOTH, &c.

SIR,—Here is a recipe similar to that lost by "Watchet," probably the weaker solution mentioned is that already tried by him. The recipe is taken from "Facts and Hints Relating to Fishing and Shooting," as follows: "A solution of sugar of lead and alum. Proportion used: 1 lb. sugar of lead, 1 lb. alum; two quarts of boiling water to be poured on the lead and alum pounded, A weak solution might answer. This will make any cloth waterproof.

It is now six years ago this month that I asked the same question so lately raised by "Mark Antony" in the FISHING GAZETTE as to the distinguishing points in the sex of the pike. As you may guess I was not a little interested in the repeating of the question, and I certainly did not think the answer would be so quickly given. I, like "Mark Antony," had an argument upon the subject, and I may say I had determined in like manner to Mr. Jardine, yourself, and the "Trent Otter," having observed as the latter, that the head of the male was much longer.—I am, &c. G.W.K.

Busbridge, November 6, 1882

RECIPE FOR WATERPROOFING.

SIR,—The following recipe is taken from the *Field*, and I trust is what "Watchet" requires:—

For waterproofing cloth take half a pound of sugar of lead and half a pound of alum, and dissolve in a bucket of soft water; stir thoroughly half-a-dozen times at intervals, during which it may be allowed to settle. When quite clear, pour it off (without disturbing the sediment), and soak the coat or other article in the liquid for twenty-four hours; then hang it up, and let it drip dry.—I am, &c., W. P. H.

November 6, 1882

COARSE FISH FOR STOCKING WATERS—FEATHERS FOR FLY-TYING.

SIR.—"Bittern" will be able to get the feathers he requires from any naturalist. T. E. Gunn, of Upper St. Giles Street, Norwich, would no doubt be likely to have some. I can supply live roach, dace, gudgeon, and pike in any quantity. See my advertisement.—I am, &c., S. HOWARTH.

13, Station Street, Burton-on-Trent.

[Mr. Howarth makes very good flies; he sent us some samples of capital midge flies.—ED]

THE MANCHESTER AND DISTRICTS AMALGAMATED ANGLERS' ASSOCIATION.

SIR,—In answer to your correspondent "Trout," in your issue of Saturday last, I beg to point out to him again the resolution passed by the members of our society respecting the fishing for salmon trout, char, and grayling. This resolution is dated April 22, 1882.

His having forwarded our rules to you does not alter the facts of the case, and as the assertion, "That our rules allow our members to fish for and weigh-in for prizes the before-mentioned class of fish during close season, or all the year round," is amply disproved to any reasonable person, we shall decline to continue the correspondence, or answer any questions that do not bear on the point at issue.

Our club has managed to conduct its own affairs for over fifty years, and we must resent any interference from your anonymous correspondent "Trout."

If he has any complaint to make, and is a member of the Amalgamated Association, as he asserts, he is at liberty to instruct his delegate representing his club at their meetings, and our delegate will be prepared to meet him.—I am, &c., W. ASHWORTH.

Salford Friendly Anglers' Society.

A "JACK" INCIDENT.

SIR,—In a small aquarium belonging to Mr W. Jones, our treasurer, is a jack weighing about ¾ lb., which Mr. Jones caught in Knowsley Lake (Lord Derby's), and which he is in the habit of feeding by giving it a small live roach from another aquarium close by. This feeding business is quite an interesting affair to our worthy treasurer and a few select cronies on a Sunday evening, and the operation of "pouching" is watched and commented on in a very learned manner. If master jack does not at once go for the poor frightened, helpless roach, various wise reasons are given by the absorbed bystanders, such as "He is not well;" "What is the matter?" "He must be hungry;" "Oh, it is your ugly face prevents him enjoying his meal," and so forth, to account for his abstinence. On one occasion, however, the young cannibal at once tucked in the young roach, and the general exclamation was, "He must be nearly starved; give him another dose." This was done, and immediately jack saw the new arrival, he, to the extraordinary astonishment of the gaping lookers on, followed the example of the whale we read about, and cast forth the roach (not Jonah) he had already made an inside passenger, and swallowed the last comer. The "outcast" came quite round in a minute or two, and was put back safe and sound into the other aquarium. I regret to add that the poor fish, after a lapse of a week or two, was again given by the hard-hearted "Jones" to jack's tender mercies, and has not been visible from that day to this. Have any of your readers had a similar experience?—I am, &c.,

Nov. 7, 1882. R. WOOLFALL.

THE RIVER AVON.

SIR,—The writer of the article in your issue of the 4th inst., "Fishing Round Birmingham," speaking of the Avon, says, "The Avon, to wit, miles of which could be rented for a ridiculously small sum;" he also speaks of the Avon and some other rivers, as being "fished, wired, poisoned, netted, and sometimes dynamited, to a fearful extent." Again, "The Avon, alas! thou beautiful, but ill-used river . . . . . Not but what thou art still beautiful, but the finny treasures have departed, prey to the depredations of sewage and the poacher, and want of proper protection." Would your contributor kindly say to what particular portion of the Avon he refers?—I am, etc., ARROW.

FISHING CLUB AT A PRIVATE HOUSE.

SIR,—Can you inform me and several others if there is a fishing club held at a private house or rooms in London; and if not, could you kindly give us the necessary information towards forming one, and oblige?—I am, &c.,

Nov. 4, 1882. ENQUIRER.

[We do not know of any such club, but "Enquirer" can form one by finding the place and advertising for the members.—ED.]

THE GRESHAM ANGLING SOCIETY.

DR. BRUNTON AMONG THE GRAYLING.

PROBABLY the finest tray of grayling ever weighed in before an Angling Society, graced the tables of The Gresham on Tuesday last, Dr. Brunton bringing up six truly specimen fish, weighing in all a fraction over 8 lb. The largest turned the scale at 1 lb. 14 oz., so that it would have been over 2 lb. when caught, the grayling losing weight after being taken more rapidly than other fish. The whole of them were in splendid condition, and excited the admiration of a crowded room. All were taken on the finest drawn gut (with No. 1 hook), and a small fly made by Dr. Brunton himself. The doctor took 25 brace more, in the course of less than four hours' fishing, nearly the whole of which he returned to the water. The six specimens weighed in were generously presented to The Gresham, and mounted well, as we hope they will be, in one case, will form a unique and valuable addition to the Society's Museum, which has already several cases of exceptional value. We hear the Committee have decided to send their choicest cases of specimen fish to the Great International Fisheries Exhibition, 1883, and this fine sample of Dr. Brunton's skill will doubtless appear among the number.

PLEASANT DAYS AT WEST DRAYTON.

AMONGST the many pleasant reminiscences of my different angling excursions, the following incident always recurs to me when my thoughts revert to Thorney Broad. At the time I am writing of, there were, besides myself, four other gentlemen stopping at Godfrey's cosy retreat, one of whom, either intentionally or by accident, always managed to find his way to any spot where my friend Dr. —— and myself had met with more than ordinary success; until determined to be equal with this gentleman (I blush to acknowledge it), we made free with the casting net, used for the purpose of getting bait, and threw in higher up the river, with a result that would have settled the doubts of anyone who was at all sceptical as to the wealth of that part of the river in large and handsome roach; we, however, returned them all, with the exception of two or three of the finest which would have excited the envy of any roach fisher in England. These we carried as trophies to the house; of course, the gentleman in question was rapturous in his admiration of them, and inquired whereabouts we had caught them. My friend the Doctor informed him, in anticipation of what would follow, that we had taken them a few yards above the railway arch (which is, I may mention, a magnificent stretch of jack water), and with a red worm; also, to allay his doubts as to the veracity of our statement, should he have any, mentioned that we intended starting for the same spot at 6 o'clock the next morning in the hopes of getting a repetition of our good fortune. However, at half past five my friend awoke me and asked me to step into his bedroom, out of the pretty lattice window of which we could see the stretch of water mentioned, and pointed out to me our mutual friend accompanied by the best of good fishermen, old Tom Lowe, trudging off to the spot mentioned. I need hardly say he fished there until mid-day without any success, and guessed when we asked him, with countenances suggestive of suppressed mirth, "How he was getting on?" that he had been placed in the position of an unsuspicious party on the 1st of April; however, all rivalry was buried in a glass or two of our host's excellent grog and a pipe in the evening.

I must conclude by mentioning that the time I am writing about is six years ago; therefore, I think that I may rest satisfied by this time that the just wrath of our good friend and most jealous protector of the angling, Godfrey, should he read this and come to the conclusion that a net was put into that splendid swim known as the "Shoulder of Mutton," will be appeased by my solemn assurance that since then I have grown wiser, and a more faithful disciple of our excellent Isaac than to dream of such sacrilege as casting a net for any other purpose than for live bait. CYRIL B.

CLUB AND OTHER JOTTINGS.

By L. B.

THE annual monthly meeting of the United London Anglers' Central Committee took place on Monday evening, the 6th, at the Bald Faced Stag, Worship Square, Finsbury; Mr. Francis Morgan presiding. After the reading and confirming of minutes of last meeting, the adjourned question of an angler alleged to have left a society considerably in arrears, joined another, and tried to obtain a railway privilege ticket, the issue of same being opposed by the secretary of the society he had formerly belonged to, came on for consideration. After a long and animated discussion, in which Messrs. Murphy, Beckett, High, Manning, Welch, Theobalds, Chambers, and several other gentlemen took part, the matter came to the vote, and was finally decided in favour of the applicant by a considerable majority. The new revised list of angling societies was then distributed, the secretary's and chairman's salaries voted, and a new society enrolled; the meeting separating at a comparatively early hour, after a vote of thanks to the chairman.

A meeting of the working committee of the West Central Association took place on Friday evening. Among other business done, the Crown Piscatorial Society was enrolled on the books of the West Central, subject to the approval of the next monthly meeting.

A general visit of angling societies was paid the Phœnix Angling Society, Tavistock Arms, Werrington Street, Oakley Square, on Tuesday evening. There was a grand muster, thirteen clubs being numerously represented. The singing was very good, and secretary Elbourne looked radiant.

The next visit goes to the City of London Angling Club, Cogers' Hall, Bride Lane, Fleet Street, of which due notice will be given.

I am in receipt of a long and amusing letter from a friend residing at Maldon, in Essex, giving some very good accounts of the fishing—roach and jack—and concluding as follows:—"I have, however, only had hold of one really heavy pike—it is full early yet. He was seen by at least a dozen persons, and put down as quite 14 or 15 lb. After half an hour's exciting play he managed to bite the gimp just as I was on the point of landing him, and escaped with a saddle snap in his jaws. I fear the manner I employed the half-hour that followed this stroke of hard luck will not bear dwelling upon. Don't you think it would have been very much more polite had he allowed me to extricate those triangles? How the poor devil will do it himself I am puzzled to know. Can you tell me the weight of the heaviest pike (on good authority) caught in England?—I particularly want to know." Perhaps some of the readers of the FISHING GAZETTE will kindly assist me in answering this question. There are, amongst others, Mr. Jardine's two fish, the still heavier Rapley Lake fish, now the property of Mr. T. Hoole, and adorning the walls of the Hammersmith United club-room; the still heavier Whittlesea Mere pike, and several others; but I have such a bad memory for figures that I can't, for the life of me, remember their exact weight.

Messrs. Hoole and Geen are spending a few days at Hastings. It is to be hoped the change and sea breezes will do them a world of good.

The usual monthly meeting of the West Central Association will take place at the Portman Arms, Great Quebec Street, Baker Street, on Friday evening, the 17th.

I fear, from what I hear on all sides, comparatively few London clubs will send fish to the forthcoming exhibition, 1883. I offer no opinion on the question; but the chief reasons alleged are "that the winning of most of the principal prizes will be an easy walk over for certain well-known individuals and societies, and, moreover, societies do not care to denude their clubroom walls during the long months which include the time of the annual dinners of most societies, while the illiberal policy of the executive in refusing to pay expenses of carriage, collection, and insurance against damage—as has invariably been done at every previous exhibition—has proved in many cases the last straw that decided clubs and individuals against becoming exhibitors."

[All we can say to this is that the London angling club which will not pay the few shillings for carriage of its cases to this London Exhibition is not worthy of being represented at such a grand *international* show as this will be. We do not believe if has come to this—that unless a club knows it will get a prize it will not compete! Surely there is some of the true sport feeling left?—ED.]

A FEW REMARKS UPON GRAYLING FISHING FROM WORCESTER.

THE grayling season of 1882 on the Teme, Worcestershire, has so far been but poor. Owing to the continual high state of the river, the fly-fisher's chances have been but small; in fact, the water has not been low and fine since the first day in October; and of all months for grayling fishing give me October, or I may include September for early fish and small ones. On the 28th of September last year, and also the 27th of the same month, 1869, I landed seventeen good fish; the eight and a half brace taken on the 27th was as good a take of grayling as had been made at that station for years; there were eleven fish that averaged 15 oz. each, and nothing under 7 oz. I have been out three times this season, and do not see any chance of going out with the fly for at least two or three weeks; the river is bank-full. One thing, the fish will grow, and many will live to spawn that would have given some lover of the art a little sport, so that the old saying will hold good in this case—what is pleasure and gain for the one is loss and pain for the other. There will be some good fishing as soon as the water fines, for the angler who can command some gentles. If you cannot get any, a small worm—the brandling—will do; then there is a bait that will kill against any bait you can use, if used properly; not altogether do I allude to the use, but in choice of place you use it in. I may, by giving my knowledge from practice, afford a timely hint to some of the young anglers who read the FISHING GAZETTE. When fishing with the bait called the grasshopper, which you can obtain from any fishing-tackle maker, your rod should be a light one, not too stiff—about 12 feet, your line about 30 yards; in case of accident, it is well to have a few yards to spare upon your winch; about two yards of gut, fine, at the hook. The makers of this bait often dress it upon too coarse a gut; a good fine one, if stained, is best. When thus furnished you choose the top of the ford and fish it down, taking care to well try the parts where the water curls back, and where it is from 3 to 6 feet deep. Cast your bait from you, and gently jerk it to you by about 6 or 12 inches at a jerk. When you feel a fish, do not strike hard, as the grayling is one of not the strongest mouthed fish we have in our streams,—therefore, play the fellow with care. When he makes a dash, ease your line by leaning forward, also extend your arm so as to prevent a jerk; the play of your rod, together with that of your body in the above position, will soon cause your fish to meet you face to face. By the bye, some time ago, I read an inquiry in the GAZETTE, "Do Grayling take the Minnow?" I say, "No"; but, at the same time, some of the small minnows made now are as much like a grub as a fish; in my opinion, that will explain the query.

J. A. GRIFFIN.

POACHERS PAST AND PRESENT.

A FEW days ago, whilst looking over my volume of "The Records of the City of Oxford," I came across the following account of the arrest of two men, caught poaching in the common waters, and as it affords a striking example of the mode of dealing with that class of gentry, by the Oxford magistrates of 200 years ago, in contrast to the foolish leniency displayed by their successors of the present day, in the case reported in your columns of the FISHING GAZETTE recently I send it verbatim.

April 23, 1553.

John Owen of Sandford, in com. Oxon., & Richard Day of Long Witnam, in com. Berks, deposed before me, Tho. Owen, in the presence of Roger Herne & James Sadocke, that in the last yere of King Edward vj^{th}, after the exaltacion of the crosse, $xiiij^{th}$ of September, what certayne day they remembered not, they went in fysshing in the common waters behind Triswythis, adjoining Cowmede, (probably that part of the river between Osney Bridge and Folley Lock) together also w^{th} one Nicholas Day of Wulvercatte, & that John Wayte & Thomas Cogan, then Bailyes of Oxford, came unto them w^{th} a poer of men, & entred into their botes, and tooke awaye their nette and Fisshe, & took with them the said Nicholas Day & John Owen, and when they cam to Karfox, Alderman Irish there then sitting and espying them coming, askid what the matter was; quoth the said Wayte & Cogan, We have taken foryners in fishing in O^r Common waters.

Then quoth Alderman Irish, As for one of them, John Owen, I know he is free, for he was made fre in myne yeres, and I wilbe suerty for him.

Then quoth Nicholas Day, What say ye then to me, am not I also a freeman?

Whereto Alderman Irish answered y^t he could say little for him, & the said Baileys said furder he was no freeman, nor shold not be used like any freeman, & $therw^{th}$ tooke away from him both his nett & his fissh; they then had him also to Bocardo (the prison where Cranmer, Latimer, and Ridley were confined previous to laying down their life in defence of their Master's teaching, as a standing rebuke to the Church of Rome for her interpretation of the divine command, Love ye one another, the door of their cell is now in the martyrs' aisle in St. Mary Magdalene's Church, and the portraits of the three prelates are drawn in poker work on the top panel), and did sette him in the stocke howse otherwize then freemen are wont to be used.

Alderman Flaxon being then Mayor, who being complained unto, refused to do him Justice therein.

If it would only please Providence to drown some of the gang who infest the river and hang in their own nets and permit the other portion to be hanged, the fish might then stand a chance of increasing; they are men who have no character to loose, and they know their only punishment is a fine of a few shillings and the confiscation of their net, provided the Bailiffs have the good fortune to capture it, and perhaps in the interim they have cleared £20 or £30 worth of fish from the water.

I am of opinion that a liberal use of the cat would soon put a stop to night poaching after fish and game, and its oft accompanied crime of murder.

The only means of reaching a poacher is through his skin, that being the only argument understood by him and the class from which he springs.

CHERWELL OTTER.

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

JIM KEENE.

A "THAMES ANGLER" calls our attention to the death, last week, of the one-armed fisherman, Jim Keene, so well known to anglers at Egham and the neighbouring reaches of the river. "For several years past," our correspondent writes, "he has been completely paralysed, and his wife has had to support him entirely. Poor Jim had the good fortune of being remembered by some of his old customers, or it would have gone hard with him; but he was still more fortunate in possessing a respectable hard-working woman as a wife, who never gave in, but struggled on to the last to prevent his being a 'burden to the parish.' In this she succeeded; but it would be a real charity if some of those who have spent pleasant days in olden times with one-armed Jim would send a trifle to the widow in the hour of her affliction. She has naturally been hard pushed, but has fought bravely, and now has to start afresh with her little daughter, and a few pounds would probably put her in a position to earn her living, as she is well-known and respected in Egham. Will you, Sir, be the recipient of any small sums that may be sent to you, as, if I mistake not, poor Jim was not altogether unknown to you." Our correspondent is right in his surmise, and we shall be happy to receive and forward to Mrs. Keene any sums that may be entrusted to us.—ED. *The Globe.*

FISHING RODS and TACKLE
of every description.

The Angler's Handbook and Catalogue of Prices, with eighty Illustrations of Rods, Flies, Baits, Tackle, &c., post free, Three Pence.

HOTELS, INNS.
ANGLING QUARTERS & WATERS

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald
(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

ROACH & BREAM FISHERS

Should try a day's fishing in the 350 acres of water strictly preserved, belonging to

THE WELSH HARP FISHERY
CAPITAL ACCOMMODATION AT WARNER'S,
BOATS, PUNTS, &c.

"Pike, perch, roach, &c., are numerous."—Angler's Diary.

Frequent Trains from all Metropolitan stations to Welsh Harp.

(Book for the Welsh Harp Station.)

FISHING
FOR PIKE, PERCH, and RUDD.

"The best in the West of England."

VICKERY'S TORCROSS HOTEL, a perfect Fisherman's home, also capital Sea Fishing.
Billiard Table and Posting.
Tariff—Weekly Boarders, £2 5s. 6d., including (table d' hôte) Breakfast, Lunch, Dinner and attendance.
Bank Fishing Free to Visitors.
Boats at moderate charges.
Nearest Railway Station Dartmouth, Great Western Railway.
Postal and Telegraph, Torcross, near Kingsbridge, South Devon.

Torcross is about 20 miles south of Torquay—the mildest climate in England for winter fishing.

FISHING AND SHOOTING SEASON.

No Sportsman should leave for the Rivers or Moors without having his boots dressed with STRAWSON'S WATERPROOF. Shooting and other boots dressed with it will resist dew, rain, snow, and sea water. It softens and preserves the leather, makes the soles of boots and shoes *thoroughly waterproof*, and consequently increases their wear and the comfort of the wearer. Sold in tins, at 1s., 2s., 5s., and 10s. Ask your Bootmaker or Saddler to procure it for you, or send stamps for a sample to JOHN BLAKEY, sole proprietor, Lady Lane, Leeds.

(Opinion of a well known Angler—"Your waterproofing is the best in the world,.'—H. CHOLMONDELEY PENNELL.)

OVA, FRY, and YEARLINGS of the favourite varieties of SALMONIDÆ, including S. Fario (brook trout), S. Fontinalis (American trout), S. Ferox (Great Lake trout), S. Levenensis (Loch Leven trout), Thymallus Vulgaris (grayling), and Hybrids, will be FOR SALE from November to April.—For prices apply to T. Andrews, Westgate House, Guildford.

ESTABLISHED OVER HALF A CENTURY.

SATURDAY, NOVEMBER 18, 1882.

DISCUSSIONS AT OUR CLUB.

BY THE SECRETARY.

OUR club is not a very large one—we do not wish it to be, for we have limited it to twelve members. We meet once a week, on Friday evening, eight o'clock is our time, and it is never much past that hour before twelve solid oak arm-chairs are filled by twelve more or less solid anglers. On the polished oak table are twelve glasses—a glass in front of each angler—twelve wax candles give out a quiet, cool light, and cast reflections on glass fish-cases and polished oak wainscoting round the room.

The rules of the Occabot Club—for that is our name—are few but stringent.

1. Every Occabot must be a smoker.
2. No Occabot may be a teetotaler.
3. Every Occabot must be an angler.
4. No Occabot may fish for any prize.
5. No Occabot may be under twenty years of age.

The objects of the Occabot Club are:—

To cultivate the sport of angling in a sportsmanlike way.

To discuss angling matters in a sociable manner.

A quarter of an hour is allowed for general chat, then our president for the evening raps the table.

"Gentlemen, the matter before the Occabot Club this evening is 'The comparative advantages and disadvantages of the Thames and Trent styles of fishing.' I shall call on Plummet to open the subject."

Plummet.—"Gentlemen, you know that my views on this matter are in accordance with my practice. I hold that the Nottingham style is as far above all other styles as Snowdon is above Hampstead Heath. I don't care whether you are spinning or bottom fishing, for trout or coarse fish, from bank or boat, you can do your work more easily, surely and quickly, from the reel than in any other way."

Ledger.—"Pardon me, friend Plummet, but I think you are assuming too much for your pet style. You will hardly deny that we have as good anglers on the Thames as the Trent can boast of?"

Plummet.—"Granted, but for all that your best Thames anglers are adepts in the Trent style."

Ledger.—"True, to some extent; but I could find you men who, although they may fish from the reel for chub, will tell you that for jack-fishing the Thames style more than holds its own; they aver that by drawing the line in with the hand, they can impart a more killing movement to the bait than is possible with the reel."

Plummet.—"That I most distinctly deny; indeed, I will go further, and say that an adept with the Nottingham winch can do more in the way of varying the movement than your Thames style will permit; he can spin fast or slow, he can make his bait dive, he can bring it on in jerks, and he can spin over weeds which your Thames man would foul."

Split-shot.—"It seems to me that the mere question of imparting variety to the movement of the bait depends more on a proper use of the rod than the line. All those jerks and dives you speak of are best done with the rod."

Plummet.—"Just so, and that is where I fail to see why friend Ledger would claim this finessing the bait—if I may so term it—as a peculiar property of the Thames style. I say that the same thing can be better done in our style, because of the immense advantages we have in the manner of casting. We have the line constantly under control. Our attention is not half absorbed in seeing that the line is not catching over some bit of twig or long grass or punt thwart as it is pulled in. We can stand knee-deep amongst thistles and thorns, and fish places your Thames style could never touch, simply because the nearest smooth ground is a hundred yards off. We can wade over broad shallows and fish every inch. Where is your Thames style in such a case? Can you coil the line at your feet in the water?"

Tweezer.—"Just touch the bell, Plummet. Your last observation is such a smasher, friend Ledger will require some Scotch to encourage him."

Ledger.—"Once you can convince me that your Nottingham style can give that deadly movement to the bait which the Thames style claims, it would be mere prejudice not to admit the other advantages of the system."

Swivel.—"I confess, for my part, although I practise the Thames style of spinning, I have always had a sort of sneaking conviction that if I could master the cast from the reel I should become a convert to the Nottingham style, but that 'if' is the question. I think we should all be obliged if Plummet would give us an outline of the method he uses."

Plummet.—"With the greatest pleasure. The chief reasons why so many anglers give up the Nottingham style in disgust is because they have expected to learn the whole thing at once; for, simple as the style really is, it requires some practice to master the first principles. The rod should be light, stiff, and yet with a fair amount of spring in it; the rings few, large and stiff, *i.e.*, upright; the revolving steel rings with metal guides fore and aft, to throw the line off, are the best. The line may be plain or waterproofed, but must be fine and smooth. The winch should be large, not less than 3½ inches in diameter. It is bad policy to buy a cheap reel, as the wood is not likely to be well seasoned, and the parts are not likely to fit with that nicety which is absolutely necessary to ensure true work. A great point in selecting the reel is to see that it runs perfectly freely, and yet that the reel itself fits so nicely into the box as to leave no room for the fine line to catch in between. In nine out of a dozen reels you will find that at some part of the circle the edge of the spindle almost touches the box, and in others there is a gap into which the line at some critical moment is sure to find its way, and cause perhaps a break or the loss of a fish. But the safest plan, as I said before, is to give a good price and get a good article. I prefer, myself, one in which a check action can be brought into play by touching a spring; this at once converts the delicate, flighty, restless Nottingham into a sober-sided, steady-going, ordinary winch, useful for any kind of fishing. I need not describe the bait and line, but whether it be a natural dace or an artificial bait of any kind, it should be attached to the line by means of a well-swivelled sound, stained, single or double gut-trace; half a foot of stained gimp should intervene between the bait and the trace, to keep the pike's teeth at a safe distance. I will suppose the angler has his rod and tackle, as described above, ready, and is standing on the bank of a river or lake. He need not trouble himself about the twigs, sticks, leaves, &c. at his feet; all he wants is room to swing his bait. He winds up until the top of the trace is close to the end ring of the rod, grasps the rod a foot above the winch with his right hand, the left hand is underneath the winch with the fingers just touching the lower outside rim of the revolving part of the reel. Turning his back on the water, he gives a swing to the bait. There must be no jerk, mind, only a continuous swing, with the force increasing gradually at first, but more quickly as the end of the sweep is reached. At this instant the line is released by the fingers of the left hand being almost removed for a second from the edge of the reel. I say almost removed, because they must never entirely loose contact with it. The bait is now travelling through the air, the reel is spinning round at an immense rate, and the finger-points of the left hand are just keeping feather touch of the revolving rim. The pressure must be so slight as not to impede the proper rotation, and yet sufficient to prevent too fast a movement. Then the instant the bait falls the fingers are pressed tightly on the rim, and it is stopped. Some anglers hold the rod in the left hand, and control the winch with the forefinger of the right; and for those who can manage the cast properly with the left hand this is undoubtedly the best plan, because then no shifting of the rod from one hand to the other, in order to wind in, is necessary; but for my own part I prefer casting with the right hand, and the loss of time is so inappreciable that even in the shallowest water I can always get a spin on the bait before it has time to touch the bottom. Another advantage of casting with the right hand and changing to the left when spinning home is, that both arms are made to do an equal amount of work, and each is alternately rested. There is more in this than would appear at first. Every Thames spinner knows what hard arm and back-aching work spinning is, but this alternate work and rest leaves one as fresh after an hour or two's incessant spins as before, and this in spite of the fact that your Nottingham adept can work fully three times as fast as your Thames style will admit. In spinning the bait home you must keep your rod at an angle with the direction in which the bait is travelling, so as always to avoid a straight pull from the winch; in case of a run, the elasticity cf the rod breaks the strain. Of course, as I said before, the angler can impart any motion he likes to his bait by a judicious use of the rod and reel. Care must be taken in winding-in to see that the line is evenly distributed on the winch, otherwise it may be piled upon one side and touch the box and 'stick.' The angler who wishes to learn casting from the winch must think nothing of finding his delicate line in an apparently inextricable muddle every few casts; these tangles are nothing like so formidable as they seem, and generally can be undone in half the time it takes to extricate a Thames caster's line from the embraces of a bit of bramble. When once an angler has mastered the only real difficulty in the Nottingham style, viz., the keeping touch of the winch while the line is flying off, he has little else to learn. I have seen men take up a rod and attempt to make a cast; the swing was right, the bait has gone twenty yards beautifully, the angler's eye follows it with pride, and the next instant the bait has flown off like a shot from a catapult, the winch has stopped, and the dismayed angler is looking hopelessly at a tangled network of Nottingham twist. 'If that is your Nottingham style, I don't like it,' he says. You explain that he ought to have kept his finger on the reel. He tries again; it is a cold day, and his fingers are not very sensitive to 'fine edges.' Out goes the bait, perhaps fifteen yards. 'Brutus!' exclaims your friend, and down goes the rod, as he jumps about sucking an aching finger. 'What's the matter?' 'Matter! why, didn't you tell me to control the reel? The blessed thing has nearly knocked my finger off!' 'Ah, my friend, that will be a lesson to you to keep your fingers out of the way of the handles! You only require to touch just the rim of the reel, just to feel the least bit in the world of it. Yes, those little handles can give a wonderfully hard knock when going round at full speed! When you are used to it you will never knock your fingers and never have a tangle, except from sheer carelessness.' But here comes Red Hackle, and I know he wants to tell us about his flirtation with that pretty little girl at the Derwent Arms. My word, what bouncing grayling!"

We passed a vote of thanks to Plummet, and the rest of that evening passed quickly with the pleasant chat and chaff which make our cosy club meetings so enjoyable.

HISTORY OF THE RECENT IMPORTATION OF BLACK BASS INTO ENGLAND.

THE experiment of introducing and acclimatising black bass in England having been successfully accomplished by the Marquis of Exeter, and his pisciculturist W. T. Silk, a number of gentlemen interested in his lordship's success and desirous of obtaining a further supply of the fish, made application to his lordship with a view to get over from America sufficient black bass to enable each subscriber to stock their several waters. Lord Exeter, with his usual liberality, expressed himself most willing to do so, and desirous of assisting and contributing towards the expenses attending the same.

The gentlemen composing the company were the Duke of Manchester, the Marquis of Exeter, Mr. R. B. Marston (Editor of the FISHING GAZETTE), Mr. Churchhill Thornhill, Mr. W. C. Chambers, hon. sec. of the Norfolk and Suffolk Fish Acclimatisation Society; Mr. C. L. Buxton, Mr. Jonathan Haigh, president of the Wakefield Black Bass Angling Club; Mr. T. Carrington, on behalf of the Royal Aquarium, Westminster; and Mr. C. C. Capel, of Foot's Cray, Kent. Application was made to Professor Spencer Baird, Commissioner of Fisheries for the United States, to obtain the bass for importation. Mr. Baird stated in his reply that he had plenty of black bass for this purpose, and that he would give all the assistance in his power to ensure success to the undertaking. Mr. W. T. Silk was directed by the Marquis of Exeter to make such arrangements as he considered necessary to ensure success. The White Star Steamship Company were applied to for conveyance of the tanks (necessary to carry the fish in) to and from America. With great liberality they offered to do this, and supply water and ice free of charge. The London and North Western Railway Company agreed to furnish a truck from Liverpool to Stamford at 6d. per mile. Mr. W. T. Silk with the tanks embarked on the s.s. "Germanic" on the 21st, and landed in New York on the 30th of September. Professor S. Baird was communicated with at once (he being then engaged in experiments in fish culture at Woods Hall, Conn, but, unfortunately, all the black bass belonging to the United States Fish Commission had succumbed to the heat. Professor Baird immediately telegraphed to Mr. Eugene G. Blackford, Commissioner of Fisheries for the State of New York, and to Mr. Fred Mather, fishing editor of *Forest and Stream*. These gentlemen very kindly gave Mr. Silk every assistance in their power, and Greenwood Lake, N Y., was recommended as the nearest and best place to obtain a further supply of fish. Mr. W. O. McDowes offered the courtesies of the Club House on the lake, and a move was at once made for Warwick Woodlands. Mr. Waterstone, the steward of the association, sent for some of the guides living round the lake, and informed them what was wanted. They commenced to see innumerable difficulties in the way of obtaining the bass and to put the price on in consequence. Netting was tried, but was found not to answer, as the fish had left the shallows and gone into deeper water, so the hook and line had to be adopted as a last resource. Mr. Silk says the fish fought splendidly, and that most of the best fish got away after being hooked. They were taken with minnows. On Friday, 13th October, the first lot, between 300 and 400, were taken from Greenwood Lake to New York, and placed in the tanks at Mr. E. G. Blackford's place in Fulton Market. The next lot of about 400 were brought down Thursday, 19th October. We give the rest in Mr. Silk's own words:—

"The ship 'Baltic' sailing on the 21st, I found that a considerable number of the first consignment had died, and before Saturday, several of the second lot went the same way. The reason of this was the unusually high temperature of the water and atmosphere. On Saturday morning, 21st October, Mr. James Ramsbottom (who kindly offered his services) and myself started for the s.s. 'Baltic' (which sailed at 12 noon) with the first lot of fish, it being judged best to bring them in two lots. Our wagon got blocked in the traffic, and we were delayed considerably. On arriving at the ship, we expected to have found the tanks ready for the fish, but were doomed to disappointment. I found Mr. Nicol, the first officer, who proceeded to put the tanks in position in a most energetic way. The hose with fresh water was laid on from the dock and the tanks filled. A lot of the bass were turning sick with being crowded in the cans, and it did not mend matters much putting them in the tanks, the water being over 70 deg. The second lot of fish arrived about half-past eleven a.m., some of them looking very sick, and on turning them out I missed some large black bass that had been put into a separate tank for the purpose of exhibiting them. Mr. Eugene G. Blackford has since written to me expressing his regret that in the hurry they were overlooked. I had now to look about for some men to assist me on the passage. I soon found three, two of them being shipwrecked sailors that were being sent home by the British Consul. After getting outside of Sandy Hook it commenced to blow, and by midnight we were in a stiff gale with a head wind; this lasted until Monday evening, the weather in the meantime being very close. It was during this time that the mortality was greatest amongst the fish, and a number were rolled right out of the tanks on to the deck and were washed away by the sea. On Wednesday, 25th, the weather commenced to get cooler and the fish to do better. The following day I got the water down to 40 deg. with ice, and from that time until arriving in Liverpool did not lose more than two fish per day. We arrived in Liverpool on Tuesday afternoon, and I must now thank the captain Mr. H. Parsell, the chief officer, Mr. Nicol, and the chief engineer, Mr. McIntosh, for rendering me every assistance on the voyage. In landing or swinging the tanks from the ship to the dock, the smallest tank containing most of the small fish slipped in the slings and canted up, spilling a lot of water and fish into the basin. Burghley Park was reached on Wednesday, 1st November, and on counting the fish, we found we had a few over 350, three-fourths being large fish that will spawn next April; this being considered by Mr. R. B. Marston and other gentlemen as a much more satisfactory result than if a larger number of smaller fish had been landed, as in that case, two years would have to elapse before the fish would spawn.

"After getting over the Great Bank and reaching cooler water, I tried the experiment of putting black bass into salt water. They did not seem to mind it in the least, and after being in for twenty-four hours, they went back into fresh water as if they had never been subjected to any such experiment."

W. T. Silk.

[We most heartily congratulate Mr. Silk on the very satisfactory result of his expedition. He had to overcome very great difficulties, and the manner in which he did it reflects the highest credit on his skill and perseverance. We venture to predict that from the stock of black bass which he has introduced into England, in a few years thousands of acres of our ponds, lakes, canals, and rivers will be stocked with this magnificent game fish. It is not the intention of any of the gentlemen who have joined in this undertaking to put the fish into waters which are well suited to trout and grayling: they thrive best in waters in which trout and grayling will not thrive. In a few years' time black bass fishing will become as general and as popular in this country as it is in the United States.—Ed.]

RICHMOND PISCATORIAL SOCIETY.

The members of the Richmond Piscatorial Society were engaged on Wednesday last in fishing for prizes in the tidal portion of the Thames, between Teddington and Richmond. This competition was originated by the liberal offer of a silver cup of five guineas, or the amount in money, or fishing tackle, by the well known firm of Messrs. G. Little and Co., Fishing Rod and Tackle Makers to the Prince and Princess of Wales, 15, Fetter Lane, Fleet Street. In accordance with the thorough sportsmanlike character of the Richmond Piscatorial Society, a high standard of measurement was conditional in the weighing-in of the fish, and all the arrangements for the match were generally conducive to the interests of true and legitimate sport. This competition was to have taken place a fortnight previous, but had to be postponed, in consequence of the presence of a flood, which made angling almost impossible. The members have been looking forward to the value of this contest as an important event—important from the very liberal prize offered by one of their members, and important to test their character as anglers in their portion of the river. In addition to the valuable prize offered by Messrs. G. Little and Co., there was a second prize of twenty-five shillings, given by Mr. Lucas, and the entrance fee of one shilling each from the twenty members who gave in their names as competitors, formed a third prize. The fish, to consist of roach and dace, were to be weighed in by eight o'clock—the roach to measure nine inches in extreme length, and the dace seven inches. At the closing hour of eight o'clock, the following fish were weighed in:—Mr. W. Hester, 5 lb. 3 oz. of roach and dace; Mr. H. Johnson, 3 lb. 15 oz.; Mr. G. Hester, 3 lb. 3 oz.; Mr. Terrill, 2 lb. 13 oz.; Mr. Heasler, 2 lb. 10 oz.; Mr. Houghton, 1 lb. 15½ oz.; Mr. E. V. Powell, 1 lb. 10½ oz; Mr. Smith, 1 lb. 9 oz.; Mr. Dickinson, 1 lb. 5 oz.; Mr. Griffiths, 14 oz. Had the size of roach been of the Thames standard there would have been a much better show of fish, as in the case of Mr. Johnson he had to reject a considerable number of roach from 8 inches to 8¾ inches; and this was the case with other competitors. So carefully were the fish measured in "the hall of judgment" that numbers of fish within one-eighth of an inch of the stipulated size were cast away. The result of the contest was the securing of the first prize by Mr. W. Hester, the second prize by Mr. H. Johnson, and the third prize by Mr. G. Hester. The weighing-in created great excitement, and an interchange of familiar and friendly jokes. It was arranged to have a supper in the club room at the conclusion of the match, and under the instructions of the committee Mr. John Munro provided, in his good style, a selected entertainment of roast beef and a boiled leg of mutton, to each of which every justice was done, and precious little left, owing to the attendance being much larger than expected. Mr. F. C. Clench as usual maintained the dignity of the chair, and Mr. H. Dickinson was in good form in the vice-chair. There were present Messrs. A. J. Little, J. P. Houghton, W. H. Brougham, H. B. Taman, H. Terrill, W. Cockburn, H. Gaunt, E. V. Powell, R. B. Matthew, John Bond, W. Hester, G. Hester, H. Johnson, Plant, Crew, Scantlebury, Lucas, H. E. Gaynor, Smith, Summers, Field, Heasler, Brewer, &c., &c. After the loyal toast the chairman eloquently and impressively referred to the death of Mr. Thomas Abbott, a vice president of the Society, who was not only one of its founders, but for some years acted as its treasurer, and in well chosen words proposed a vote of condolence, concluding an admirable speech by calling upon the company to stand up and to drink to the memory of their dear old friend. The Chairman, after announcing the result of the competition, and the award of the prizes, gave "The Prize Winners," which was briefly replied to by Mr. W. Hester. Mr. Taman proposed "The Thames Angling Preservation Society," and said how very much they were indebted to it in looking after the river and affording pleasure to the angler. He referred to the success of the recent conference at the Cannon Street Hotel, which was suggested by the Richmond Piscatorial Society, and so ably carried out by the T. A. P. S. He coupled with the toast the name of their good friend, Mr. W. H. Brougham. Mr. Brougham, in responding, expressed much gratification in being amongst them that evening, and his pleasure was greatly increased by the voluntary offers of Mr. Terrill and Mr. Cockburn to become guinea subscribers to his society. In noticing the remarks of Mr. Taman, in reference to the conference, he need only add that whilst there was much labour in getting it up, it was a great and conspicuous success, and with the unanimity that prevailed in making certain suggestions, the conservators would not fail in acceding to their wishes. Mr. Terrill, on being called upon to make a few observations, remarked it was a crying disgrace to the anglers in not contributing to the funds of the T. A. P. S. He thought an organized movement amongst the Clubs, on the principle of the Hospital Saturday, would be highly beneficial—some members could give a shilling each, others sixpence, and the rest threepence; this would realize a good sum. There were thousands of anglers who fished the Thames and never contributed one penny. He also thought there were many anglers that could give half-a-guinea as an annual subscription, who could not afford a guinea, and he could not help thinking if some steps were taken in that direction, it would be an easy matter to add £500 a year to the income of the Society. The Chairman then distributed the prizes won at the last Kingston Competition—one of these was half-a-dozen bottles of whisky, which the receiver ordered to be opened for the benefit of those who were present. It was an act of kindness, but not much to the benefit of the hostelry. The Chairman gave "The Prize Donors," which was replied to by Mr. Lucas. There is to be a smoking concert on Wednesday next. B.

THE GRESHAM ANGLING SOCIETY.

The members of this society had an enjoyable evening on Tuesday evening last, although the attendance was rather under the average, there being no special business to bring before the meeting. The chair was taken by John Groom, Esq. The secretary read the usual correspondence—a note from Mr. King, of the Royal Oak, Windsor, indicating that the river was rising there; Bartholomew, reporting from Goring, "water getting into better condition, and fair prospect of sport if no more rain." Few fish have been weighed in since last report. Dr. Brunton has, however, had another successful day among the grayling, surpassing if possible his recent achievement. One of the best of his captures, a handsome fish of 2 lb. 5 oz., was presented to the society, and will be preserved with those kindly given last week, so that the society will undoubtedly possess the finest, and, it is hoped, the most artistically mounted, case of grayling yet obtained. After the ballot for a new member, the usual musical selections were given, Messrs. Moore, Aveling, Jardine, Clarke, Young, Callaghan, Morgan, Neville, and others, materially aiding in the harmony of the evening.

Mr. Charles Bates drew attention to the fact that angling interests were coming under popular notice, expressing the opinion that the Corporation of London were now more or less committed to the defence of the rights of anglers on the Thames, as indicated by the banner carried for the first time in the procession of the Lord Mayor to Westminster on the 9th inst. He thought some trifling souvenir might appropriately be given to the anglers who gave up their time and attended on that remarkable occasion to aid in asserting what was deemed a public right, now placed in jeopardy by the action of a few riparians. Mr. Crumplen fully supported this suggestion, expressing the opinion that the recognition of the angling fraternity by the Civic authorities was likely to lead to important results, especially in enlisting public opinion, which was certain to help them to vindicate their rights.

The Rev. J. F. Stewart Dyer, M.A., was among the visitors at the meeting. Mr. Morgan, Chairman of the East Central Committee, also attended. The society look forward to a large gathering on Tuesday next, when the prizes for the past year are to be distributed. Members of other angling societies are always welcomed, and now that the "Gresham" meets at Masons' Hall Tavern, Basinghall Street, City, they have ample room for all who may favour them by attending.

BIRMINGHAM AND MIDLAND PISCATORIAL ASSOCIATION.

THE annual dinner of this association was held on Thursday evening, November 2, at the Grand Hotel, Colmore Row. Mr. Oliver Pemberton, J.P., the president of the association, presided. Among those present were Alderman Cook, Messrs. Alan Bagot (of the Trent Conservancy Board), Adams Parker (vice president), E. Hooper, M. Hooper, H. Pemberton, C. O. Pemberton, G. Pemberton, R. Mann, W. Day, Jas. Botteley, W. Reynolds, S. Basnett, J. Allday (treasurer), T. Thornton, E. Haseler, S. Mee, and J. Gregory (hon. sec.), &c., &c. After the usual loyal and patriotic toasts, the chairman, in giving the toast of the evening, "The Birmingham and Midland Piscatorial Association," after wishing the association every success, said the man who had no leisure was a very contemptible being, and the man who said he had leisure, and did not know exactly what he was going to do with it, was unhappy indeed—(hear, hear). As a medical man he asserted that it was as necessary for a man to have leisure as it was for him to have sleep, and the harder a man's labours were the more necessity was there that he should have leisure and amusement in it—(applause). Nearly two centuries ago Isaak Walton wrote the undying pastoral on angling, and his words were then and were now true. Nothing could be more suggestive than his description of the summer time of the year, where he told us of that fisherman who, having caught his few brace of fish, goes to an inn close at hand where he has them cooked, and where "he found the landlady pleasant, and the daughters beautiful as well as virtuous; the parlour clean, lavender between the sheets, and ballads on the wall"—(laughter and applause). And later his description of the hard winter months, during which the angler had to battle with the inclemency of the weather in his pursuit of the voracious pike. Angling, as a sport, had been the delight of the high and the low. It was not generally known that the great Nelson was as enthusiastic a fisher, and plied the rod as ardently with his one arm, as our blind Mr. Fawcett now did. (Cheers.) He (the chairman) congratulated the association upon the progress it had attained in the past time, which was truly described as "free from strife." The angler pursued his art purely and simply for recreation; he interfered with no one, he offended neither God nor man, and he culled from his pursuit the purest and most elevating of enjoyment it was possible for man to have. He hoped the Birmingham and Midland Piscatorial Society would long flourish and gain strength with age. (Applause.)

Mr. Adams Parker, who responded, noted the good sport that had been obtained during the past season, and spoke of the part which the association had taken in introducing trout into the Trent. The experiment had been most satisfactory, and he hoped they would see their way in the following year to enter into it more extensively. In conclusion, he proposed "The Trent Conservators," to which Mr. Allan Bagot replied in a long speech, detailing the various operations the Board of Conservators had entered into for the preservation and bettering of fishing in the Trent and its tributaries. He referred to the Acts of Parliament and their conditions; detailing also the prosecutions for illegal poaching, liming, and dynamiting, with valuable comments on the proceedings. Mr. Bagot's speech was received with much satisfaction; after which the prizes were distributed by the chairman as following:—

Mr. William Reynolds, the silver cup of the association, for the best fish of any description taken in the association's water during the season; Mr. Adams Parker, gold pin, presented by Mr. John Allday for the best barbel; Mr. Jas. Gregory, gold pin, presented by Mr. Sam Basnett, for the best roach; Mr. Edwin Hooper, a spade, shovel, and fork, presented by Mr. T. Thornton for the best chub; a gold signet ring, presented by Mr. Phillip Antrobus for the best grayling, was won by Mr. C. Ricket; two sets of Gregory's spinning baits and tackles for the best pike, first prize was taken by Mr. John Roberts, jun., and the second by Mr. Fred Dunn; Francis Francis, "Book on Angling," presented by Mr. Jas. Botteley, was won by Mr. Henry Jephcott for second-best roach. The other toasts were "The President," proposed by Mr. Sam Basnett, "The Vice-President," "The Treasurer," "The Hon. Secretary," and "The Visitors." This toast was proposed by Mr. John Allday, Alderman Cook and Mr. Alan Bagot responding. The latter, after thanking the members for the cordial manner they had received him, and the pleasure he had enjoyed by the kind invitation of the committee, announced he should place in their hands a silver cup of the value of five guineas, to be fished for among the members. Other valuable prizes were promised, and the company broke up, after spending a very pleasant and convivial evening.

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

CLUB AND OTHER JOTTINGS.

By L. B.

MOST of the readers of the FISHING GAZETTE have doubtless long ere this read in the daily papers how a small group (eight) of London anglers, with their high boots, square roach baskets, and long rods, formed part of the recent Lord Mayor's procession, one of their number carrying a large blue banner, on which stood out boldly in white letters the significant words, "The Corporation and the Rights of the Thames Anglers." The moral result of this identifying of the "City fathers" with a movement having for object the upholding of undoubted public rights, enjoyed from time immemorial by thousands of toilers, not only in our huge metropolis, but along the whole Thames valley—just now so fiercely assailed on all points by a small clique of selfish men—the aquatic counterpart of the "Epping Forest enclosers," cannot be exaggerated. Moreover, a heavy expenditure of much otherwise needed funds in the form of circulars, public meetings, &c., would not have gained for us the publicity this simple thing has. All honour, then, to the men who conceived the idea, and to those who carried it out, but, above all, "honour to the ancient Corporation" which has once again thus fearlessly and unmistakably identified itself with a popular movement to uphold the rights of the humble many against the encroachments of the wealthy few. It is generally admitted that the amusements within the means of the humbler classes are exceedingly limited in number, and that, instead of being curtailed, they should certainly be increased. It seems, therefore, worthy, at least, of serious consideration at the hands of our legislators and social reformers, who seem to pin their hope of elevating the masses to purely prohibitive legislation of the most draconic and sweeping type. Whether such a desirable end would not be more easily attained, and when so attained have more lasting result, by fostering and assisting to carry out movements having for object the maintaining and multiplying of morally and physically beneficial counter-attractions, than which none surely can claim a more prominent place than our ancient sport of "fishing with an angle."

Messrs. Geen and Hoole have returned from their trip to Hastings, and though much improved in health, it will be some days yet before the latter will be fit for active work.

A meeting of the West Central Association of London and Provincial Angling Societies will take place at the Portman Arms, Great Quebec Street, this (Friday) evening. Among the business to be gone through, several societies are down for enrollment; the balance-sheet will be submitted and distributed; at least one application for a reward for conviction obtained against a poacher; correspondence with an upper Thames Preservation Society, *re* public right to angle from the towpaths. I think, from the strong opinions I have heard expressed on all sides, the question of the London and provincial anglers and the Great International Fisheries Exhibition will have to be gone into. At present the attitude of the London clubs is neither dignified to themselves or fair to those gentlemen they have elected to represent them on the sub-committee; either they should decide to support this exhibition with all their energy, or withdraw from it altogether. I fail to see that there is a middle course.

A No. 3 West Central Association visit will be paid the South London Angling Society, George and Dragon Tavern, 235, Camberwell Road, on Thursday evening, November 30.

The Brunswick Piscatorial Society has been broken up. Many of the leading members, including Mr. George Copeland, have, however, started another society, viz., The Eden Piscatorial.

The half-yearly dinner of the North Western Angling Society takes place on Thursday evening, November 23rd, at the club's headquarters, The Lord Southampton, Southampton Road, Haverstock Hill, N.W., Messrs. Aldis and Robert Marshall in the chair and vice-chair respectively. After the spread and the distribution of prizes harmony will reign supreme, and the "North Westerns" will make any brother "bob" who has an hour to spare, and is pleased to drop in, heartily welcomed.

Just a word to "Red Fisherman," who, it is evident, from the whole tenour of his communication, is considerably riled at having had the word "pitiful" applied to his letter. Well, I am very sorry I hurt his feelings. I used the word after due consideration because there was no other so well expressed my meaning, or more truthfully described his effusion.

In my notes I frankly admitted that all waters were liable to netting, and canal waters, which are great silent highways particularly, so that to entirely stop such netting would be an exceedingly difficult, if not an impossible, task, and from my knowledge of the "Grand Junction Canal," I fear there is only too good ground to believe that it is no exception to the general rule even in the best preserved portions. These facts are so generally known by all that surely it was inconsistent to publish them with such a flourish of trumpets. To what "Red Fisherman's" letter pointed so unmistakably was to a wholesale netting of the "Association's water," which no steps were being taken to prevent. Mr. Hoole, of course, pointed out to "Red Fisherman" how his necessary report erred on all points, and I tried to show him how the publishing of such unsupported hearsay was liable to do the Association harm with the anglers it represents; how it was calculated to encourage poachers, by leading them to believe no steps were being taken for their detection. I am sorry that my intentions have been so thoroughly misunderstood. There is, however, one thing to rejoice at, viz., "Red Fisherman" promises to follow my advice, to keep his eyes open, and when he sees anything wrong, either to take immediate steps to have it set right, or telegraph to Mr. Hoole the "facts."

This will be a lot better than rushing into print on the strength of the otherwise unsupported evidence of the simple native who smiled "that smile." Was it childlike and bland, like that of Bret Harte's "Heathen Chinee, who, nevertheless, played such a good hand at the game he did not understand"?

If "Red Fisherman" does address his communications to Mr. Hoole, it will be another matter; but while he addresses his epistles to the angling public generally, through the medium of a newspaper, he must necessarily be prepared for a reply from any writer therein or reader thereof who may choose to take the matter up.

DR. BRUNTON'S 28 BRACE OF GRAYLING.

[Several of our readers having expressed a desire to hear how Dr. B. took his fish, the Dr. has been kind enough to send us the following particulars. We thought there might have been some mistake in the accounts sent us last week, but Dr. Brunton's letter proves those accounts were correct. It was a wonderful catch for an English river, though it has been equalled (with strong tackle) in America.—Ed.]

Dear Mr. Marston,—I fished from 10.30 till 2.15 and took the fish mentioned (fifty-six). It was a nasty day, but somehow I got them on. In my first cast I took a $1\frac{1}{2}$ lb. fish, and in four more casts four fish, one over 1 lb. I returned all the fish under 1lb., except one or two which were badly hooked. I took good care to keep count; more than once I took a brace. All the fish taken, except three or four, would have been considered fine fish on the Dove or Derwent. Now, perhaps, you don't understand how rapidly fish can be taken and returned, and the caster go on at once. It is done by using a rod with upright rings, and instead of winding or reeling up every fish, the line is drawn up in coils with the left hand, when the fish is taken, unhooked, and returned; two casts of the rod take out all the loose line again, and there is no need for unreeling each time. Of course, this is only done with fish under 1 lb. Since my show at the Gresham, I fished the same water with the proprietor. We fished about an hour longer. I asked him "How did you get on?" He said, "At 2 o'clock, when the sun was clouded over, I got a fish every cast, and I have taken over 30 brace! Well, what have you done?" I said, "Somewhere about the same, only I have three over 1 lb., one $2\frac{1}{2}$ lb." All my fish were taken on the finest drawn gut. I carried a landing net with me first day, but after landing one or two fish, I found it more bother than use, and left it on the grass. I lost no flies in fish but one, and that I recovered five minutes after by catching same fish with the fly—a honeybumble—far down its throat. This was one of the fish I had to kill. In showing my fish I made no mention of county, river, or proprietor; you know the reason.

The writer of the paragraph, not I, says, "Probably the finest tray of grayling, &c." I don't say that finer specimens have not been shown—but it is the "tray of six." I caught a better fish as above, but I much prefer the six.—I am, yours faithfully,

H. M. Brunton.

THE "FOREST AND STREAM" ANGLERS' TOURNAMENT.

To the Editor of *Forest and Stream.*

In the last issue of your pleasing and instructive journal I was much interested in an article on the anglers' tournament—it was graphic and honest. I think that to such notices, just as much as to good casting, will depend the future success of our annual tournaments. Fair play is very essential to excite honourable emulation in every kind of contest, but it is especially required in developing the nicest skill of the "gentle art." Thus feeling, I think it my duty to correct a slight inaccuracy which occurs in your account of the contest. You say I only once threw my flies over 85 feet. The fact is I cast 90 feet just before I made the 91.

The accounts published in some of the papers intimate that I could not throw overhand. That is a mistake. I think I can cast overhand just as well as any other way. But I prefer my method, firstly, because I can cast with less than half the labour, and do more fishing in a half a mile than I could do in three miles by the overhand throw; secondly, because I can make a greater reach with more accuracy than by the overhand method; thirdly, because I would not consider my flies and leaders either ornamental or useful to the trees along a wooded stream. Some of these gentlemen also think that by my method I would frighten all the fish. Ah! that would be very bad indeed. And to think that in forty-five years' experience I should not have suspected that my method was frightening the poor little fishes. Perhaps that was the reason why I have received so many invitations to join fishing parties. They knew I would frighten the fish, and then they would the more easily catch them. As you know, if one should get frightened (say, while crossing Broadway) by one horse, he will be almost sure to run under the feet of another; so my friends wanted me along to frighten the fishes from my own line so that they would rush upon their's, filling their baskets rapidly. Now, after the publication of this exposé, I shall expect invitations to all the private ponds, that I may serve to make the success of my friends complete.

H. Prichard, in *Forest and Stream.*

New York, Oct, 30, 1882.

NOTES AND QUERIES.

Weasel Swimming.

Although in works on natural history the weasel is credited with good swimming powers, the following incident may not be without interest. While enjoying my lunch one fine day, last September, my attention was directed to a weasel making his way among the stones by the river side. The place is a ford, some seventy yards wide, lying between a long, flat shallow, and a deep pool. In a general way the ford consists of a swift, rushing stream, of about two feet six inches in its deepest part, but the water to-day had rapidly run in (a certain sign here of a coming flood), not more than twenty yards of stream being left. I noted that the weasel was making a bee line for the narrowest part of the stream, climbing every large stone in his path, raising on its hind legs and taking a good survey all round, then jumping down and on to the next large stone, often having to splash through small pools on its route. At length it reached what, to it, must have seemed a large stream, rushing as it does down a sharp incline, and some eight or ten inches in depth. After its customary look round it took a header into this stream, and swam straight for the opposite side. I ran, thinking to intercept it, but only to see it dive. Most probably it doubled back again amongst the loose flat stones, now left bare in the bed of the river, and though I turned many of them over, I failed to find it.

By the wet trail it had left, its path to the water was as straight as if drawn by a line.

In further proof of the courage of this weasel, at this same place I have seen a strong cur dog, when following its master across, washed down some twenty yards, the water then reaching nearly to the horse's belly.

Black Gnats.—A Protection from Midges.—A Cure for Hay Asthma.

Have our anglers noticed the fondness of the black gnats for seizing the floating skins of the little iron-blue dun, which are cast off during its metamorphosis to the Jenny spinner? Doubtless other exuviæ as well. You generally see them in pairs at this game, dancing up and down with their plaything, until, exhausted by their load, they drop on the water. Their litttle game seems to be well known to, and appreciated by, the trout, who are on the "qui-vive" for them. It is now that a few threads of white, or cream-coloured worsted, spun on at the shoulder of an artificial midge, proves so useful. From gnats to catch fish with, to gnats which catch anglers is but a short digression. It is just possible there may be other anglers besides myself who are non-smokers, and I certainly know some smokers whose skins are so fair and delicate that the attacks of midges are almost maddening. Let all such take comfort, and also a small bottle full of oil of cloves, when on their angling excursions, and so soon as they see the midges making tracks towards them, anoint all exposed parts with the oil (not minding the slight smarting), and fish on in peace.

If any of my brother piscators are obliged to keep house during that lovely time when the weather is of the finest, and the air laden with sweet scents, on account of their being subjected to periodical attacks of hay asthma, hay fever, nose catarrh, or by whatsoever name they know that annoying malady, they may be glad to learn, that after being subject to it for more than thirty years, I was cured by frequently smelling the following, being especially careful to use it when passing through any fields where the grass was in flower:—

Into a smelling-bottle containing sponge, pour one tea-spoonful of strong liquid ammonia, and upon that the same quantity of carbolic acid, when it is ready for use. Note, "the ammonia *must* be poured in *first.*" Quinine in small doses is also very useful.

Questions for Salmon Anglers.

In the "Moor and Loch," by J. Colquhoun, when treating on salmon, the expression "a feeding salmon" is frequently made use of. Will some of our salmon anglers kindly state what is understood by that term? So far as I know of the habits of salmon, with the exception of spent fish, the term is a misnomer. I would also esteem it a favour if any would give me the dressings of the "Crow-wing" and "Death" salmon flies by the same author.

Barnard Castle. William Sang.

Giant Cuttle Fishes.—In November 1873, another calamary or squid of large size was met with off the Newfoundland coast. On this occasion the animal was brought ashore in the fishermen's nets. The body was 7 feet in length, and the tail-fin 22 inches broad; the two large arms were each 24 feet long, and the eight shorter arms 6 feet in length. The total length was 32 feet; the eyes were 4 inches in diameter, and the number of suckers was estimated at 1100. Between 1870 and 1875 various specimens of similar giants, attaining a length of from 30 to 52 feet, inclusive of arms, were found. It is probable that these giant cuttlefishes haunt the Newfoundland coast on account of the shoals of cod and other fish with which that region teems. Our own coasts, also, do not want for examples of giant cuttlefishes. A Captain Neill, of the ship *Robertson*, of Greenwich, in 1834 was voyaging between that port and Montrose. On the 22nd of June in that year he fell in with a large sea-monster, which, from the description and sketch given of the occurrence, seems to have been a giant cuttlefish. On Sunday, August 5, 1876, the master and mate of a Norwegian ship saw, off the Scottish coast, a huge animal, also believed to have been a largely-developed cuttlefish. The occurrence was testified to before a Dundee magistrate.—From *The World of Wonders*, Part I., for November.

RIVER REPORTS.

MID-THAMES.

The flood in the Thames is once again running in very fast, and without rain the river will in a few days be in prime roach, jack, and perch condition, the colour, even now, being everything to be desired, in consequence of the mud having been thoroughly cleansed away. At Sonning and Henley I glean that bags of 6 lb , $7\frac{1}{2}$ lb., and 9 lb. of roach have been had with gentles for bait, the water having been clear enough for the fish to delight in such grub after their long enforced starvation. At Hurley, Mr. Davis on one occasion had a pretty little take of roach from the quiet water of the lock cutting, and Messrs. Gerkie, Brooksbank, and Thompson have been astonishing the pope. From Maidenhead water, a Mr. K. this week had on one occasion 16 lb. of excellent roach from one hole, all the fish being taken with lob-worm. Thursday evening: Rain has been falling to-day, and snow also, but the river is still dropping, and is in fishing trim, especially for roach in quiet bits and eddies.—MARLOW BUZZ.

Ancholme District.

Owing to increasing cold, but few anglers have been out during the past week, and the sport has only been moderate. There are a few trout at Harlem Hill Lock, which have thus far escaped the ravages of the pike. I took a nice lot of Fontinalis eggs from fish of my own rearing on Saturday last. Some of these will go in due course to replenish the ponds at the Manor Fishery, others I hope to present to stock the becks hereabouts.—THOMAS FORD, Caistor.

Bure (Wroxham).

I cannot send a good account for the past week, as, in our opinion, scarcely any anglers would venture out with such strong north-east winds. I have received a report from "some one," signed Chas. Whittaker, The Horseshoes, Wroxham, as follows:—"Some very fine fish have been taken here to-day by Norwich men. About 5 stone of splendid fish have been taken to-day, all bream. Yesterday some good pike were taken by spoon bait. Good fishing now on." This report is dated 12th inst., but a request is made in the corner to slightly alter date. Now I, for one, consider that if a man is not honest about the day he catches his fish, his account of his take may be doubtful. I certainly do not lay this charge to Mr. Whittaker, as I am informed on good authority he has denied any such catch being made at Wroxham. There are no prospects at present, as the wind and water prevent all attempts of the gentle art.—ROBERT MOLL.

Chichester.

The weather the past week has again been stormy, but the water remains in good condition. Jack have been on the feed, one of $4\frac{1}{2}$ lb. being the largest I hear of. In the Go-where-you-please Contest this week, the Veteran Roach Angler took first prize with over 3 lb. of fine roach from the Rother. Small roach, perch, and bream, have been landed at the Canal, but of no size worth notice. Lord Sheffield writes me he has captured a fine carp in the private water at Sheffield Park, weighing close upon 19 lb. It has, of course, been preserved. Yesterday (Wednesday) was a splendid day. To-day, snow and rain are struggling for the mastery.—GEORGE F. SALTER.

Derwent (Chatsworth).

The weather in the ealier part of the week being so much more favourable and the water being in a better condition than expected, anglers were again out trying their luck, and several good takes were made, bottom fishing being excellent; but grayling have not taken the fly on the top as freely as they have taken the worm on the bottom. Fly fishing was not so successful, one angler catching one brace only in two days, owing, no doubt, to the water being in a slight flood. If the weather had continued favourable sport would have been good by the end of the week; but the weather to-day (Thursday) has been dead against fishing, there having been a lot of rain and sleet combined which has rendered fishing impossible. There is a favourable change this evening, and if it continues prospects for the coming week will be good.—WHEATSHEAF HOTEL.

Great Ouse (Bedford).

Last week one of the members of the Bedford Angling Club caught, whilst fishing for pike with gudgeon, a fine chub, weighing 5 lb. 3 oz.—PETER PEDAGOGUE.

Ilfracombe.

Sea fishing.—The weather this week has been most unfavourable for all fishing. However, when an opportunity offered all boats made a start, and have returned with good catches. Three and four maize of herrings each boat have been the average at a haul, a few boats brought in seven maize each, and some fine conger and hake have been caught with ground-lines. A cod of 24 lb. and a few conger were caught from the Jetty with handlines. Weather at present very squally.—E COMER.

Leicester.

The latter part of last week being fine, was more favourable for angling than has been the case for some time lately, as the waters had gone down considerably by Saturday; but still there was plenty of colour in them. In the quiet places several were trying for roach; but no good catches were had. At the earlier part of this week the weather was fine, and a number were out trying for pike, but those taken were only small fish. In the locality of Aylestone matters are very quiet; but it only wants better weather for some good sport to be had here, as there are some capital chub in these waters. There have been but few anglers visiting Barrow-on-Soar and The Wreake, the continued rains having being the means of keeping them away. The weather on Thursday was very cold and stormy; and unless there is a change for the better but little will be done during the next few days.—ALERT.

Medway (Tonbridge).

The water on Saturday and Sunday was running nicely, when down came the rain again, and the river is as thick as ever. No chance of its being fishable for some days.—YE MEDWAY WATER RAT.

Nene (Northampton).

On account of the flooded state of the river, I have only to record small takes of fish. On Monday last Messrs. Johnson, Burrows, and White, members of the Northampton Working Angling Club, when fishing in the canal, Mr. Burrows took a nice pike of $7\frac{3}{4}$ lb., Johnson and White taking some nice roach, the largest scaling 20 oz . The members of the above hold their next series of prize fishing on Saturday, when prizes to the amount of £2 10s. will be competed for in the lower water.—T. F.

Thames (Chertsey).

I am glad to say the water is falling fast and brightening as well, so that by the time the water gets low enough, it will be in order for fishing. If the weather is at all favourable, I hope to have a good report next week with jack and perch. Any gentlemen coming to fish Chertsey had better look to their jack tackle, as I think there are one or two here will test the tackle. Those who come first will stand best chance, though my best jack last winter was but 13 lb. Still there were larger ones that got away, unfortunately for me. The gentleman I fished with last winter has left Chertsey, or I think we should have had one before this.—JAMES HASLETT.

Thames (Eynsham.)

I have not been able to send you any report of angling for some few weeks owing to the continued wet and stormy weather. The floods have been very serious in this neighbourhood, so that there has been no chance of fishing. I am glad to tell you the water is now gradually getting into the banks, and we may expect next week to get to work again amongst the roach and perch. Mr. Hobden and a friend came down on Wednesday morning. I went with them to the Evenlode, and we each had a very nice take of fish, including roach, perch, three splendid dace (one chub weighing nearly 3 lb., caught with roach tackle.) Several jack have also been caught this week with line bait. Altogether the prospects for next week look very encouraging.—W. B. HOWE.

Thames (Goring).

Water now in good order for jack and perch—a little too high; by Sunday, if it keeps fine, water will be in prime order for all-round fishing. We have had a lot of snow here, but I do not think it will hurt the water much, unless we have a lot of rain. Have nothing to report in the way of fishing—no boats out. Prospects: cannot say much about it at present.—JOHN RUSH.

Thames (Oxford).

Since I last wrote the water has sunk about 10 inches or a foot, but I cannot give the exact number of inches, as when I called on my friend, Mr. Harris, who keeps the register, he was absent from his office; but I was informed by one of his navvies at work on Magdalen Bridge, "Why it a'h fallen from t' top o' yan culvert, mon, since Friday," and on measuring the place indicated I found it was just about 12 inches, and although the stream is still running very swiftly, it has toned to a fine green, and is in good condition for fishing. Several anglers were out on Sunday, but very few fish had been taken; the principal catches consisting of small roach and chub. A rumour was current in the town on Saturday of a 25 lb. bag of perch, in the slack water at the junction of the canal and the Wolvercott-mill stream; but on inquiry I find it is a case of "our cat and another," the truth being that six over a pound each were taken out of the narrow cut between Godstow Lock and the bridge, a place I intend to visit next week if the Post Meadow path only becomes passable. A nice jack of 3 lb. was caught in the old river on Monday, by a man named Wilson, whilst fishing for perch with a worm, and I met a working man on Wednesday who had got four chub, the smallest 1 lb. and the largest $2\frac{1}{4}$, from the bridge-holes in the canal between Thrupp and Wolvercott; this, with the exception of a few small roach, also from the same water, but of a size not worth recording, is all the sport I have heard of during the past week. About three inches of snow fell during the night, but if the fine weather of the last few days continues, we may once more expect some sport.—CHERWELL OTTER.

Thames (Twickenham).

Wind north-east. I am sorry to say we have had another rise of water this week, but this day it has fallen about six inches in the upright, and the water is a good colour for roach fishing, and those anglers who do not object to fish in the eddies are certain of some good sport. The fishing competition between members of the Richmond Piscatorial Society took place on Wednesday, which resulted in Mr. W. Hester winning the first prize, viz., five guineas, with 5 lb. 4 oz. of dace, which had to measure 7 inches; and Mr. Johnson, of Cross Deep, took second prize, with 4 lb. 1 oz. of roach, which had to measure 9 inches, but his day's take of sizeable fish weighed 15 lb , and most of the fish being roach, and measuring from 8 to $8\frac{3}{4}$ inches. These were the finest lot of roach, both for size and condition, that I have seen taken in one day this season.—ALFRED PERRIN.

Trent (Newark).

The water this week has been clearing down rapidly, and the "hope that springs eternal in the angler's breast" was once more in the ascendant; for we were looking forward to being able to "point at one" by Saturday or so; but, alas! for human hopes and expectations, for rain has fell more or less heavily all day to-day; so I should suppose the water will again come on thick and unfishable. A friend and I had made arrangements to look after some of those giant chub, and offer them an attraction in the shape of a lump of savoury pith. We thought the water would be good enough for that by Saturday; but I am sadly afraid the rain of to-day will spoil that little arrangement; but, however, we must hope for the best; and if there is not much rise in the river, a few cockspurs, or if getable, a few gentles, should kill a few roach and dace; but beware of the ground bait—use that very sparingly; for the fish have had a regular gorging from the late floods, and only a nice little tit-bit will tempt them.—THE TRENT OTTER.

Witham (Boston).

For nearly a month now angling matters have in this district been all but at a standstill. Flood has succeeded flood, and as soon almost as the waters have got to a fishable condition they have been again spoilt by another downfall. At the present moment the river and drains are fairly in condition, but another storm is looming and all may be quickly over again for another few days. And in addition to the unfavourable circumstances of the water, atmospheric conditions have not been of the best. Under these circumstances it is no wonder that reports are light. Of sport there has been some, and pike have been killed at Chapel Hill, Leake, Kirkstead, Frieston, and other parts. Among the best fish taken, I may mention one of $7\frac{1}{4}$ lb., which fell to the rod of Mr. Faulkner, of Boston, one of 10 lb. to Mr. Moseley, of Sheffield, and one $6\frac{1}{4}$ lb. to Mr. Taylor, of Boston. These are in addition to other lighter fish, and some anglers have had in their creels as many as four or five. I cannot at moment say much in the way of encouragement for next week; but if the air will become dry, crisp, and bracing, we may have some chance.—The Yellow Belly.

Wye and Derwent.

Both the above rivers have run down wonderfully during the past week, and are now getting into proper condition for grayling fly fishing, especially the higher lengths of both rivers; and if the rain will only keep off we ought to have some first-class grayling fly-fishing on these rivers up to Christmas. Sport since my last report with the bottom fishers, on various parts of the Derwent, has been first-class, and some excellent baskets of grayling have been killed, chiefly off the Darley Dale Club waters, between Roms'ey and Matlock, with cockspur, worms, and maggots. There have been several pike killed on the lower lengths of the Derwent, with small dace for bait; the largest fish being over 7 lb. weight. There are very few gentlemen visitor anglers down in Derbyshire just now; no doubt they are after the "long tail" shooting.—George James Eaton.

Yare (Norwich).

As far as I can ascertain, only a few ardent fishermen have been out since I sent my last report, and they were out the latter part of last week doing fairly well amongst roach and bream. This week I have heard of no one being hardy or enthusiastic enough to try their luck, and, all things considered, I commend them for their good sense, the only thing likely to be caught being a bad cold. Prospects, nil, without decided change; at the time I write a gale is blowing, and snow and rain are falling.—Robert Moll.

Yore (Hawes).

Two or three very nice dishes were made at the beginning of the week. Mr. Jas. Hasseltine killed two brace, and Mr. M. Willan two and a half brace on Monday afternoon in a very short time and space. The only obtainable bait being the roadside and brandling worms. The barometer is falling, and there is every appearance of a fall of either snow or rain, very probably the former, as it is very cold. The water is at present very low and clear. Trout seem to have made great progress with their spawning operations, some of the best ground being literally filled with "reds." I am sorry to say I hear of poaching in the runners; but I hope the report is exaggerated, although there is no doubt that quantities of trout are being continually taken for the sake of their spawn.—Jos. Corry.

CLUB REPORTS.

AMICABLE BROTHERS' ANGLING SOCIETY.

The pegged-down match in the river Lea, above the Blackpool, resulted in the usual manner—thirteen sat down. Only one prize was taken, the winner being Mr. A. Plumstead. Nothing daunted with the bad luck, the members will fish for the remaining six prizes on Sunday next, at Cheshunt Mr. Arnold, roach and dace, 1 lb. 10 oz.; Mr. Partrick, roach, 1 lb. $6\frac{1}{2}$ oz. Next Wednesday, general meeting night. All members are requested to attend, for alterations of rules, and election of trustee and all officers of the club.—T. Worledge.

Nov. 12.

DUKE OF NORFOLK ANGLING SOCIETY.

The members of the above society fished a match last Sunday, when the following proved successful in taking prizes:—The first, given by our worthy host, Mr. Grey, was taken by Mr. Allen with two jack; the others being taken by Mr. Stone, 1 jack; Mr. Young, chub; Mr. Pates, dace; and Mr. Lallam coming last with a nice roach, for which he received a winch given by Mr. Reed, of Blenheim Crescent.—G. Avon, sec.

GREAT YARMOUTH PISCATORIAL SOCIETY.

The above society held its weekly meeting on Monday as usual, when the secretary reported 24 lb. weight of jack caught by Mr. Bennett, of Ormesby, and one member had actually given away a roach weighing $1\frac{1}{2}$ lb., caught in the Bure, he being under the impression that it could not be weighed-in, having been caught on Sunday, and this fish would very likely have taken the prize offered by Mr. Marston, of the Fishing Gazette, for the largest roach taken in November, especially as the weather now is so very unsettled, and the water very thick and not at all in good condition. The secretary also called the attention of the meeting to some illegal netting, and that he was acting in conjunction with the secretary to the Bure Preservators, in attempting to stop the same, and it would be as well for all to know that this society is determined to use every endeavour to stop the liggering and netting, and will expose it in every way possible, until any gentleman to whom it may refer, stop it, whether on the river or Broads; if even it does affect the secretary in his trade, commercially speaking. In one word, the secretary says, Stop the ligger, stop the net, and do not encourage the renters of waters who have them for use by going to angle after the net and ligger has been used; as it is only fooling an honest angler by sending him to these places where this is done.—J. Lark, sec.

KNARESBRO' STAR ANGLING CLUB.

On Tuesday evening last the members of the above club held their annual meeting at the house of Mr. Chas. McNichol, when upwards of thirty sat down to an excellent repast; Mr. Samuel Rhodes occupying the chair, and Mr. J. Booth (Harrogate) the vice-chair. After the cloth was drawn, the accounts of the past year were read, which showed that at the commencement there was a balance in hand of £3 2s. 9d., which, with the contributions of members, honorary members' subscriptions, and sundries, made a total income of £13 2s. $7\frac{1}{2}$d., and the expenditure £9 5s. 3d., which left a balance in favour of the club of £3 17s. $4\frac{1}{2}$d., a result which was greeted with hearty applause. The usual routine business of choosing officers for the ensuing year was then proceeded with, and this concluding the business proper, the usual loyal and patriotic toasts were drunk. The toast of the evening, "Success to the Star Angling Club," coupled with the names of the president and secretary, Messrs. George Thompson and J. Winterburn Mason, having been proposed, the latter gentleman responded, and stated the society was in a flourishing condition, its members and funds being on the increase. Some capital songs were sung between the toasts, the list including the "Host and hostess," and the "Honorary members," to both of which hearty votes of thanks were accorded; the latter part of the evening being spent in conviviality, pleasantly terminating with the singing of "Auld Lang Syne." The following were the principal prizetakers:—Trout: 1, J. W. Mason; 2, B. Robinson; 3, G. Thompson; 4, J. W. Mason. Grayling: 1, 2 and 3, R. Mason; 4, G. Thompson. Pike: 1, J. W. Mason; 2, C. Kay; 3, J. W. Mason; 4, C. Kay.

LITTLE INDEPENDENT ANGLING SOCIETY.

Our members were out last Sunday, but met with very little sport. Mr. H. Moore showed a very handsome jack; Mr. Keene, some nice jack; Mr. Hurwood, some roach.—W. H. Evans, sec.

Nov. 16.

ORIGINAL ALEXANDRIA ANGLERS.

Most of our members were out on Sunday last, the following weighing-in fish:—Mr. M. Dymond, some good jack; Mr. Blackledge, roach and perch; Mr. E. Dymond, jack; Mr. Towndrow, roach; Mr. Tiffin, chub; Mr. Sharp, jack; Mr. Huskison, dace; and Mr. E. Brockett, roach.—E. Dymond, sec.

RODNEY PISCATORIALS.

On the 12th inst. we visited friend Luker, at Walton-on-Thames, who informed us that we could get to the Barge "Cut," and might be able to get some fish there. After having "a glass of ale" we departed on our way, in a dense white fog. While crossing the field I could not help thinking how different it was now to what it was on a former visit. Then these fields were covered with water, now they were covered with frost and fog, and here and there were relicts of "Father Thames's high jinks" on shore. "There are those old boots" exclaimed a member, and he made a dash at them; but stopped suddenly, for by the side of those same old boots lay a jack about 4 lb., who bore evidence of having stayed on shore to long, and I thought of Brougham's "Babies," and the massacre of innocents, in spite of the pater's watchful eye, that must occur when Father Thames comes on shore. Passing these, we come to the wallflowers, the briars, and brambles, neither of which seemed the worse for being submerged. We reached the Weir Hotel. Here could be seen the effects of "the high jinks," the footpath having been washed away, and the worthy hostess informed me that the water rushed past the house like the weir itself. Passing over the iron bridge, we come across about 10 more brothers "Bobs" busy trying their hardest to get acquainted with a fish of some sort. Finding a "shop," we were all soon "on the job," and in spite of the cold, the fog, and the noise made by a steam tug that was moored close by, we stuck to it till about two o'clock, and did not get a fish among our party, and only a few small perch among the others. The fog having now cleared off a bit, the engineer of the tug entertained us with a selection on the waste pipe, and steamed out of the cutting. Shortly after Mr. Marsh sprang up, as if he had been blown up with a box of his own fireworks. "I have got one," he exclaimed; and so he had, he had got a gudgeon $5\frac{1}{2}$ inches long. "They are coming on." Down we sat and eagerly watched our floats till 4 o'clock; time was now called, but in hopes of catching something bigger we kept on till 5. The shades of evening were now falling fast, and hastily packing up our traps, we retired to the hotel and refreshed ourselves with some ale, and after a sharp walk we reached Walton station, just in time to catch our train. Mr. Marsh was declared the winner of the first prize, viz., 4 lb. of tea, given by Mr. E. F. Diggins. Our next competition will take place on December 3, for the following prizes:—(1) Tankard given by Mr. G. Hockley; (2) Fireworks, given by Mr. Marsh; and four other prizes left from last competition.—Pixie.

Nov. 15.

ROYAL GEORGE ANGLING SOCIETY.

Last Sunday Mr. Guvnan had a very nice show of roach and dace, and Mr. Palmer, a pretty lot of dace from the tidal waters. Those members who tried higher up the river were not so successful, and two or three who fished hard at Springwell returned home without having had a single "knock." The jack-fishers were very busy at the above-named fishing, and as nearly every man employed two rods, I estimate that in about 300 yards of the back water there were quite forty live baits laid out. The large red floats dotted about on the surface of the stream, gave it the appearance of having broken out with an eruption of some virulent disorder. I don't think, though, that it suffered much, for with the exception of one young man whom I observed with three or four diminutive specimens, which I should very much like to have seen weighed, I believe the crowd of noble sportsmen returned home jackless and forlorn. A remarkable trout was captured and returned to the water—I say remarkable, because when I first heard of it, it weighed $1\frac{1}{2}$ lbs., and various informants having subsequently given me its weight as 2, $2\frac{1}{2}$ and 3 lbs., I was assured about three hours after its capture that it would have "gone" fully 4 lb. If it continues to increase at this rate, I should advise my brother piscators to look out for it at the commencement of next season. Mr. Guynan takes the handsome clock presented by Mr. Trotter, for one month's gross weight. The club is now organising the annual Christmas Sweepstake, for which all members may compete, however recent the date of their election.—C. W. W. Bernhardt, hon. sec.

THE PISCATORIAL SOCIETY.

I beg to call your attention to the following fixtures:—Monday, November 20, pike competition, any public waters. 2nd Shentonian prize, Thames only; not won on 16th ult. December 4, chub competition, any public waters. December 11th, smoking concert. For full particulars as regards the Competitions, see list of prizes and circulars.—James Lander, hon. sec.

THE STOKE NEWINGTON ANGLERS.

The show of fish at this club on the 12th inst. consisted of three jack taken by Mr. W. Robinson from the Lea, weighing 8 lb. 14 oz., and one jack by Mr. C. Martin weighing 3 lb. 13 oz. Other members were out, but did badly, especially the roach anglers. Members are reminded that in addition to Mr. W. Robinson's prize for the heaviest jack taken during the month, there are also prizes for the heaviest weight of perch and dace, and the heaviest gross weight of any kind of fish taken during the same time. Due notice will be given of the pegged-down match.—T. Gretton, secretary.

ANSWERS TO CORRESPONDENTS.

G. P., Liverpool.—We do not think that any newsagent sells the *American Angler* in this country; but you will see details in the advertisement in our columns.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

NETTING OF RESERVOIRS FOR THE THAMES.

Sir,—As it is not intended to net any more of the waterworks reservoirs this year, it may be desirable to give the particulars of the distribution and quantity of fish that have been removed into the Thames.

From the reservoir of the East London Waterworks at Upper Sunbury, which was the first to be netted, about half a ton weight of fish, principally small perch, were put into the Thames below and above Chertsey Weir.

From two of the reservoirs of the Chelsea Waterworks at Sunbury, over four tons weight of good fish were turned into the Thames. Three-fourths of this quantity were put into the reach of water between the two weirs of Sunbury and Moulsey, the principal portion of the three tons close to the waterworks and in front of Messrs. T. and A. Stroud's boathouse. The remainder, of about one ton weight of fish, were placed at Walton Reach, above Sunbury Weir, Shepperton, and at Chertsey.

From the reservoir of the West Middlesex Waterworks at Barnes, about half a ton weight of good fish were turned into the Town's End Hole at Kingston.

There are three other good reservoirs to be netted in the spring of next year, and other waters are at the disposal of the committee.

The expenses of netting and distribution of the fish this year amounts to a very large sum, and it now remains for the inhabitants of the districts benefitted, the anglers and angling clubs, to show their appreciation of the work by contributing such an amount as will entirely cover the sum thus necessarily expended in the removal of fully five tons weight of good stock fish.—I am, &c.,

13, Cannon Street, E.C.,
November 15, 1882.

Thomas Spreckley
(President and Treasurer of the Thames Angling Preservation Society).

THAMES ANGLERS' RIGHTS AND THE LORD MAYOR'S SHOW.

Sir,—I enclose cutting from the *Echo* of this evening, which I thought you might make use of in your most valuable paper.

Perhaps when anglers see that the fact of there being a fund for the defence of their rights is being made public, those who belong to clubs will feel a little ashamed for it to be known how very paltry the subscription from the numerous London clubs have been.—I am, &c.,

H. A. Vincent, hon. sec. Watford Piscators.

The following is the cutting Mr. Vincent refers to:—

"This year the Epping Forest banner was accompanied by another, bearing the motto, 'The Corporation and the Rights of the Thames Anglers.' If the Corporation will fight the battle of the inoffensive and much-persecuted disciples of Izaak Walton, we shall be eager to acknowledge such good service; but it is a fraud upon the public to take credit for a battle which has yet to be fought. However, the Corporation, having taken credit beforehand, cannot with a good grace draw back.

"We must not be surprised that the people in the streets are gulled, for a contemporary, who ought to know better, reports that this banner, 'boldly lettered,' proclaimed 'how the rights of the unobtrusive community of anglers on the Thames had been preserved.' Those rights have not been preserved; they are still in dispute; and the Corporation of London has not yet undertaken the burden of their defence. We hope it will; but at the very time when the anglers are endeavouring to raise a fund to defend their rights it is too bad to advertise in the streets of London that these rights have been already won."

DR. BRUNTON AMONG THE GRAYLING.

Sir,—Among the many noted anglers past and present who have fished my stream, a catch of twelve brace of grayling in *one day* was always considered a big event. But what are we to say of Dr. Brunton, who last Thursday evening at the Gresham weighed in six grayling, and stated that in less than four hours he caught other twenty-five brace, *i.e.*, an average of one in every four minutes, all on the *finest-drawn gut* and No. 1 hook, and of course landing them with his hand, as he scorns (so he says) to use or carry a landing-net? Many frequenters of my stream are not only anxious to know, but will feel obliged by the doctor explaining how he accomplished it.

The six grayling were of fair average size, but your correspondent is surely mistaken when he described them as the "finest ever weighed-in, &c.,"—they probably were the finest ever weighed in at the Gresham. I am inclined to think he has had few opportunities of seeing fine grayling, and probably none of catching those 2, 3, and even 4 pounders which are taken from your obedient servant,

The Barge River.

Winchester, November 15.

[We refer the old Barge River to Dr. Brunton's own account, which we publish elsewhere, and need hardly say we implicitly rely on the Doctor's statement.—Ed.]

GRAYLING-FISHING, &c.

Sir,—Thank you for the information you so kindly gave me in yours of the 8th inst. I have not had a day since one in the last week of September. That day it blew hard after the first hour or so, down stream, of course. Part of the time there was a bull with a herd of cows in the only part of the meadow which was fishable. An embankment was betwixt us part of the time, and the bed of the river was muddy, which suited some ducks and geese, but not the angler. I got three dace, and lost the only trout I rose. I tried 13 or 14 different flies over him, and at last, some time after hooking him, contrived to scare him away, after which I was disconsolate.

I am much obliged by your inserting my two attempts at answers to queries in the Fishing Gazette. I wish I had more time, and I would endeavour to reply oftener than I have done.

Methinks, who ever wrote about Dr. Brunton and his grayling was not very well up about that fish, as C. Pennell, in his "Angler-Naturalist," and also in his work on fishing, mentions a Mr. Parker (? R. L.) taking 3 grayling in the Hampshire Avon, near Ringwood, which weighed 12 lb.. Mr. F. F. also this year states in the *Field* (part of the very article you preface the test-fishing with), as landing five or six fish from the Itchen, going 2 to 3 lb. each, besides others of 1 lb. or over. I wonder if Dr. B., as usual, landed all his fish without a landing-net, how many he lost in trying to land, and what size those were which he returned.

I have twice taken two brace in a day which weighed 6 lb. 5 oz. and 7 lb. 2 oz., from water which had been pretty well fished, without getting any others of over ½ lb., or perhaps ¼ lb. I believe, however, that grayling are seldom weighed in at London clubs. Please excuse all this scribble, and again thanking you for all the information you have so generously given to me, though a stranger.—I am, &c.,

J. J. B.

Hull.

P.S.—Mr. Francis, in his book "On Angling," unless my memory fails me, states that Pat Hearns, of Ballina (Ireland), for a wager, threw a salmon-fly 42 measured yards (126 feet), which beats the Yankee's cast of 116 feet, being the longest distance on record in salmon-casting.

Mr. Prime (W. C.) in his book "I Go a-Fishing," therein mentions a cast of 105 feet with a twelve-foot split cane trout rod in some American lake, I believe. I remember, when this work was reviewed in the *Field*, it was evidently not credited.

J. J. B.

A DAY'S GRAYLING FISHING.

Sir,—The other day I left London for my autumn holiday, to pay a visit to some friends living on the Wiltshire Downs, and have a little shooting and fishing; but had no idea that the rain was likely to continue so long, as I found out to my discomfort, causing the river Wylye to overflow its banks, and the surrounding meadows, making fishing, as I imagined, out of the question. What was to be done? I could not stay in the house, so with mackintosh and sou'wester, determined to brave the weather.

The river rises in Warminster, and after flowing some miles, passing near Stonehenge, of Druidical celebrity, meets the Nadder close to Salisbury. It abounds in trout, grayling, and, in the deeper water, jack, roach, dace, and eels. Being only a few minutes' walk from the water, I soon commenced; and, though it was a complete downpour, my fly was hardly out before it was fast into a fine grayling. The trout were also rising in all directions. I took sometimes two at a time. This continued through such a storm of wind and rain as had not been seen for some years. On my return, I found I had taken eleven grayling, the largest 1 lb 9 oz., and had put back in the river fourteen trout. I was well satisfied with my day's sport,

Arriving at the house, a strange incident had occurred. A partridge (as we supposed, chased by a hawk) dashed against the plate-glass window of the drawing-room, smashing it to atoms; but, most astonishing of all, the poor bird was unhurt. My friend's wife at once said it should not be killed, but have its liberty; and carrying it out into the field, it flew from my hand as if nothing had happened. So ended my day on the Wylye.—I am, &c.,

Hartry.

GRAYLING-FISHING IN THE NORTH: EYED HOOKS AND FLIES, &c.

Sir,—Allow me to thank "J B. J." for his letter of last week respecting the use of double-handed rods in fishing for trout and grayling. I have never known them used in fine fly-fishing before. That idea about carrying the landing-net is worth knowing. Since I made my enquiry in the Gazette three weeks ago I have seen the illustration in Foster's book, and therefore quite understand what "J. B. J." means. As to his enquiry respecting grayling-fishing in this county, I am sorry I cannot give him definite information of the streams nearest to the corner of this big county where he resides. The streams about Pickering and Helmsley have grayling in. Further away, however, the Wharfe, almost anywhere above Arthington, up to Kilnsey, the Swale from Catterick Bridge upwards, the Ure from Boro' Bridge upwards, abound with grayling; but it would be a very risky business with such unsettled weather as we have lately had to travel far for a day's grayling fishing.

Respecting some of the other communications to the Gazette of last week, I for one would be greatly obliged to Mr. Hall if he would repeat his instructions for dressing flies upon the eyed hooks. I think I could succeed in tying flies upon them, but I would much like to hear what the inventor himself says on the subject.

Then, with respect to the "Jack Incident," Mr. R. Woolfall asks if any of your readers had a similar experience?" Well, I do most sincerely hope that if any of them have had a similar experience to that poor roach he tells of that they will by all means give us an account of it. It would be so interesting for a veritable Jonah to give us his experience.—I am, &c.,

Yorks.

FLIES ON EYED HOOKS, &c.

Sir,—I fully intended to have answered "Bittern's" query last week; but I was much occupied, and after a hasty perusal of my Gazette it was thrown aside and forgotten, In the *Field* of August 5 I gave a description of the method I usually employ, and possibly this may help "Bittern." It was written in answer to a question similar to his, and two amateurs have written to me since with patterns of their handiwork. My method makes an excellent floating fly, the wings and hackles stand out and keep the fly riding naturally on the surface; and for fishing with a dry fly it is everything to get a fly which will *fish* well. Another advantage is that the eye is always clear for tying on the gut; the fly is fastened off behind the wings, and no varnish is used. It is a great nuisance to have to stand by a riverside, when there is a furious rise on, picking out the varnish with a pin from the bunged-up eye, before the gut can be threaded.

I wish some good tackle-maker would tie flies on my plan. I know plenty of men who would send orders at once if they could rely on getting a real floating fly—one which sits up and won't lie flat on its side. I haven't time to tie all the flies I use. Those I buy are neat, pretty, and serviceable, and quite worth the price, but they don't float anything like as well as my own, and the eye is very frequently choked up with bits of wing feather and varnish.

If any reader of the Fishing Gazette expressed a wish to that effect, I would re-print my letter from the *Field* in these columns.

With regard to double-handed rods, I think it is solely a question of habit and practice. Personally, I must confess to being clumsy with a big rod; but I know places on the Test and Kennet where it is an immense advantage, if not an absolute necessity, to use a rod of 14 or 15 feet. I have frequently seen Mr. F. Francis using the finest tackle and tiny flies with such a rod—and there is no loss of delicacy and accuracy in the cast. The way he makes a little dun on a OO hook come floating down, skirting the bank, within an inch of the sedges where the big fish lie sucking down the flies, would astonish some of the advocates for single-handed rods.

With a big rod and fine tackle, small flies are apt to whip off in a provoking way; but here eyed-hooks again come to the rescue, as they stand so much more whipping than the ordinary kind. Of course the angler must sling his landing net according to his own fancy, but for comfort and convenience it seems to me this is a *sine qua non*, no matter what sort of rod is used. If the net must be carried in the left hand, I am not surprised that it has been called by some anglers "an inconvenient convenience."

In the American tournament recorded last week, it appears that on the first day the prize was won by a single mark. Now, if the way in which the marks were made up be examined, surely everyone must be agreed that the second man would probably kill the most fish. Beyond twenty yards accuracy and delicacy are everything, and worth far more than a few extra yards in distance. Few ordinary anglers can cast 25 yards, and a man who can cast 20 yards neatly and lightly is probably (in the usual meaning of the term) a better fisherman than he whose reputation is for long casts—25 yards or more.—I am, &c.,

H. S. HALL.

[We think we can answer for very many of our readers, including some abroad, that they will be glad if Mr. Hall will send the description. We should for our own part.—ED.]

METHODS OF CASTING, &c.

SIR,—Surely the method of casting a fly, described at page 538 of the FISHING GAZETTE, as used by Mr. Hawes, is simply that taught, in perhaps slightly different words, by many English writers, notably Stuart (Scotch, by the bye), and by Mr. Francis, in his 5s. book on angling. It is certainly the method I have always used, learnt from these books. The slight wrist turn is what they recommend to prevent whipping off the fly; but they call it giving a long narrow horse-shoe or pear-shaped sweep, and the not allowing the rod to go back more than about 30 degrees is simply to prevent catching your fly in the grass behind. This plan of casting is especially suited to a stiff American cane rod, and I notice that most Hampshire fishers who use what I call whippy English rods, do not throw their fly in this way, but more or less roll out their line in the way ascribed to Mr. Prichard in the American contest. Allowing the line to extend itself to its full length behind is, I think, the main point to be attended to in the former plan of casting, which I venture to call the proper one, but which cannot, I think, be ever used in perfection with a whippy rod. I use an excessively stiff American rod, 10 feet 9 inches, and in casting, the line is sent straight out till it is nearly over the spot where I wish it to fall, and then the last yard or so of the collar falls gently on the water, followed by the fly, for I will not pretend to say the fly falls first, for I don't believe such a thing ever happens, except where it is blown out by a strong wind, as in blow-line fishing. It is a pity that in the American contest the standing-place was raised above the water—for this, of course, exaggerates very much the casts made by at least, I should think, four or five yards. After all, these trials are rather unsatisfactory, and cannot, I think, serve any useful purpose. The least alteration in the strength and direction of the wind and the amount of moisture held by the line are continually varying quantities.

A correspondent asks about landing nets. I have tried many, and find none for convenience equal to the fixed wooden ring, with a spring catch joint in the handle, which is easily flung out straight with the left hand, while holding your rod with the right. It hangs over the shoulder either by a light strap of its own, or through the strap of the bag or basket. I prefer the former, for this reason: When I want to put on my waterproof coat, I put the strap of the landing-net under my other coat, which thus protects the waterproof from the joint of the landing-handle, and yet it can be easily got at when wanted. Waterproofs are very delicate things, and a fishing-basket or the joint of the handle, if allowed to rub against them for half an hour only, renders them useless.—I am, &c.,

B. M.

HACKLES AND FEATHERS.

SIR,—Touching "Bittern's" query as to Andalusian feathers for flies. Hackles from these fowls are much used in Devon, where flies of a blue hue are a necessity for early fishing. Blue game cocks will, however, furnish better feathers, and if he be desirous of keeping blue fowls for fly-making purposes he will find it to his interest to procure if possible those of a blue game or blue dun game breed, in place of the Andalusian.

Mr. R. D. Frost mentions the dyeing of Andalusian feathers. I always heard that the great objection to dyed hackles—hackles dyed of a bluish dun colour, I mean—was that the dye soon washed off. I have seen flies dressed with dyed hackles which lost all their colour after being a short time in use. If he could describe the manner of using the Indian dyes he alludes to it would perhaps be of interest.

I observe that "J. B. J." requires some large dun hackles, and enclosed herewith are some that may possibly be useful to him. Yours, &c.,

Tiverton, Nov. 13. R. A.

QUERIES ON FLY-CASTING.

SIR,—The report of the *Forest and Stream* Tournament, and your notes on it, will make many a fly fisher anxious to take a new departure in the art of casting, and I write to express a hope that yourself and some of your able correspondents will kindly give the results of experience as to different methods and styles.

Should not the weight of the line in a certain number of yards, as well as the length of rod, be given, to afford material for strict comparison in casts made for distance?

Will you please explain what are to be understood as the determining lines, when it is stated that, "on the back cast, the flies were up in the air at an angle of 30 deg." ?—I am, &c.,

X. Y. Z.

Southsea.

[Our correspondent's queries open up a most interesting subject, and we hope many of our readers will come forward with their views. It is not in the least likely that opinions will all coincide, but it is just this divergence of opinion which makes these discussions so valuable. In reply to the second query, we say that, provided the rods are all under the stipulated size and weight, it would be unfair to make each competitor use the same line. Each has to make the best score he can; and if a man uses a line which is not the best he could use, it is his own fault; if you chose it for him, he would certainly say it was not the best. Every angler we know uses a line which in some respect differs from the others. With regard to the last paragraph, we presume it means the line never fell in the back cast below 30 deg. from the perpendicular.—ED.]

THE RECENT TOURNAMENT.—DOUBLE- AND SINGLE-HANDED RODS.

SIR,—I think the report of the American Tournament you gave in the GAZETTE one of the most interesting papers that has been sent out to the angling fraternity. I expect every year there will be a great improvement, as people practise specially for distance and delicacy and accuracy.

I don't like a light rod for stream or river fishing, unless the locality is wooded, then you must give in to circumstances. My favourite rod is a 16-footer, by Leonard, of Philadelphia. I have used it for several years. Last year, on a clear chalk stream, with finest gear and one tiny fly at a time, I killed over 40 lb. of trout in a day, from ¾ lb. up to 3 lb., and it was all owing to my being able, with my 16 foot rod, to send a light line from twenty to forty yards; and if I fish all day (and I stick to it), my big double-handed rod tires me less than the lightest single-handed rod. I will try and measure some casts when I have an opportunity; and I think I shall go beyond forty yards. If you like, I will let you see my three pet rods—all Yankee rods—16-foot Leonard, 12-foot Conroy, 10-foot Conroy—and you can try 'em if you like. Yours, I know, would be appreciative and careful hands to trust them with.—I am, &c.,

Watford. TALBOT.

[Should much like to see the rods—perhaps we can arrange a day together in the spring, when the trout are "on."—ED.]

FISH AT THE AQUARIUM.

SIR,—Anglers interested in the movements of the finny tribe, their many peculiarities and habits when in confinement, will do well to visit the Westminster Aquarium at the present time.

The barbel are simply splendid, though if they were to reduce the number it would do no harm, and there are some fine bream from the Thames.

Good old specimens of river bream.

I have no doubt the tench (also very fine) would be extremely grateful to the proprietors if they would place some soft material at the bottom of the tank under which they could hide themselves; but I suppose the directors would scarcely do this, as with the proverbial honesty of all caterers for the public amusement, they would not think of taking a shilling under the pretence of showing fish whose habits lead them to hide themselves at this season of the year.

They appeared to be dreadfully dissatisfied with the situation in which they were placed. One fine old fellow, in particular, showed evident signs of disgust as he tried over and over again to make a hole in the bottom with his snout.

After watching some small fry for a long time, I noticed how incessantly they kept taking every conceivable object that came in their way into their mouths, and blowing or puffing them out again, causing, as they did so, quite a stir in the water—now the carcase of a dead shrimp took their fancy, now a particle of weed, now a shell or pebble, and the peculiar quick and sharp manner in which this strange operation was performed was conclusive proof, to my mind, why it is so many bites are lost when roach fishing with paste. Don't forget, *paste*

"What nonsense," says a gentleman to whom I have referred on a former occasion.

His defeat on the subject of the male and female pike has evidently given him the "needle"; however, rightly or wrongly, I cannot agree with him. I will tell you why.

The mere operation of the roach taking in the paste instantly sinks the float, but so quickly is the bait puffed or blown out again (especially if the fish are not on the feed), that, no matter however quick the anglers may be (I refer to men who thoroughly understand all about wrist play), consummate masters of the art though they are, they are often and often too late. In fact, I know—and you know—ordinary roach anglers will lose four bites out of six.

The thing is plain enough: the puff or blow and the strike occurring at one and the same time, the bite is missed, and when the barb of the hook is pointing from the mouth of the fish towards the water, you can easily imagine how bites are continually lost.

Both the bream, barbel, and tench freely indulged in the above habit, but not to the same degree as the smaller fry, and the grandfathers went about the business in a far more methodical and deliberate manner; perhaps the old buffers were testing the material.

I was very much amused at the remarkable way in which one of the bream rolled about his eyes, as much as to say, "I can see you, my hearty," showing the whites thereof like the celebrated "dying duck in a thunderstorm."

And this circumstance induces me to ask you, Mr. Editor, if you believe fish ever go to sleep?

"That is the question."

Hoping yet to hear something definite on the subject,—I am, &c.,

MARK ANTONY.

P.S.—I forgot to mention the jack; they are a study in themselves. Little would one think, to see them perfectly still, with only the fins gently on the move, what a speed and power to destroy they possess.

[We do not think that fish sleep, some of them hibernate. "Mark Antony" has omitted to mention the big Thames trout, and the two or three dozen black bass.—ED.]

PIKE TAKING A "SWALLOW."

SIR,—One of our members witnessed the following occurrence. He was standing on the banks of a pond, preparing his spinning tackle for use. It was a bright summer day, and the swallows were flitting to and fro, and skimming the water, as is their habit. Their flight interested the angler, and he was watching their swift and graceful evolutions with pleasure, when his reverie was rudely disturbed by a commotion in the pond, and he saw a pike make a rush at one of the swallows (which had made a sort of pause, as they do when picking a fly off the water), seize the poor bird and quickly disappear with it in his jaws. The keeper states there is a very large pike in this pond, as he has frequently seen him, and estimates his weight at 20 lb.

I fancy this is the most remarkable incident that has been recorded; at least I have never heard or read of any similar one, and is, I think, quite unique.—I am, &c.,

R. WOOLFALL.

Hon. sec. Liverpool Angling Association.

[We have heard of pike jumping at birds, but never of their catching them.—ED.]

JACK EJECTING BAIT—SNAP-FISHING.

SIR,—In answer to your correspondent Mr. R. Woolfall, I can say that a short time ago I met with a somewhat similar case to that of Mr. Jones' pet pike. The case occurred while pike fishing with a live bait (not very lively then) in clear water. I saw a 2 lb. fish take the bait in his mouth, and just as I had taken up my rod and was about to strike, suddenly cast forth the bait and swim slowly off a yard or two. I then put on a fresh bait, a very lively gudgeon, when the same jack, which I had kept an eye upon, came at it with a rush and made for the opposite bank. I struck and landed him, and on taking the bait out of his mouth found two half-digested roach sticking in his gullet.

I should say that either Mr. Jones' pike was not hungry, or that his behaviour was due to his capricious appetite, which, as most fishermen know, varies from one extreme to the other.—I am, &c., SPIDER.

November 14th, 1882.

P.S.—Is the saddle tackle with live bait a sportsmanlike mode of fishing?

[The "saddle snap" tackle is used in snap-fishing with live bait; *i.e.*, the angler strikes directly he gets a run, hooks the fish in the mouth, and can return it unharmed to the water if too small. Next to spinning, snap-fishing is by far the most sportsmanlike way of pike fishing.—ED.]

THE EJECTED ROACH.

SIR,—Can Mr. R. Woolfall inform me what length of time expired from the moment the jack *swallowed* the roach to the time it was ejected back again into the water?

The occurrence is one of such an astounding nature that I cannot help thinking Mr. R. Woolfall and his friends were deceived.

Every angler knows pike generally swallow fish head foremost, but in this case it might have been swallowed *tail* first.—I am, &c., MARK ANTONY.

[We think it will turn out that the jack only took the roach into its mouth for a minute or so, and for our part we do not see anything very extraordinary in Mr. Woolfall's account; we think he made a mistake in using the word "swallowed." When spinning an artificial fish, we have frequently seen a pike take it tail first, but it was undoubtedly his intention to turn it round and swallow it head first when he had killed it; unfortunately for him it was "a delusion and a snare," and killed him instead.—ED.]

POACHERS AND PROTECTING RIVERS.

SIR,—It was with mingled feelings that I read the letters of E. W. A. and C. O., for I was very pleased to find that there are those who will dare to call attention to the destructive and abominable practice of netting for pot purposes only. But I was very sorry to learn that netting is carried on in other places besides the river between Bristol and Bath, for the prevention of which your editorial note very wisely advises the formation of a protection society.

Now, Sir, I want to ask one or two questions, which, with your usual courtesy, you will do your best to answer. First, to whom should a society apply for power to prevent netting in a tidal and navigable river, where there is a towpath on one side? Secondly, would it be possible to obtain power to prevent fishing of every kind in a non-tidal river, where there is a towpath on one side, and to whom should we apply?

The reason I ask these questions is, that the fish in the Avon are taken by a dozen of these hulking, skulking, poaching, black-legged fellows, with skimming nets, casting nets, dredging nets, dynamite, and other unfair means, and destroyed by thousands every year, and that a society is about to be formed with the view of the preservation of this water.—I am, &c,

Bristol. H. W.

[H. W. will have to find out whether the Crown has parted with any fishing rights in the tidal portion of the river; if it has, he will have to go to the present holders of the rights. A towing path, whether on a tidal or non-tidal river, is private property, and the public have no more right to fish from a towing path than from a bridge. The owners of a towing path cannot grant rights of fishing unless they have bought them. In a non-tidal river all that is necessary is to secure the consent in writing of the landowners owning the ground over which the river flows. If a river divides two estates, the respective rights of the landowners extend to half the bed of the river; thus, if the river dried up, the fence dividing the properties would then be placed along the exact middle of what had been the bed of the river. It has been decided that the owner of one side of a stream has no right to fish beyond the middle of the stream. The best plan would be to get the consent of the owners of the towing-path as well as of the land owners, to the protection of the water.—ED.]

FISHING NEAR LIVERPOOL.

SIR,—May I ask, through your columns, for information from one of your Liverpool correspondents as to fishing in the river Alt, *i.e.*, what portions are free, which are the best places and what kind of fishing is to be had there? If preserved, what are the terms on which fishing can be had. I make frequent visits to Southport, and the Alt seems within reasonable distance of that place.—I am, &c., COTTONOPOLIS.

MANCHESTER AND DISTRICTS AMALGAMATED ANGLERS' ASSOCIATION.

SIR,—In reply to Mr. Ashworth's letter in the GAZETTE of Saturday last, I may just say that the correspondence is before the readers of the GAZETTE, and to them I leave the question—Which of the two is right? for Mr. Ashworth acknowledges that up to April 22 his society allowed fish which were prescribed by law to be weighed in during close season, and the fact remains that the gentleman who caught and weighed in the trout received the prize money given by his society.

With reference to the point at issue, Mr. Ashworth appears to have missed it, as the point was the minute passed by the Association in July last, which called forth my first letter.

Their having managed to conduct their own affairs for over fifty years does not prove they have been doing it right, for, as regards salmon, trout, char, &c., they have, previous to April 22, certainly been in the wrong.

As to Mr. Ashworth's last paragraph, my complaint was made in my first letter to the GAZETTE, and I cannot understand Mr. Ashworth wanting me to put it in the hands of my delegate, unless that he is ashamed of its being made public. Mr. Ashworth must, I think, be a dubious gentleman, for he doubts my being a member of the Association. I may again inform Mr. Ashworth that I am a member of the Association, and I think rather more active than he seems to like.—I am, &c., TROUT.

Nov. 14.

LENGTH AND WEIGHT OF TROUT.

SIR,—During the last season I kept a note of the lengths and weight of all the trout up to 12 inches that I took from a stream in this neighbourhood. The variation of weight in fish of the same length was not sufficient to be noticeable except in one case.

Enclosed I send a note of lengths and weights, which you will see agree fairly well with the scale published in your paper.

Length and weight of trout:—9 inches, 4 oz.; 9½ inches, 6 oz.; 10 inches, 7 oz.; 10¼ inches, 7 oz.; 10¾ inches, 8 oz.; 11 inches, 9 oz.; 11½ inches, 10 oz.; 11⅞ inches, 11 oz.; 12 inches, 11 oz. (weighed the next day, and the only one of 12 inches caught in the season).—I am, &c.,

H. BRADFIELD.

ANOTHER CLOTH WATERPROOFING.

SIR,—In answer to your correspondent's enquiry, "A Waterproof Wanted," in your last week's edition, I beg to submit the following to his notice. It is an exact copy of a paragraph in the work entitled "The Domestic World."

"CLOTHES, TO MAKE WATERPROOF.—Into about a gallon of water put a quarter of an ounce of yellow soap, and let the same boil for half an hour, skim, and when cold put in the cloth garment; let it remain for twenty-four hours; take it out and hang it to drain, and when *half dry* put it into the following solution:—Half a pound of alum, quarter of a pound of sugar of lead, dissolved in three gallons of water. Let the cloth be thoroughly soaked, and then hung to dry. This process entirely destroys the capillary attraction in the fibres and threads of the cloth, and the rain or wet pours off the surface without lodging or penetrating through the cloth. The solution has no effect in altering the texture or appearance of the cloth or article immersed."—I am, &c.

SAGITTARIUS.

Nov. 8.

ACKNOWLEDGMENT.

SIR,—Allow me to thank "J.B.J.," Mr. Frost, and Mr. Howarth for their replies to my queries.

It is most gratifying to be interested in one common cause with the authors of so much obliging and ready courtesy.

Will you kindly post the enclosure to "J.B.J.'s" address?—I am, &c.,

BITTERN.

Cardiff, Nov. 12.

THE TRENT NAVIGATION AND FISHING RIGHTS.

Mr. Justice Denman has just decided a case in which Mr. Martin, owner of a fishery at East Bridgend, on the Trent, claimed damages, £500, from Mr. Leavers, chairman of the Trent Navigation Company, for the "alleged wrongful and negligent user by the defendant of a steamtug on the river Trent." The plaintiff's counsel based his client's claim on the argument that the towing by steam-tugs was not a lawful means according to the Acts passed for the navigation of the river Trent.

Mr. Justice Denman interrupted the learned counsel, and remarked that the Court was decidedly against the view which he had taken of the acts. They were clearly of opinion that the acts committed by the defendant in using steamtugs gave no cause of action against him, as he was only adopting a practice which had been in vogue since 1857.

Their Lordships accordingly entered judgment for the defendant, with costs.

ANGLING RIGHTS ON OULTON BROAD.

A SUBJECT of some little interest to anglers and owners or lessees of fresh water fisheries has been brought before the Lowestoft Bench. The case arises out of a claim to the exclusive right of fishing over a portion of Oulton Broad owned by Mrs. Caldecott, and which is disputed by a gentleman named Bottely, who asserts his right to fish over waters open to navigation, or where there is a tidal stream. The point is an important one, and has already given rise to litigation elsewhere. The Magistrates held that they had no jurisdiction, and that the proper course was to take the case before a civil Court. In a matter of so much interest, and involving a question of private rights, it is desirable that some definite decision should be arrived at, and we hope, therefore, that the case may be determined on its merits. Should the point raised in the interest of his client by Mr. Simms Reeve be sustained, it will have an important bearing in relation to those Norfolk Broads which are close to the angler, except by permission of the owner or lessee. Hickling, Hornsey, and Somerton Broads, as well as other Broads in the county, are, like Oulton, not only open to navigation, but subject to tidal influences, and if it is shown that this gives immunity to the angler, then there is an end to the exclusive privileges that have been hitherto claimed over these waters.—*Yarmouth Independent.*

WEN gels is very little it is their mether's enxiety ter keep metches out uv their wy, but wen they gits bigger the metherly enxiety is all th'ether wy.—*The Kaukneigh Awlminek.*

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

FISHING IN THE SOUTH OF IRELAND.

A RETROSPECTIVE glance at the past year's fishing suggests some consideration in reference to the future. It was a year fraught with remarkable events in Ireland—events that left their mark on angling interests. Tourists and visitors were prevented from touching many places of interest in the South, in consequence of internal disturbances, and the picturesque streams that pass through our south-western district were left to gurgle and flow on in their solitude, undisturbed by the angler. Near a city or a town there is always a sufficient supply of local fishermen to over-run the banks of the neighbouring brooks. The places to which I refer do not come within this category. In and around the districts of Glengariffe, Kenmare, and Killarney, are to be found well stocked streams for trout and salmon. and lakes filled with beautiful brown trout. Here, amid scenes of wild grandeur and exquisite beauty, the angler and tourist may ply his favourite sport unmolested and unrestricted. With returning peace and confidence in the country, a tour in this district during the next summer will well repay the visitor. Increased facilities in travelling afford better opportunities now for penetrating those remote but picturesque places than existed some few years ago. The weather so far has been very favourable for spawning. Since the close of the season we have had repeated floods, salmon and trout have been able to reach their spawning beds, and so far everything favours the prospect of good fishing next year. For some time past the anglers of Cork and the district have been desiring a change in the law, which they think will have an important effect in preserving angling interests of trout as well as of salmon.

I ventilated the subject some time ago in the columns of this paper, and I have been requested to draw attention to the matter again. The question of placing a licence upon trout rods has been discussed from time to time, and widely different views have been expressed as to the expediency of the step, and its ultimate advantages. By those who have a direct interest in maintaining the rights of trout-fishing, it is strongly urged that a licence, of say 2s. 6d., would have a most beneficial effect. It is pointed out that the licence would remove from the river a large number of country lads who poach and do great harm to the river, and that it would be the most effectual check upon the destruction of salmon fry. It has been a matter always of serious complaint that salmon fry are destroyed in myriads during the months of April and May. The fry, which have reached the size of a six-inch trout, are then on their way to the sea; and they take the fly or bait with extraordinary eagerness. Even grown persons have been found in the act of killing these little fish which are the source whence the salmon supply is derived. It would require a staff of fifty bailiffs to stop this annual "massacre of the infants."

My experience is that Boards of Conservators pay too little attention to this important point, and that between the destruction of fry in mill dams and by unscrupulous anglers, the means of affording a valuable stock of salmon is wantonly and unnecessarily swept away. Any step that would prevent this manifest injury would be hailed with pleasure by all fishermen. The latter, however, are not enamoured with the remedy proposed, though it would throw a large source of revenue into their very limited coffers. The inspectors, from whom the recommendation should properly come, before our Legislature would take action, are not in favour of it. But the question is, nevertheless, one which, we think, should be agitated and discussed. The opponents of the scheme see in it a dangerous incentive to poaching. People who now enjoy a harmless angle along the banks of some pleasant stream—country youth, who fish with rude equipment, consisting of an ash plant and a piece of whipcord—and others who could not afford to pay 2s. 6d., would, they say, be turned into a formidable army of poachers, who would avail themselves of every opportunity to destroy legitimate sport. Again, they contend that many who would have to pay for trout fishing would prefer to pay a little more and go in for "big game," and so largely multiply the ranks of salmon anglers.

I confess I do not see much force in the argument urged against the new movement; on the contrary, I think the nominal tariff proposed to be levied would not debar any ardent sportsman from enjoying his favourite pastime, while it would tend to increased preservation, an increased interest in angling, and would augment the funds available for the general protection of the salmon fisheries. Estimating the number of licences as likely to be taken in the Cork district at from 1000 to 1200, there would be a return of £150, which would provide more than a half-dozen bailiffs for three or four months, who could be distributed over rivers which for years have not been looked after, and where salmon fry are killed in a wholesale manner during the spawning season.

The importance of this subject is my excuse for dwelling so much upon it. Properly protected, the salmon fisheries of the south-west and west of Ireland would become an important source of wealth. We have had in Cork experience of the excellent results of a few years of preservation. The river Lee at one period was so worthless as a salmon river, that it was not considered worth while to preserve the fisheries along the banks. A rent of £5 a year would have secured a good stretch of water. The Anglers' Club was started, preservation was commenced in earnest, and in a few years after those efforts had borne fruit; rents went up from £5 to £30, and even to £60 and £100. The Government inspectors have always co-operated with the local boards in doing what was considered beneficial. But the question is a large and a public one, and Government should step in with legislation to give increased facilities for carrying out the machinery necessary for a more extended and thorough protection of the fisheries. The police have hitherto been pre-occupied with political duties. It is to be hoped the course of agitation has been run, and that they will have time to devote more attention in future to ordinary infringements of the law. Nothing frightens the poacher more than the police, and once the impression prevailed that the police were detailed for special work in connection with the salmon fisheries, it would be more effectual than the employment of a score of bailiffs in every ten miles of the river. Valuable protection would also be afforded to the harbour fisheries by a naval watch from the guardship. It was the practice, until lately, to place a gunboat at the disposal of the Fishery Conservators in the lower harbour. It is to be hoped the practice has not been permanently discontinued, but that the Government will, in those various ways pointed out, back up the efforts of the local authorities in a well-directed endeavour to improve and develop an important source of wealth, as well as of amusement.

—ANGLER.

THE INVERARY PROCLAMATION.

THE disciples of Izaak Walton, who find it a difficult task to discover an open water, will relish the proclamation given in the Dunoon book as having been made at the Market Cross of Inverary in the last century:—

Ta-hoy! Te t'ither ahoy! Ta-hoy
Three times!!! an' Ta-hoy—Whisht!!!

By command of his Majesty, King George,
an' her Grace te Duke o' Argyll.

If anybody is found fishing aboon te loch,
or below te loch, afore te loch, or hint te loch,
in te loch, or on te loch, aroun' te loch, or
about te loch.
She's to be persecutit wi' three persecutions;
First, she's to be brunt, syne she's to be
drownt, and then she's to be hangt—an'
if ever she comes back she's to be persecutit
Wi' a faur waur death.

God save the King an' her Grace
te Duke o' Argyll!

LARGE BASS IN THE DELAWARE.—Belvedere, N. J., Oct. 20.—On the 31st day of August, fishing at the foot of Foul Rift, on the Delaware River, I took with a small-jointed rod and line a black bass weighing six pounds eleven ounces; length, twenty-three inches; circumference, fifteen and a half inches; width, six and a half inches. The fish was out of water nine hours before being weighed. This is said to be the largest bass every taken with rod and line in the Delaware. Bass, I believe, weighing seven and seven and a quarter pounds have been taken in some of the ponds and lakes of this State, but not the Delaware. During the first week in August I took four bass, weighing seventeen pounds, from the same river. Bass fishing in the Delaware has not been good in this section, although some good strings have been made. The writer has taken about 160 since the 1st of July, many of them weighing from one pound to five and a half pounds.—I. H., *Forest and Stream.*

Important Offer to the Readers of THE FISHING GAZETTE.

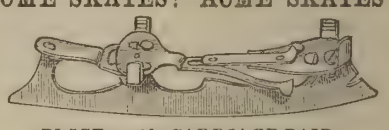
SKATES! SKATES!! SKATES!!!

AT PRICES TO SUIT ALL.

THE extreme mildness of last winter, and the consequent depression in the Skate trade, enabled us early in the spring of the present year to purchase for CASH a Manufacturer's stock, comprising 5000 pairs, at a price never before known in the English markets, and we now offer them to the readers of this journal at an unprecedentedly low price; and, in order to effect an immediate clearance of the entire stock, we have made special arrangements with Messrs Sutton and Co. to send all parcels CARRIAGE PAID. This, we feel sure, will meet with the cordial support of the thousands of readers of the FISHING GAZETTE who have hitherto favoured us with their patronage.

CONDITIONS OF SALE.—As soon as you receive the Skates, if not well satisfied with your bargain, write to us, and we will return you the money.

ACME SKATES! ACME SKATES!!

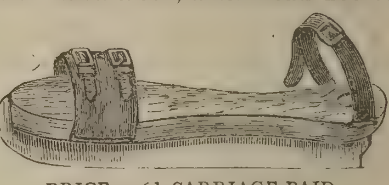


PRICE 5s. 6d., CARRIAGE PAID.
If stamps, 3d. extra.
Sizes—8½, 9, 9½, 10, 10½, 11, and 11½ inches.
All Sizes one Price.

The above pattern is too well known to require either description or comment. We need only say that they are of A1 quality, warranted steel blades, best finish and workmanship, and we guarantee them equal to any Skates usually retailed at half-a-guinea per pair.

Very superior quality ditto, beautifully nickel-plated, price 10s. 6d. per pair, carriage paid.

Hard Polished Wood, with Broad Toe Strap.



PRICE 3s. 6d. CARRIAGE PAID.
If Stamps, 3d. extra.
Sizes—8, 8½, 9, 9½, 10, 10½, 11, and 11½ inches.
All Sizes one Price.

This is our speciality in Wood Skates, and they are a marvel at the price. Each pair is polished all over, and fitted with two broad toe and heel straps, made of best leather and hand-sewn. The blades are well steeled, and in appearance and wear are unequalled by those costing treble the money.

This pattern can also be had in polished Walnut, with brass toe caps, and fitted with best leather straps. Price 5s. 6d., or 69 stamps, carriage paid.

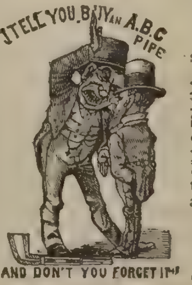
Hundreds of testimonials from all parts of England, Ireland, Scotland, and the Continent.

As a great rush of orders is expected, early application to ensure immediate delivery will be necessary. Orders will be executed in rotation, and when possible same day as received, and despatched per Sutton and Co., carriage paid. Size of Skates should be ascertained by measuring the full length of boot from toe to heel.

Send for a pair, and if you are not satisfied and amazed, have your money back

Our Illustrated List of Skates and other Specialities will be sent post free on application.

P.O.O.'s payable at the G.P.O., London, to **DRALLIM and OLIVER, 18, Ironmonger Lane, London, E.C., (and at Croydon).** Please mention this Paper.



I TELL YOU, BUY AN A.B.C PIPE
AND DON'T YOU FORGET IT!

EVERY MAN WHO SMOKES

should send 24 stamps for Sample Pipe.

No wet Tobacco to smoke through. No filthy oil to enter the mouth. Smoke always sweet and free, and can be instantly cleaned. The most perfect pipes invented since smoking began. 10,000 Testimonials. Illustrated prospectus free. With amber and case, 5s.

SATURDAY, NOVEMBER 25, 1882.

THE ACCLIMATISATION OF THE SALMONIDÆ AT THE ANTIPODES.*†

ON several occasions during the last two or three years we have given our readers accounts of the splendid trout fishing which is to be had in some of the New Zealand and Tasmanian rivers. With the aid of the valuable works referred to at the foot of this page, we shall now be able to give some historical notes relating to this most important subject, indicate the gentlemen to whom the honour of introducing the salmonidæ into those rivers is really due, and point out a few facts relating to the present condition and future prospects of these new fisheries. Considering the intimate commercial and social relations existing between the mother country and her Australasian colonies, and the great number of Englishmen, Scotchmen, and Irishmen who go to the Antipodes to visit or take up residence, it is a matter of no slight importance even to this country that our salmonidæ have become acclimatised there. The English race must have sport of some kind, and for our part nothing would lessen the regret of leaving the old country so much as the knowledge that first rate trout fishing was to be had in that to which we were going. Of the importance of this successful acclimatisation to the colonies themselves it would be difficult to speak too highly, though it is, perhaps, to the future that we must look for results assuming the proportion of national benefit. At present it is quite certain that the colonists do not support the movement heartily; indeed, as will be seen presently, they are so short-sighted as to hinder and obstruct, rather than foster it in many cases.

WHO INTRODUCED THE SALMONIDÆ?

The honour of having introduced trout, salmon-trout, and salmon into the Antipodes belongs unquestionably in the first place and chiefly to Mr. A. Youl, and secondly to Messrs. Francis Francis and Frank Buckland. This disputed question is entirely settled by the documentary evidence furnished by Mr. Arthur Nicols in his lucid and interesting "History" of the affair.

The first attempt to send ova was made by Mr. Boccius in 1852. He spent £300 in attempting to send a shipment of ova to Tasmania, bu owing to various causes he failed entirely—the credit of his enterprise, which undoubtedly aided the success of after attempts b showing the difficulties to be overcome, should not be forgotten.

MR. YOUL'S EXPERIMENTS.

The attempt of Mr. Boccius led Mr. Youl, in 1854, to study the whole subject of the artificial propagation of salmon, and the possibility of transporting their ova alive from one side of the globe to the other, and from north to south—that is to say, through the fierce heat of the tropics. As an instance of the difficulties Mr. Youl had set himself—a novice in pisciculture—to face may be mentioned the fact that the most eminent English and French pisciculturists of the day regarded the successful transportation of the ova to Australia as impossible. But Mr. Youl did not think so, and succeeded in obtaining the assistance of Mr. Edward Wilson, president of the Victorian Acclimatisation Society, and some other influential Colonists. A subscription of £600 was raised for the purpose of making a trial, which was to be conducted solely by Mr. Youl, and this was the beginning of a series of systematic efforts. In order to make himself thoroughly and practically acquainted with the subject, Mr. Youl visited the principal English and French fish-hatching establishments. It was the knowledge thus gained which eventually led to his success; although his first attempt was a failure, it indicated plainly that success was possible.

A shipment of 30,000 ova, obtained by Mr. Ramsbottom, was made in February, 1860, but owing to an insufficient supply of ice and insufficient protection against motion, the eggs were all killed on the passage.

So far private enterprise had furnished the funds; "but now the governments of Tasmania, Victoria, and Southland (N. Z.), convinced of the practicability of the undertaking, voted £3000, £500, and £200 respectively, and delegated the conduct of the work to Mr. Youl. Unfortunately, Mr. Youl's second attempt, made in March, 1862, when 80,000 salmon ova were despatched to Tasmania, met with no better success than the first; the ice gave out and the ova died in consequence. This second trial had cost £1410, and Mr. Youl had given his time and also £200 for perfecting details; its failure naturally caused great disappointment, and it was not without considerable difficulty that the Tasmanian government was induced to make another trial. This also was entrusted to Mr. Youl, and this gentleman, before consigning another lot of ova to Tasmania, carried out a series of experiments to test the vitality of salmon ova at a low temperature. He argued that if it was possible to keep the ova alive in a refrigerator at a low temperature for a certain length of time, viz., the time occupied in the voyage, it would be possible to send them alive to Tasmania. To prove this he decided to see how long he could keep eggs alive in England. His experiments are so interesting and valuable that we quote Mr. Nicols' account of them *in extenso*. He says:—

"It is important to give the details of this, because it elicited three heretofore unknown facts—first, that a continuous and full stream of water is not essential to the preservation of vitality; second, that partial deprivation of air is not fatal; third, that light is not necessary. On the 17th of January, 1863, 5000 salmon ova were obtained from a female and fertilised by the milt of one male. From 200 to 600 ova were placed in each of eleven wooden boxes, filled with moss taken from one locality, and distributed carefully among it. Seven of these were covered with blocks of ice some 2 feet thick, and the whole buried under 2 feet of sawdust in one of the vaults of the Wenham Lake Ice Company. Few believed that a single ovum would be found alive at the end of sixty-seven days, but when some of the boxes were opened in the presence of a number of practical and scientific men, the microscope showed the great majority of the ova to be alive and healthy, though there was neither air, light, nor a continuous supply of water. Some boxes were allowed to remain for one hundred and twenty days, and still the ova were healthy and the moss growing. The temperature had been about 32° the whole time. From both sets a fair proportion were afterwards hatched out. Still more remarkable than this was the case of one box placed in the dry compartment of a patent refrigerator, surrounded by ice, and proved to be air-tight by inclosing in it a lighted candle, which went out soon after the lid was shut. On the ninetieth day this box was opened, the moss was damp though the outside was dry, and no less than seventy per cent. of these ova were hatched. But by far the best results were obtained from a box in the ice compartment of the refrigerator, with blocks of ice (renewed as they melted) piled upon it, the water being allowed to percolate through it. Of these ova the extraordinary number of ninety-nine per cent. produced healthy fish, after they had been under this treatment ninety days!"

---

* "The Acclimatisation of the Salmonidæ at the Antipodes: Its History and Results." By Arthur Nicols, F.G.S., F.R.G.S. London: Sampson Low, Marston, Searle, and Rivington. 1882.

† "The Report of the Otago Acclimatisation Society for the Year ending December 31, 1881." Dunedin: Wise, Caffin, and Co., Princes Street. 1882.

Mr. Youl's patient researches were thus crowned with complete success, and in the words of the Tasmanian Commissioners, "The result of these experiments constitute one of the most valuable discoveries yet made in the art of pisciculture, and must ever indicate an important era in its history."

(*To be continued.*)

NOTICES OF BOOKS, &c.

"FLOAT FISHING AND SPINNING IN THE NOTTINGHAM STYLE." Being a treatise on the so-called Coarse Fishes, with instructions for their capture, including a chapter on Pike Fishing. By J. W. Martin (the "Trent Otter"). With illustrations, crown 8vo, 150 pages; price 2s. Sent post free on receipt of stamps by the publishers, Sampson Low, Marston & Co., Crown Buildings, 188, Fleet Street, London.

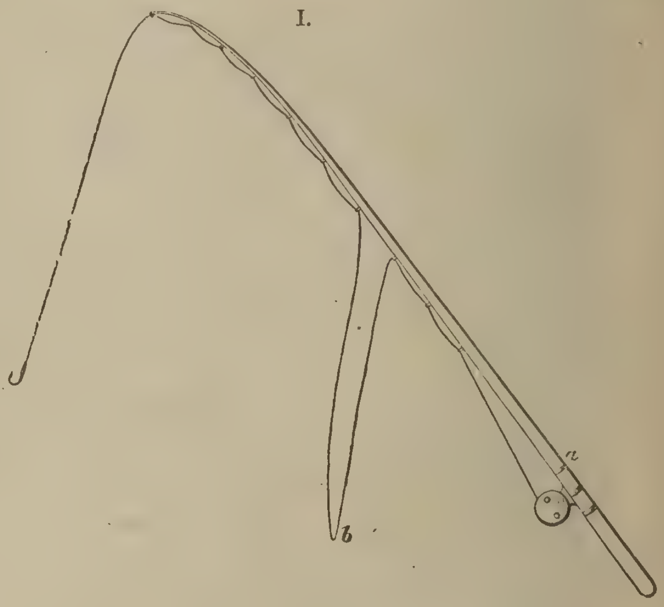
> "Ye who stand behind the counter,
> Or grow pallid at the loom,
> Leave the measure and the shuttle,
> To the rippling stream come, come."
> —"The Invitation."

In his preface to this very capital book on bottom fishing in the Nottingham style, Mr. Martin says:—"There is a vast army of bottom fishers in the kingdom, and the great majority of them are working men who can only get a day's fishing occasionally; it is to these working-men anglers I am more particularly addressing the remarks contained in this little volume. I myself am a working man, but I have had very considerable experience in Trent angling when I could spare the time from my work. . . . The extent of the pocket of the working-man angler has been constantly before me when describing his outfit, and there is nothing mentioned that cannot be bought or made cheaply. Perhaps, also, the better class anglers may derive some instruction from this little book The plainest possible language has been used, so that the veriest novice can understand what I mean, and I have been very particular in my description of the tackle, baits, &c. In Chapter II. will be found a full description of the outfit of a Nottingham angler; how to make his tackle, and how to use it, and some recipes that are very valuable to the fisherman."

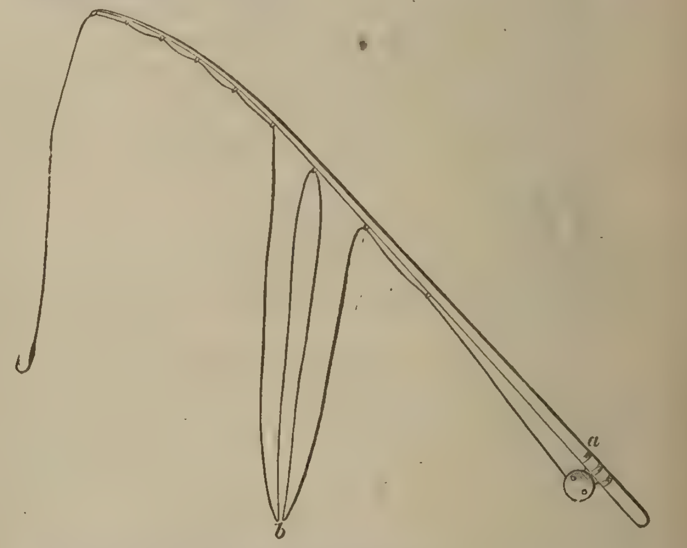
Although, as the author says, his book is mainly intended for working-men anglers, we are sure it will be found quite as valuable by the richer brethren of the rod, for the Nottingham style of fishing is rapidly becoming general—thanks in a great measure to the writings of Mr William Bailey, of Nottingham, and especially to his "Angler's Instructor," which we spoke so highly of a year or two back.

The merit of Mr. Martin's book is owing to the fact that while he covers the whole field of bottom fishing in the scientific Trent style, he goes into all the details thoroughly; he writes for those who wish to learn, and not for those who know, though we venture to think even the most knowing "old hand" will get many useful hints from Mr. Martin. The woodcuts of tackles and the various ways of holding the rod have been made from his sketches, and, as far as we know, have never before been illustrated. We give specimens of one or two. The following extract describes the illustrations, and also will give our readers a very good idea of Mr. Martin's style, and some very useful information as well.

"Having now given the outfit of a Nottingham bottom-fisher, it will be as well to give some idea as to the method of using it. Now, the tyro must bear in mind that the motto of a Nottingham angler is 'fine and far off,' the chief object being not to let the fish see or hear him if he can help it. If he has not already selected a swim, he walks along the bank until he sees a spot that looks likely to yield sport, where the stream is steady and not too strong, and which looks about the right depth. The first thing he does is to ascertain how deep it really is. Now, a London angler would drop in a lump of lead, and work it up and down all over the swim, and scare the fish to begin with. A Nottingham fisherman, however, adjusts his float at what he thinks to be about the right depth, and casts his tackle out to the exact distance from the bank at which he intends to fish, and allows his float to travel down the stream. If it floats in an upright position without either dragging or bobbing, he is not deep enough, and so he loosens the cap on the float and increases the length below it. If now the float bobs under, the shots are on the ground, and the line must be shortened under the float. After he has had a swim or two, he can by this means hit the proper distance between hook and float, which allows the bait to trip along the bottom without any of the shots coming in contact with it. Should the bait during its passage down the swim at any time hang, the raising of the rod point will loosen it.



a. Angler's right hand holding rod just above the reel.
b. Angler's left hand pulling down line in order to make a cast with light tackle in Nottingham style. Page 34.



a. Angler's right hand holding rod just above the reel.
b. Left hand pulling down two lengths of line in order to make extra long cast. Page 34.

Illustrations from Martin's Float-Fishing and Spinning in the Nottingham style.

"Now, having found the exact depth and had a swim or two down the entire length he intends to fish (for a Nottingham angler's swim is very often twenty or twenty-five yards in length), our fisherman throws in his ground bait so that it is distributed over the swim. Considerable judgment is required for this, according to the strength or set of the stream, for it is necessary to fish over your ground bait, and you must calculate carefully whereabouts your ground bait is likely to fall. If it is thrown up the stream too high it will ground too soon, or if too low, it grounds out of your reach below the swim. There is a good deal in this, and many a bad day's sport has been ascribed to any other cause than the right one in consequence of a miscalculation on this important point. We will now suppose the swim the angler has selected is from twenty to thirty feet from the bank, and he is fishing with very light tackle, too light to be cast from the reel (for the reel would not revolve sufficiently for casting with such a light weight), and that he cannot coil it on the grass at his feet, nor allow any to hang loose from the reel; the fine line he is using would twist and tangle up. He cannot reach the swim with the rod, and what line there is is hanging from the point. What is to be done? A Nottingham angler holds the rod in his right hand, and with his left takes hold of the line as high up the rod between the rings as he can reach, and draws down as much line as he requires. He then has some four or five yards of line in his left hand, and with what is hanging from the point of the rod, he can then throw the distance he requires, which he does by bringing the rod away from the river at about an angle of 45 deg. He then sends the point of the rod smartly over the river, at the same time letting go the line he held in his left hand; the line will now go fair and neatly to its destination without tangle or catch. Some Nottingham anglers, when they want to cast extra long distances, draw down two lengths of line from the rod, the rings, of course, parting them, and throw in the same way as before. By these means, after a little practice, one can throw to nearly any distance he likes.

"Now that the float is cast to its destination, the angler changes his rod to his left hand, and with the finger and thumb of his right he takes hold of the line close to the reel, and pays it off gently and continuously, so that it shall run freely through the rings and never check the swim of the float. By this means the line between the float and the rod point is tight (but not too much so, or the float would lay nearly flat on the water), and enables him to strike the very moment he perceives a bite. Failing in getting a bite, he allows the float to travel down stream until he has completely covered the space where he supposes the ground bait to be, when he winds up the line and repeats the cast. Sometimes the hole to be fished is from twelve to twenty, or even more, feet in depth; and when this is the case, it is difficult to fish it with the ordinary floats, and for this purpose a float, called a 'traveller,' 'slider,' or 'running float,' is used. As may be supposed from its name, this float slides or runs up and down the line, and can be easily made from one of the ordinary swan quill or cork floats. A small upright rod ring is whipped about half an inch or so from the top, and a very small ring about an inch from the bottom. This ring can be made out of a piece of very thin copper or brass wire, as follows:—Wind the wire two or three times round a small knitting or stocking-needle, and then draw it off; cut off each end to within three-eighths of an inch, which must be left for the purpose of whipping it to the quill; this small ring will just allow for the passage of the line. Thread the line through the rings on the float, and when you have got the exact depth, knot a little bit of line or wood or straw in the line above the float. When the float is out of the water it drops down to the loop of the tackle, and when it is thrown in the water, the shots or sinkers carry the line through the float rings until it is stopped by the little bit of wood, &c., mentioned above. If the Nottingham bottom-fisher uses a cork float and a heavier tackle, he mostly throws his bait from the reel—that is, in a manner somewhat similar to that of jack spinning. He winds up the line until the float nearly touches the top ring of his rod, and then gives it the desired swing over the river. I have seen baits cast by this means thirty, or even more, yards. This plan is chiefly used in barbel fishing, and the swim is a good distance from the bank, and I shall touch upon it, as well as on ledgering and plumbing, in the chapter on barbel. I ought to just mention that when the slider float is used, the little piece of line that is knotted in the line should be so contrived that it will run with freedom through the rings of the rod, so that when winding up or playing a fish it does not catch. The different baits used in bottom fishing, when and how to use them, will be fully explained in the chapters on the different fish.

"I have now, I believe, described the outfit and the general *modus operandi* of the Nottingham bottom-fisher. He is not beholden to punts and puntsmen for his sport; he can wander along the banks, select his swims, and fish them in the deadly and scientific style I have been attempting to pourtray. He pursues his avocation amid scenes of natural beauty; he follows the windings of the river, and becomes acquainted with its course. He knows the solitude of its silent depths and the brilliancy of its shallows; he is confined to no seasons; he salutes Nature with the budding spring, the rustling leaves make music in his ear before the mist has rolled from the water, or the dew been kissed from the grass by the rays of the sun. He throws his line when ruddy autumn, with its wealth of fruit, hangs heavy on the bough, or the cornfields wave in golden abundance on the slopes of the uplands, the storm and the tempest scarcely check him, and he can pursue his sport when winter's winds blow cold over the meadows, and the trees glitter like diamonds with a wealth of hoar frost. If he is an ardent sportsman, he cares not for the rude blasts of winter, for now is the time for pike and chub; he can tramp over the snow to his sport with as much zest as though the meadows were clad in the gayest garb, and when the big pike seizes the glittering spinning bait, and when the thin, tapering wand is bending double from his powerful rushes, the angler forgets that the day is cold, and that there is snow under his feet. Let none say this sport is ignoble. 'Ignoble,' indeed. Let him answer who has felt the powerful rush of a 10 lb. barbel on the fine tackle of a Nottingham bottom-fisher. What hopes and fears he has had,—what a time of pleasurable enjoyment until, wearied out, the grand fish lies in the landing-net. Such, then, is the tackle and sport of a Nottingham bottom-fisher. I wish to initiate the tyro into this beautiful art; and although it is impossible to teach it thoroughly in a book, yet much may be learned this way; and as I am more particularly writing to working-men anglers, I have used the plainest possible language, so that the veriest tyro shall have no difficulty in understanding what I say."

We can most confidently recommend Mr. Martin's book to our readers, for his instructions are sound and practical, and based on personal experience. A good index, which the author has added, makes reference easy to his descriptions of fish, rods, lines, reels, hooks, baits, ground baits, &c., and the various methods of fishing in the "Nottingham style."

CLUB AND OTHER JOTTINGS.

By L. B.

THE usual monthly meeting of the West Central Association of London and Provincial Angling Societies was held at the Portman Arms, Great Quebec Street, Baker Street, on Friday evening, November 17th, Mr. Beckett occupying the chair, Mr. R. Murphy facing him in the vice, Mr. L. Bonvoisin officiating as secretary in the absence of Mr. T. Hoole, confined to his bed by a severe attack of rheumatism.

After the reading and passing of the minutes of the previous meeting, Mr. Bates proposed, and Mr. Buttery seconded, that a reward of one guinea be given to P. C. 26, Frederick Tunsell (Oxford City Police) for a conviction recently obtained against a poacher in that neighbourhood, which was unanimously carried. After some remarks from Messrs. Bates, Harrison, Boalch, Copeland, Murphy, Buttery, and others, Mr. Bates proposed, and Mr. Field seconded, that the balance-sheet be passed.

Anent the International Fisheries Exhibition and the London angling clubs, a long and interesting discussion took place on this important subject. Mr. T. R. Sachs was prevented by illness from attending, but his colleague, Mr. Thomas Crumplen, made some plain practical remarks on the above subject, which were listened to with the greatest attention.

Pressure of business, &c., having compelled Mr. Beckett to relinquish the office of representation from this association at the meetings of United London Anglers' Central Committee, Mr. Crumplen proposed, and Mr. Bates seconded, Mr. Copeland to fill the vacancy, which was unanimously carried, a hearty vote of thanks being passed to Mr. Beckett for his past valuable services.

The following correspondence was then read by the secretary *pro tem.* It seems to me of such public importance that I have asked our Editor to allow me the necessary space for its insertion *in extenso.*

West Central Association of London and Provincial
Angling Societies, November 6, 1882.

DEAR MR. BUTLER,—In the absence of Mr. T. Hoole, on sick-leave, I am directed by the Committee of the West Central Association of London and Provincial Angling Societies to forward you, in your official capacity as secretary of the Reading District Thames Angling Preservation Society, the enclosed copy of a letter received from one of our members. I need scarcely remind you how important to us is the maintenance of the undoubted public right to use the Thames towing-paths, quite 90 per cent. of our thousands of members being exclusively "humble bank fishermen." And as this arrogant claim has been set up in the district under your association's immediate care, we thought it right in the first instance to call your attention to it.

The next general meeting of the association takes place on Friday evening, November 17, and if you can possibly manage it we should like to have your reply in time to submit it to the representatives of the various societies on that evening.

I remain, dear Mr. Butler,
Yours very truly,
LEO BONVOISIN, sec. *pro tem.*

To Arthur Butler, Esq, Hon. Sec. Reading and District
Thames Angling Preservation Society.

[Inclosure above referred to.]

October 17, 1882.

MR. BONVOISIN—

DEAR SIR,—May I trespass on your valuable time to give me some information on the following:—

On Sunday last, accompanied by my old fishing friends, Messrs. Stead and Billings, I went to Tilehurst, the station that you gentlemen of the Angling Association have so kindly got us London anglers concessions to. We had not been fishing long before we were ordered off the tow-path by a gentleman, who said the tow-path was his private property; and, moreover, that unless we did not leave off fishing he would fetch such of his servants as would quickly remove us. Of course we immediately left off, not wishing to bring discredit on the association to which we belong.

I must tell you, Sir, for the edification of my brother anglers, that this owner or property, whose name, he told us, is Major Storer, states that the banks for miles are his property, and that he intends to stop all fishing from the same, and will order off or prosecute all such as may persist in doing so.

My reason for troubling you is that many anglers may go and do as my friends and self did, and be put to the trouble and expense of being summonsed—or, if report in the neighbourhood speaks true, may stand a chance of losing their tackle, the same being taken from them by the "Major." Hoping I am not troubling you too much,—

I remain, yours very respectfully,
ED. SMITH.

Leo Bonvoisin, Esq.

Reading and District Angling Association, Great
Western Hotel, Reading, November 13, 1882.

DEAR MR. BONVOISIN,—Thanks for your favour and inclosure of the 6th inst. I brought them before a meeting of our committee on Saturday last, and am instructed to inform you that the members of this association have always found Major Storer, of Purley Park, a very courteous gentleman. We understand that he entertains a very strong objection to Sunday fishing.

I am also asked to point out to you that if Major Storer did order anglers off his portion of the towing-path he simply exercises an undoubted legal right.

We were very sorry to hear of Mr. Hoole's illness, and trust he has quite recovered by now.

Very faithfully yours,
ARTHUR BUTLER, hon. sec.

Leo Bonvoisin, Esq.

After the reading of the above correspondence, a proposition was made by Mr. Field, seconded by Mr. Starr, that this matter be referred to the Thames Rights Defence Association, which was unanimously carried. Upon the roll being called, it was found twenty-nine societies were represented, while Mr. Ghurney was present on behalf of the United London Anglers' Central Committee. A hearty vote of thanks to the chair and vice-chair and secretary (*pro tem.*) brought the meeting to a close.

READINGS IN ANGLING SOCIETIES.—A series of readings among half a dozen angling societies in the north-west district have been arranged, and will shortly be inaugurated. Among those who have volunteered to read papers are Messrs. Geen, Hill, Bonvoisin, and Torr.

[We are delighted to see that the practice of having "Readings" is gradually gaining ground amongst the London clubs.—ED.]

CLUB REPORTS.

AMICABLE BROTHERS ANGLING SOCIETY.

On Sunday, November 19th, the show of fish was contributed principally by Mr. F. Arnold, roach, 8 lb. 12 oz., and one jack, caught with paste, 1 lb. 1 oz. The result of the pegged-down match at Cheshunt was nil. Those who have been in the pegged-down contests the last three weeks can go where they please for the six prizes. Mr. Metcalf was re-elected as trustee and delegate for the U. L. A.; Mr. Farebrother re-elected as delegate for the W. C. A. The annual supper will take place on Monday, December 11th, in the club room. The general meeting adjourned to Wednesday, November 29th, when all interested in the alteration of rules are requested to attend.—T. WORLEDGE.

ANCHOR AND HOPE ANGLING SOCIETY.

Sunday, the 19th inst., several of our members were out; the following weighing in:—Messrs. J. Bowling, A. Glass, T. Bowling, and C. Daniels, all roach. A peg-down match will take place on Sunday, December 3, at Ordnance Factory, for four valuable prizes.—D. DAVIS, sec.

ANGLERS' BENEVOLENT SOCIETY.

Since my last report, I beg to acknowledge with thanks the receipt of 8s. from the donation box of the Great Northern Brothers' Angling Society.—R. GHURNEY, sec.

Nov. 23.

BRISTOL GOLDEN CARP ANGLING ASSOCIATION.

An angling contest by the members of the above association took place in the canal at Bathampton this day. Forty-two members competed for £5. in prizes given from the funds of the association, with a large number of other valuable prizes given by tradesmen and others having a high regard as to the welfare of the association. The contest took place in very boisterous weather; and the catches were not so large as may be expected, there being many old and experienced anglers as well as expert and good gentlemen anglers contesting. Under the management of the president, Mr. J. W. Hadden; vice-president, Mr. H. Inch; and the judge and weigher, Mr. John Inch and assistant, the day's proceedings were a success, the members thoroughly enjoying themselves. I may state that the funds have allowed us to use £20 this year, to be given in prizes, and we have the strong support of a great many tradesmen and friends. As the association is a highly flourishing one, they have many applications as to membership, but are particular as to whom they accept. The whole of the prizes contested for not being won, we intend to hold other contests before the end of the season. I may state we have a good balance in hand at our bankers.—J. W. HADDEN, President.

BRUNSWICK PISCATORIAL SOCIETY.

At a meeting of this society held last evening the secretary informed the members that he had not received from Mr. Copeland, the late secretary, the books and property belonging to this society, or a reply to his application for their return. It was unanimously voted that proceedings be taken for their recovery. I am pleased to inform you several gentlemen have been enrolled within a fortnight as members. After the business over, a very enjoyable evening; music and song; pianist, Mr. W. Allsop.—MILES DOUGHTY, secretary.

Nov. 23.

CAVENDISH ANGLING SOCIETY.

The above society has removed from the British Lion, Cavendish Street, to the commodious club room at the Duke of York, Wenlock Street, Shepherdess Walk. The shows of fish on Sunday last were below the average with one exception. Mr. Soillieux had a pretty show of roach about ¾ lb. each. Members are reminded of the competition on Sunday next.—E. CHAMBERS.

CITY OF LONDON ANGLING SOCIETY.

Our shows of fish have been very small of late, but we have not yet had a blank this season. On the 12th, Mr. Castell weighed in roach, from the Stort; on the 19th, Messrs. J. Chambers and Castell weighed-in—the former, bream, from Amberley; the latter, roach, from Rickmansworth. Our general return visit of the United London Anglers will take place on Tuesday, November 28, at our club house, Cogers' Hall, Bride Lane, Fleet Street, which can be easily reached, by 'bus, rail, or tram, from all parts of London.

DUKE OF CORNWALL ANGLING CLUB.

The fifth half-yearly supper and distribution of prizes of the Duke of Cornwall Angling Club, will be held at the Duke of Cornwall, Lismore Circus, Haverstock Hill, on Monday, December 4. Chairman, Mr. J. Heckford; vice-chairman, Mr. England.—J. HECKFORD, sec.

HAMMERSMITH UNITED ANGLING SOCIETY.

On the 15th, Messrs. Hobden and Geen, fishing at Handborough, had mixed bags of roach, dace, perch, and chub; and on Thursday, Mr. Geen took a small jack; Mr. Mansell had a jack of 8 lb. 15 oz. on Friday; and on Sunday, Messrs. Lewis and Reynolds had dace and roach, from the tidal waters.—ARGUS.

HIGHBURY ANGLING SOCIETY.

On the 19th inst., the Highbury Anglers had a very nice display of jack, roach, and dace, contributed as follows:—Mr. Anthony, 3 lb. 11½ oz. and Mr. Samuel Stowell, 3 lb. 9½ oz. of roach and dace, from the Lea; and Mr. Higley, some fine jack, from Basingstoke. Several other members were out, and added to the trays.—JAS. EDWD. WHEATLEY, sec.

LEEDS ROCKINGHAM ANGLING SOCIETY.

The fourth annual dinner of this society was held on the evening of Thursday, the 16th inst., at the Rockingham Arms, when nearly fifty members and friends sat down. The president, Mr. E. F. Atkinson, occupied the chair, and the secretary, Mr. G. W. Hellewell, the vice-chair. Messrs. Thompson and Johnson, the president and secretary of the York Angling Association, attended as a deputation, and several other gentlemen from whom the society has the right of fishing were present as guests. Mr. Superintendent Stansfeld, of the West Riding Constabulary, to whom the society owes much for his assistance in suppressing illegal practices in different waters, was also among the guests The president, in reply to the toast of the evening, "Success and Prosperity to the Leeds Rockingham Angling Society," said that he could not help feeling a great amount of pardonable pride when he considered the small beginning o the society four years ago, and how by the exertions of an energetic executive it numerical and financial position, placed it in the foremost rank of such societies as are formed not only for catching fish, but for the propagation and preservation of the species. He also urged every member to strictly obey all laws piscatorial, and prosecute in every infringement of the same, and thus induce the county gentlemen to extend the assistance already conceded in many intances and also earn for themselves a reputation as a society second to none in the kingdom. Mr. Thompson, of York, replied to the toast of "the Visitors and Kindred Societies," and during the course of a long and interesting speech urged the necessity of a conference of various societies, in order that the "Fisheries Acts" might be considered, and various alterations and additions made. Mr. Johnson also responded, and Mr. Hutchinson, of Roall House, on behalf of the visitors. Amongst the other toasts were "The Keepers and Police," suitably acknowledged by Messrs. Stansfeld, Hodgson, Thompson, &c. The dining-room was profusely decorated with flowers and plants, in addition to the preserved specimens of fish, and birds, and pictures belonging to the society, and the members may fairly congratulate themselves on the most successful and brilliant gathering they have yet experienced.—E. F. ATKINSON, president.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

A special meeting of the above society will take place at the White Hart, Aylesbury Street, Clerkenwell, on Monday, November 27, to arrange the date for the half-yearly supper, when other important business will be laid before the members.—J. OBBARD, sec.

Nov. 21.

PECKHAM BROTHERS ANGLING SOCIETY.

THE dinner which took place in connection with this society on the 7th was a grand success, 29 gentlemen partaking of the good things provided, and one member was heard to declare that Mrs. Reed was as successful in her cooking as Sir Garnet is in warfare. After we had satisfied the inner man, "Oh, that the fish would feed as well," the chairman, A. Brodie, Esq., proposed the "Queen and Royal Family," followed by "Success to the P. B. A. S." which was received with cheers by the company, who now numbered about 80. The hon. sec., in response, spoke of the general affairs of the club, and expressed a hope that the limit number might be reached before the close of the season. The following gentlemen sang during the evening: Messrs. Brodie, Matthews, Blank, who sang "Robin Adair" in German, Mr. Bignall, whose "On Guard" met with a wish for an encore, in response to which he sang the "Flipperty Flop Young Man," Messrs. Parkins (City of London Angling Society), Haines (Anglers' Pride), Davis (Anchor and Hope), and Stidolph, Minard, Duke and others, until the clock showed we had time to drink the chairman's health, and then "God Save the Queen" brought to a close the most successful meeting of the above society.

W. H. PAGE, Hon. Sec.

PORTSMOUTH WALTONIAN ANGLING SOCIETY.

On Thursday, the 16th inst., the president (Mr. Leon Emanuel) read the instructory paper for the opening of the winter session. The subject was "The Habits and Capture of the Dace." The subject was fairly handled, and a vote of thanks was accorded at the finish. During the evening two beautifully illuminated certificates were presented, for the heaviest catch of fresh and salt water fish during the past season. The winners were Mr. F. Mortimer (fresh water), Mr. Redward (salt water). Mr. Ritchie was successful on the same day of landing a fine jack weighing over four pounds, caught in the Rother. This is the first that has been shown in the club this season. Others, we hope, will follow.—DAGGERWOOD.

RODNEY PISCATORIALS.

Our worthy host and Mr. Hockley had a few days' sport last week, but the weather became so rough that (it was even more than stones could stand, for they either got blown or washed away) they had to return contented with a few jack and about 30 lb. of roach, some of which turned the scale at 1 lb. 12 oz. On the 22nd a warm discussion took place on the laws of fresh and salt-water fishes, and why the latter should be allowed to be taken and considered in their prime when in a condition in which the former are not allowed to be taken, and at times when allowed to be taken are in such condition that salt water fish in the same condition are not reckoned worth the while of catching. The question was well handled by Mr. G. Hockley, who got so warm, and his hearers so interested in the discussion, that it was not until it was reported that the tail of the comet was in sight that we adjourned the discussion to another time, and retired to our respective abodes. A gentleman, well known in this neighbourhood, has offered £12 for a 3 lb. roach in good condition; anyone catching one of that weight and forwarding it to Mr. G. H, the Swan, Old Kent Road, will stand a good chance of handling that £12. Discussion for Sunday night, "The Voracity of Pike.—PIXIE.

ROYAL GEORGE ANGLING SOCIETY.

Mr. Chart turned up on Sunday with a nice little lot of roach and dace, weighing 5 lb., and Mr. Guynan followed suit with a similar show 2 or 3 oz. behind. On Tuesday Mr. Bernhardt took a few dace and a barbel. We shall be busy next Sunday, as we have arranged to test our respective merits in the tidal waters. The collection of preserved fish has received an addition in the form of a handsome case containing three roach beautifully set up by Mr. Cooper. The fish were taken by Messrs. Chart and Holden last June at Amberley, and weighed 5½ lb.—C. W. W. BERNHARDT, hon. sec.

SOUTH LONDON ANGLING SOCIETY.

I beg to inform you that the officers of No. 3 district have appointed Thursday, Nov. 30, for the rotation visit to the above society, Mr. Bonvoisin in the chair. The committee and members will therefore be glad to be favoured with the company of as many members of your society as can make it convenient to attend. Also on Sunday next, Nov. 26, we fish a pegged-down match against the Walworth Waltonians at Sawbridgeworth for a supper to be given by the losers.—G. H. FIELD.

THE FITZROY ANGLING CLUB.

A new society has been formed at Mr. F. Kemp's, The Crown, Cleveland Street, Fitzroy Square, and at the preliminary meeting there were fifteen members enrolled; Mr. Hyde being appointed chairman, pro. tem.; Mr. Hawesby, secretary pro tem. Many anglers attended at this meeting, and they have every prospect of success. They will be called the "Fitzroy Angling Club," and will be enrolled in the W.C.A.L.A. Their next meeting will be Tuesday, November 28th, when they will be pleased to see any angling friends who are willing to give their advice on the formation of rules.—J. W. AMIES.

THE LITTLE INDEPENDENT ANGLING SOCIETY.

Our members were out last Sunday, and our trays were very well filled, the members having some fine shows of fish. Mr. H. Moore had another very fine jack, also Mr. Raine had a fine jack and roach. Mr. Hurwood had a fine show of roach, perch, and rud; Mr. Petrie, roach and dace; Mr. Keene, jack; Mr. Humphreys, roach; Mr. Scott, roach and dace.—W. H. EVANS, secretary.

THE PISCATORIAL SOCIETY.

The annual pike competition for fish taken out of public waters, and not limited to the Thames, took place on Monday last. Those members who visited the public waters of the Avon met with more or less success, and together placed on the table of the club-room at Ashley's Hotel on Monday evening a handsome show of fish. The first prize, of four guineas, was awarded to Mr. G. Robinson, with six pike, weighing 44 lb. 12 oz., the largest, 11 lb. 2 oz. The second prize, of two guineas, was secured by Mr. Thomas Huggett, with seven fish, weighing 29 lb. 2 oz. Mr. Walker weighed in a handsome pike of 15 lb. 4 oz., in splendid condition, which has been sent for preservation. Had there been a special prize for the heaviest fish, as in the other competitions, it would have been deservedly given to Mr. Walker. It was arranged on this day to fish for the second prize of the Shentonian competition of pike from the Thames, which was not won when that competition took place. This prize was won on Monday last, by Mr. E. Foreman, with two pike from Clieveden, weighing 11 lb. 12 oz, the largest 8 lb. In addition to the above fish Mr. G. Robinson weighed in one tench, 4 lb. 13 oz. from the Avon. Mr. F. C. Hatfield, one pike, 4 lb. 9 oz., from Hendon; Mr. Wheatstone, one pike, of 3 lb. 13 oz., from Hendon, and Mr. Andrew, one roach, of 1 lb. 4 oz., from the Thames. Mr. M. H. Blamey presented to the museum of the Society a magnificent specimen of a carp, taken by himself. It weighed 13 lb. 4 oz, and the fish is now in the hands of Mr. John Cooper for preservation. The chub competition, which is the fixture for Monday, the 4th of December, promises to be a great success, provided the water is in suitable condition, as a large number of members have already expressed their intention of competing for this favourite contest. The meeting on Monday evening last was attended by about forty members presided over by Mr. James Pattisson, who was heartily presented with a vote of thanks for the very able manner in which he had discharged his duties.—B.

THE WATFORD PISCATORS' CONCERTS.

The members of the above society held a smoking concert in their club room on Monday, November 6th, 1882. The chair was taken by Mr. F. Horn, ably faced by Mr. H. Bigwood. Although the evening turned out wet, there was a large attendance. The chairman made a capital opening speech, in which he said that the concert was the first of a series which would take place on the first Monday in each month. He thanked the members for the great interest they had shown in the society during its existence, and he felt sure, had it not been for their mustering in such strong numbers at the meetings, that the society would have never arrived at such a perfect state in so short a time. He felt great pleasure in being able to open the concert with the first song, which he did in fine style with "Why Rouse the British Lion?" Mr. Bigwood much amused the company with a comic, entitled "Guy Fawkes." Some capital songs were sung by Messrs. Lucas, James, Haywood, Williams, Griffiths, Spicer, and Vincent. Mr. Williams played a pianoforte solo in his usual brilliant manner, and Messrs. Haywood and Spicer, the Watford Nightingales, both received a double encore. Mr. Lovejoy proposed a vote of thanks to Mr. Williams for the able manner in which he had accompanied the singer, which was seconded by Mr. Beach and carried unanimously. Mr. Vincent proposed a vote of thanks to Mr. Horn for the able manner in which he had filled the chair, which was also seconded and carried, and, with "Auld Lang Syne," thus ended the first of the many pleasant musical evenings that the Piscators hope to enjoy.—BANJO.

UNITED LONDON ANGLERS.

Secretaries of societies enrolled on the Central Committee will oblige by adding to the new list the following club, to be placed on the visiting list:—The Buckland Angling Society, the Middlesex Arms, Clerkenwell Green; secretary, Mr. L. V. Dileau; meeting nights, Wednesday and Sunday.—R. GHURNEY, sec.

Nov. 23.

WALWORTH WALTONIANS.

A number of the members of the above society are to meet a number of the members of the South London on the 26th, at Sawbridgeworth, to contest as to who shall pay for a supper for the whole party. Members of this society are requested on this occasion not to bait "the fender swim," but muster in as large a body as they can "down by the old mill stream" for the honour of the society. The next competition will take place on Sunday, December 10, for the following prizes:—First, box of best cigars, given by Mr. Taylor; second, 1 lb. of tobacco, 1 gross of vesuvians, and a pouch, also given by Mr. Taylor. —PIXIE.

SILVER TROUT ANGLING CLUB.

THIS society was in existence when comparatively few angling clubs were established in London, and has always been conspicuous in the encouragement of true sport and upholding the principles of fair and honest angling. Since its location in its present quarters, at the Star and Garter Hotel, in St. Martin's Lane, Charing Cross, where Mr. F. C. Hatfield is the popular piscatorial proprietor, it has given birth to new institutions, which have become developed and grown into gigantic proportions, and the members have occasion to feel proud that in their club room such associations as the West Central and the Central have been nursed and got to maturity. In all these matters Mr. F. C. Hatfield has occupied a most prominent position, and secured the respect of all classes of anglers. It has been usual on the occasion of the dinners of the Silver Trout Angling Club, to hold them in the club room, where Mr. Hatfield catered for those present with magnificent hospitality, never failing of late years to place on the table, amongst other luxuries, a magnificent salmon, served up under his personal carving and superintendence. The society for some time has been anxious to put Mr. F. C. Hatfield in the position of chairman, and this year, finding it more convenient, on his suggestion, to hold the dinner somewhere else, it was finally determined to have it in St. James's Hall, inasmuch as the Holborn Restaurant had no room at liberty, and Mr. Hatfield consented to become chairman. The half-yearly dinner was therefore held on the evening of Wednesday last, Mr. F. C. Hatfield ably discharging the duties of the chair, and Mr. Hawkins that of the vice-chair. There were present Mr. J. T. Carrington (Westminster Aquarium), Mr. W. H. Brougham (T. A. P. S.), Mr. C. P. Wheatstone, Mr. G. E. Walker, and Mr. W. Jarvis (Stanley Anglers), Mr. J. C. Murray, and Mr. R. Stebbings (Central Association), Mr. J. H. Stead, Mr. W. Griffiths, Mr. E. Bromley, &c. Mr. Mollett and Mr. Jouse, of the Grand International Fisheries Exhibition, had accepted invitations to be present, but at the last were unavoidably prevented. The guests altogether numbering about 100. After the loyal toasts had been given and the National Anthem sung, the chairman, in appropriate terms, gave "The Army, Navy, and Reserve Forces," referring to the successes of our arms in India, Zululand, and Egypt, as evidence of the bravery of our soldiers and sailors. He coupled with the toast the name of Sergeant Upton, one of their soldier members. Sergeant Upton in reply remarked that some people considered the British Army had degenerated, but the late successes had proved otherwise. After noticing the tribute of respect that had been paid to the returned troops from Egypt, he said nothing pleased soldiers more than the appreciation of their countrymen. Colour-Sergeant Williams, who had been through the whole of the Egyptian campaign, also returned thanks. The chairman then proposed the toast of the evening, "Success to the Silver Trout Angling Club," assuring those present it was in a state of great prosperity, and no words of his need be added to ensure a cordial response. Mr. Hawkins, whose name was associated with the toast, briefly replied, as one of the oldest Silver Trouters. The chairman, in highly complimentary terms, gave "The Thames Angling Preservation Society," and whilst regretting very much the absence of Mr. Thomas Spreckley, he was glad to find they had their old friend, Mr. W. H. Brougham, amongst them, and whose health he should give in connection with the toast. Mr. W. H. Brougham, after observing the pleasure he always felt on receiving an invitation from the Silver Trouters, said there were only two points to which he would refer in reference to his society—the first one was the netting of the reservoirs, which had enabled them to put into the river over five tons weight of good stock fish, all capable of reproduction, and the second was the action that had been taken in reference to the proposed new Bye Laws, and he had little doubt the result would be an eminent success. The vice-chairman proposed the "Three Central Associations," coupling with the toast the names of Mr. J. C. Murray and Mr. R. Stebbings. Mr. Murray replied on behalf of the "United London Angling Association Fishery Society," stating its object was to do for other rivers what the Thames Angling Preservation Society had been doing for the Thames, and to get additional waters for the benefit of the club anglers. Mr. R. Stebbings returned thanks on behalf of the "Central Association," which was now firmly established, and in a very prosperous condition. The vice-president, in giving "The Chairman," said that words would not express the feeling of respect that all held for their chairman—the name of Hatfield resounded throughout the length and breadth of the land. He was a great angler, a liberal supporter of all matters connected with angling, and always ready to work for their benefit. He called upon them to drink with great enthusiasm the health of Mr. Hatfield, and long life and prosperity to him. Mr. Hatfield, evidently overpowered with the ovation he had received, thanked them all very much for the great compliment they had paid him. The chairman them gave "Success to the Grand International Fisheries Exhibition of 1883," assuring them that arrangements had been made to afford every facility to the clubs in contributing specimens of fish, and instead of there being only one prize, other prizes would be offered. He coupled the name of Mr. Carrington with the toast. Mr. J. T. Carrington replied, and said it was intended in the proposed exhibition to have an immense aquarium fitted up with large tanks and table tanks, and which would doubtless be one of the best aquaria in the world. He considered that it would form a school of fish, and teach those who did not know it, how fish fed. He expressed his great indebtedness to Mr. Hatfield for his kind assistance in the Westminster Aquarium in contributing such large shoals of fresh-water fish, and he sincerely hoped in the proposed aquarium in the International Exhibition, there would be plenty to follow Mr. Hatfield's noble example, and assist him to fill the tanks with some splendid examples of all kinds of fish. Mr. Poole, in very concise terms, gave "Success to the Press," and connecting Mr. Brougham's name with it. Mr. W. H. Brougham replied. The evening was an enjoyable one, Mr. J. H. Stead, Mr. Packer, Mr. Hatfield, and others contributing some good harmony, and the chairman discharging his duties so effectively as to maintain the feeling throughout. As was well remarked at the close, "the evening had been an extremely pleasant one."

RIVER REPORTS.

MID-THAMES.

The river has rapidly run off from flood, and is now, as I write, in first-rate winter trim for any kind of winter fishing. At Henley, during the past three weeks, some forty-two jack have been had from Marshand New Mill pools, the only fishable waters out of the stream. At Medmenham and Hurley takes of 6 lb, 7 lb, and 11 lb. of roach have been had by Messrs. Girkie, Brooksbank and Lee respectively, and a Mr. Rodwell and house have also been tackling the roach. Thursday: Thames hourly improving in colour and condition, and prospect good all round for jack, roach, and perch for ensuing week.—MARLOW BUZZ.

Ancholme District.

But few anglers have been out during the past week, owing to the many and vexatious changes in the weather, but the few veterans who have faced Boreas and his snow blasts have been rewarded, in the upper pond, with some medium-sized pike in reward for their perseverance. I say pond, but the three together form a tolerably long one, of about 16 miles, *i. e.*, from Bishop Bridge to Ferriby Sluice, and taking it altogether it is as fine a piece of waterof its kind as can be found in any part of England. Vast contingents of anglers come from all the contiguous towns—Sheffield, Barnsley, Hull, Leeds, Rotherham, Wakefield, &c. Still, they seem to make no impression upon the numerous fish which crowd the waters. At present the stock fish is the bream, but there is a whole string of fish which might be profitably introduced, and which would thrive well, viz., carp, tench, rudd, barbel (?), chub, and last, but not least, black bass, which our friend, Mr. Silk, has again so successfully brought across the briny. The Commissioners make a nice thing by the sale of tickets, but I am sorry to report that they seem to be behind the spirit of the times With proper cultivation the water, in their hands, would recoup them six-fold the outlay spent on the introduction of any of the above varieties. If I lived a little nearer the water, I would make a reasonable bid for the fishing, and see what a private individual could do. Of one thing I should feel assured—it would pay. Why, we have here a stretch of water to which the Welsh Harp Fishery is small. Then we have, within easy railway communication, centres of population which would send their legions with weapons of warfare to kill, not their enemies, but their friends the fishes, and there would be such a frizzling in the frying-pans of the neighbourhood, that the odours would reach the noses of the aristocrats as guide along in the Pullmans, and lead them to fancy it was the savoury cooking of their own dinners, and not the steaming exhalations wafted on the wings of the western winds from the cottages of the poor; but I am poor-ly this week, so stop. THOMAS FORD.

Chichester.

Stormy weather the past week has proved beneficial to the pike fishermen, several fish coming to hand, but nothing exceeding 3½ lb. Live bait proves most successful. Trolling or spinning in the basin is out of the question, weeds and sunken timbers causing loss of temper, flights, &c. It is in the deep water pike most do congregate. I have not heard of a single fish being taken in the lower reaches. In the weekly competition, Mr. Levy took first prize with a pike of 3½ lb. with live bait. A second prize for the second best pike of the season is offered by the vice-president, Mr. Kerwood. The weather here is stormy and wet, not at all inviting to rodsters.—GEORGE F. SALTER.

Derwent (Chatsworth).

I am not able to send a favourable report, as the weather of this week is altogether dead against fishing, and will be for some days to come. There has been no bottom-fishing done since Saturday, and is now quite out of the question.—WHEATSHEAF HOTEL.

Dove.

The waters of the Dove are in excellent fishing order after the floods of last week, and capital sport has been experienced this week on all hands. The weather, however, appears somewhat unsettled, and is bitterly cold Grayling are biting voraciously at the bumble and cock-winged dun, the returns of sport to hand up to the time of writing being of the most encouraging nature. Some of the most frequented reaches of the river about Rocester have yielded better sport than for several weeks past, several anglers having carried off baskets of large-sized fish. Pike, too, are well on the feed, and are being taken freely with the large Derby killer, which is the best lure at the present time. Near Uttoxeter, several good specimens of the last-named fish have been landed, one weighing nearly 10 lb. Many anglers have been out, but I hear of no complaints of lack of sport. So far as my own success enables me to judge, I should say that followers of the gentle art have every reason for satisfaction.—SPLODGER.

[Arrived too late for last week.—ED.]

Owing to further heavy rains our river is again rising very high and thick, and piscatorial operations are practically dropped. The trout are now busy ascending the rivulets for the purpose of spawning, and I hope the water bailiffs will keep a sharp look-out for poachers whilst the fish are there. It will be several days before the water (even in the event of no more rain falling) gets clarified sufficiently to admit of decent fishing. When the weather becomes dryer and frostier I fancy both pike and grayling will be found well on the feed.—THE SPLODGER (Wednesday.)

Ilfracombe.

Sea fishing, Saturday. About fifteen maize of herrings was brought in by all the boats. Sunday and Monday, blowing a gale, a fine cod was caught from the Jetty, weighing 24 lb. Tuesday, several boats out and after a short drift they hauled some two maize, others only a dozen or so of herrings; one man said while hauling his nets a tremendous sea struck the boat and almost swamped it. Two conger were caught from the Jetty weighing 24 lb; an old man hooked a fish, he tried to haul it up but found it too much for him; he got a man to go out in his boat and haul up this large fish. When brought to the surface it was a small thornback. The old man was disappointed. Wednesday morning, boats out, but very few fish brought in. A cod, 18 lb.; a conger, 21 lb., and a ling, 16 lb were caught from the jetty with hand lines. Thursday, blowing a gale from S.W. with heavy rain.—E. COMER.

Leicester.

The change in the weather during the past few days has been very beneficial to anglers, and a fair number have been out, and, for the period of the year, have met with fairly good success, as both roach and perch have been biting well since last Monday. Among the most noticeable catches was that of Mr. J. Gilmore's on Monday, when he took twelve very nice perch; the largest weighed 15½, and the smallest 12 oz. Some good roach have also fallen to the share of several rodsters, and Mr. Jacques secured a good lot out of the waters in Hack's Meadow, several of which weighed over three-quarters of a lb. Other fishermen have shown moderately large takes of roach and perch. The Aylestone waters have been fairly patronised during the week and many have had nice catches of roach, perch, and chub. From Barrow-on-Soar reports are quiet. A few anglers have visited the Wreake, and, taken on the whole, have met with a fair reward for their endeavours. The weather on Thursday was showery all day, but extremely mild, and the waters in this locality in fair condition for angling.—ALERT.

Medway (Tonbridge).

The river has run down nicely, and by Sunday, in the absence of rain, will be in nice condition for all kinds of angling. A few hours' rain will, however, spoil it all again.—YE MEDWAY WATER RAT.

South of Ireland.

The weather continues unsettled, and the Lee and its various tributaries remain bank high—a hopeful indication of good sport in the Spring, and the best preventive against the devices of the poachers. The Inspectors of Fisheries have announced their intention of holding an inquiry next week with regard to drift nets. The object of the inquiry is to have a bye-law to make it illegal to have drift nets in boats in parts of the harbour other than where they are allowed to fish. The present bye-law against drift-net fishing only proscribes it within the harbour. Outside the limits of the harbour persons may drift, and licenses have been taken out under the pretence of fishing there, whereas in reality it is only a cover to enable them to fish inside the harbour. In consequence of the protecting clause, unless the bailiffs find a net in the act of illegal fishing, they cannot touch it, even though it is got in a boat miles away from the proper fishing ground. It is to obviate this evil, and to enable bailiffs to seize nets they have reasonable suspicion of being engaged illegally that the present inquiry has been promoted. This mode of poaching being extensively adopted nearer home, it is important that the power should be vested in bailiffs of seizing any illegal engine, though it may not be in operation at the time; and of all the subtle and destructive inventions for the capture of salmon the drift net is the most effective.—ANGLER.

Thames (Goring).

Water in very good order for jack and perch; a little too high for jack; water very clear, but by Sunday if it keeps fine, water will be a lot better for jack fishing. Water going down very slow. I have had two days' fishing since my last report; best day, 8 lb. of good perch, fishing with Frederick Marsh, 324, Oxford Street, London; perch biting very well. Here to-day, Thursday, Mr. Mills, of the Swan Hotel, Streatley, took some good perch, some going to lbs. Perch are biting very well with minnows.—JOHN RUSH.

Thames (Marlow).

F. Plumbridge, fishing with Bob Shaw's punt, caught ten fine perch, best weighing 1½ lb., in the Marlow Reach. Hibbes had a good run for a jack, but no luck. Water getting better for fishing.—A. MASKEN.

Thames (Oxford).

Yesterday and to-day the water has gone down very rapidly, but it is quite beyond my power to prophesy when it will be possible to get along the banks dry-shod. The Cherwell and the Thames are in splendid condition, both being as clear as crystal, or, as our Nottingham friends phrase it, gin-fine, and if we could only enjoy a little settled weather and bright sunshine, the river would very quickly return to its usual limits. On Sunday, Mr. Shirley, when fishing above Godstow, had six jack and eight fine roach, the former turning the scale at 9 lb., and the latter at 7 lb. respectively. I saw several people on the same day trying the city waters, but nothing worth recording had been taken. I was very much amused at the cursory remarks of an aged vendor of watercress, who was fishing with a stout ash pole and a whipcord line off the side of the fisher-row. Because he was unable to get any sport, every now and again he gave his line a vicious drag, emphasized by a sounding full-flavoured expletive. I am informed by my friend, Mr. Jas. Corbett, of George Street, who catches more chub out of the canal than any other fisherman who resorts to its banks, that a 12 lb. bag, consisting of nine fish (all chub) was taken on Tuesday last by one of the company's employés. Mr. Corbett was out to-day, but owing to the strength of the winds his take was a very poor one; one day last week he landed a rather unusual fish. Whilst whipping under a bridge hole, to his great surprise, a large mussel had seized the bunch of gentles he was using as a bait. I went to Godstow this afternoon *via* Wolvercott; I first tried the meadow pools, where I succeeded in bagging half a dozen decent roach; but finding sport grow slack, I proceeded through the village to Godstow Lock, where I had a struggle with a large chub, which escaped through the binding of my hook giving way, so I packed up my tackle in disgust and came home, gaining a wet jacket and a touch of neuralgia for my trouble, and to pile up the agony, I found I had lost my tobacco. So I had to tramp two miles and a half through a pelting rain storm, and do the best I could with some partially dried hawthorn leaves, which, to say the least of it, did not quite possess so fine a flavour as Wills' Bristol birdseye

P.S.—I hear that a jack weighing 27½ lb. was caught to-day in Sandford Pool; but I cannot vouch for the truth of the statement until I write again.—CHERWELL OTTER.

Thames (Richmond).

The water has now got into very good order again, and the sport is coming to the fore. The bank anglers have had a very good time of it with the roach, dace, and bream, one bank angler on Saturday last got 19 lb. of splendid roach and dace. I have not been able to let you have any reports of our own doings, as they have not been worth reporting, though we had plenty of patrons down. The prospect for next week looks good, and I anticipate a good report next week, as I fully expect some good sport. The time each fisherman has been out with patrons during the week is as follows:—C. Brown three days, E. Brown three days, H. Wheeler two days, Joby Brain three days, H. Howard one day, John Bushnell three days, and the average takes are between two and three roach and dace per punt each day.—JOHH BUSHNELL, fisherman.

Trent (Newark).

The weather has been unsettled most of the past week, and the water has been in a very unsatisfactory condition. During the latter part of last week, and the beginning of this, the water was still running at a great height, but was not amiss for colour. A few anglers tried their luck, but sport was not very good. I heard of a decent chub being taken with live bait weighing 4 lb. The back waters had fined down very nicely, and pike fishers got out their tackle, but nothing beyond a few small fish were taken. Heavy rains have again put a stop to angling operations, for the river is now running bank full, and very much coloured. No angling at present. Those giant chub that I referred to last week have got a further respite.—THE TRENT OTTER.

Trent (Nottingham).

The river in this district is again in flood, and all attempts at angling are futile. Sport, in fact, for days past has been most indifferent, only a few small lots of roach, dace and bream having been brought in from Shardlow and Weston, which are two of our best reaches for winter fishing. The other day some fellows were publicly hawking on a barrow in the streets of Nottingham an enormous quantity of pike, the largest of which, I am certain, did not weigh 3 lb. The general average may be set down at ½ lb. Where the fish were got from no one seemed to know, but it was evident they had been poached. Rain fell in torrents on Thursday, and had not ceased when this report left.—THE MAN AT THE CLUBS.

Tweed and Teviot.

Since my last paragraph detailing the salmon angling on this border stream, some further excellent takes have been effected. On Thursday week the weather was favourable to angling, and the river being in excellent condition, good sport was obtained on the various casts in the vicinity of Kelso. On the Floors lower water Mr. Moffat captured eight salmon, the weights of which were 27, 24, 23, 20, 19, and three of 16 lb. each; and on the Floors upper water, Dr. Mackenzie, Kelso, had six to his own rod, the average weight of which was about 18 lb. Mr. Alfred S. Caldwell secured a fish of 21 lb., and on Sprouston Dub Mr. Whymper had also one of 19 lb. On the Ednam House (Junction) water Mr. G. Forrest, Kelso, killed two salmon of 21 lb. and 22 lb. respectively. On the Hendersyde water, same day, Captain Griffith caught four salmon, the heaviest two weighing 20 and 27 lb.; and on the Under water Sir George Waldie Griffith had a couple to his rod, the heaviest of which scaled 26 lb. Mr. Moffat killed two salmon on Floors Upper water on Friday; and on the Sprouston Lower water Mr. Calden secured two, 12 and 21 lb. Mr. Whymper took a 24 lb. salmon out of Sprouston Dub, and Mr. Wood, London, one of 15 lb. On Saturday almost every angler who plied his line had good sport. On Floors under water, Mr. J. Croall, Kelso, killed ten fish, which is the largest take that has yet been obtained this season—the weights being 23, 23, 21, 21, 20, 20, 20, 20, 19, and 18 lbs—the gross total being 205 lbs. On the upper Floors water, Mr. Moffat captured three salmon and a grilse. On Birgham Dub, Mr. Denison caught three fish of 20, 19, and 18 lb. respectively; and Mr. Drummond obtained one at the Junction weighing 15 lb. Out of three fish caught in the Hendersyde Upper water by Captain Griffith, the heaviest two scaled 27 lb.; and on the lower cast Sir George Waldie Griffith had also three fish, the largest of which turned the beam at 27 lb; and on Sprouston Dub Mr. Whymper had one of 14 lb. On Sunday last both rivers were in flood half a foot, the water being of a "snow-broo" colour: but fair takes were got all the same. On the Hendersyde water Captain Waldie Griffith had a 20 lb. salmon and a grilse, and on Sprouston water Mr. Whymper had a brace, while on the Dub at Birgham Mr. Denison killed one. On the Ednam House upper water Mr. Gibson, fisherman to Mr. Drummond, had a pair. On the Floors upper water Mr. A. Steel killed five—30, 26, 21, 21, and 21 lb., and on the lower water Mr. Forrest had a couple. On Tuesday, on the Floors upper water, Mr. Croall killed three—25, 23, and 19, and on the lower water Dr. Mackenzie had six—24, 24, 21, 18, 14, and a kipper grilse of 12 lb. On the Sprouston lower water, Mr. Somerville had a brace, and on the Dub at Birgham Mr. Denison had a like number of salmon, while on the Ednam House water Mr. Drummond killed one fish. Owing to Tuesday night's rain both rivers are to-day flooded to the extent of nearly three feet, which will put a stop to fishing for a few days. We regret to announce the reappearance of the fungoid disease in the Tweed. As far as has yet been ascertained, however, it is principally confined to bull-trout, although a few salmon have also been observed with the malady on them. Several cases of early spawning have also occurred, two or three 'kelted' fish having been caught lately. The salmon angling on these rivers finishes next Thursday.—MAXWELL.

Wharfe (Yorkshire).

There has been very little sport worthy of record during the past week, and although several crack local hands have been out "swimming the worm," only small catches have been the result. The weather is stormy and wet, and quite unlike that usually experienced at this season of the year; every one attributes it to "the comet."—FRANCIS M. WALBRAN.

Witham (Boston).

Swollen waters, rain, and frost are the general drawbacks to angling in this district, and among anglers there is a good deal of grumbling as the hard times, for now something like a month has elapsed without a couple of days of favourable weather at a time when the water has been at all fit. All the way down the Witham is inaction—the larger drains are unfishable, and the smaller have been clogged with ice. The little sport there has been has comprised pike only. On Friday there was a brace taken at Langrich, and on the same day some were taken from the South Fortyfoot. The best fish of the lot was one of 4¾ taken at Hubbert's Bridge. At Cherry Corner, this week, there were several taken, the best being one by Mr. Bellinson, rather over 5 lb. Roach fishers have been quite out of it, and what had been required for bait have been very difficult to get. The prospects as I write are not very bright. The weather has been milder, and Wednesday brought rain. This morning it is rather better, but the barometer has a downward tendency again.—THE YELLOW BELLY.

Wye and Derwent.

The continual rises on the Derwent since my last report have prevented anything like good sport, in fact, the Derwent had a very large flood on it, and was out in the meadows between Rousby and Ambergate, and the nets were at work. I hear that there was a fair quantity of fish killed during the time the river was in flood. The Derwent is running down nicely to-day (Thursday), and will have some first-class bottom waters on it for next week. There will be no fly-fishing in Derbyshire for some time now. Maggots and cockspur worms are the best baits that can be used for either grayling or coarse fish.—G. J. EATON.

Yore (Hawes).

True to my prognostication in my last, snow fell to a considerable depth. On Tuesday night a thaw set in with much rain and a heavy west wind, so that by Wednesday morning the river was over its banks. Water in splendid trim this (Thursday) morning, but will in all probability be again in a flooded state before the week's end. Weather very cold and boisterous, so that fishing is anything but comfortable.—JOS. CORRY.

Yore (Lower waters).

The salmon fishing on this river for the past season (which terminated November 15th) has been a complete failure, for there were no heavy floods at the proper time to enable the fish to ascend the numerous weirs which impede their progress to the upper portions of the river. The autumn grayling fishing also has not been so good as it was last season, owing, no doubt, to the continuance of high waters and absence of frost, which is always needed to bring the fish thoroughly on the feed. Last week, however, sport was rather better, R. Coldbeck killing several nice dishes chiefly with the red worm. On Saturday I had a nice basket of twelve brace, weighing 8¼ lb. These were taken partly with fly and partly with worm, the flies which killed the best being the October olive dun, and the local pattern known as the "fog black"; this last named is considered "great medicine" on the Wharfe.—FRANCIS M. WALBRAN.

THE CLOSE OF THE FISHING SEASON IN KILLALOE.

The 1st November came, and with it the annual merry-making of the sportsmen of this town. Every year at the close of the fishing season an extensive "spree" is given in this place in honour of the veteran Isaac. Like true sportsmen, this time they celebrated the eventful day of their sporting calendar, not in a gay dining hall with grandeur and carpet warriorism, but with their larder and provision beside the river's bank. Like every gathering of convivial Irishmen, they had their pipers and dancing; and such a scene of harmony and joy was set up that we are sure no pen could adequately describe. The cry was "On with the dance; let joy be unconfined!" from every one around. When the whiskey and music galore had roused the spirits of those happy sons of Walton, and when the piper and dancers had done their part, our noble warrior, Mr. John White Malone, took the chair, and formally opened the joyous proceedings in a short few words, which gained for him the loud applause of his brother anglers. On his right sat Messrs. J. R. Wall, Christopher Macavoy, J. P. Hayes, and Daniel B. Ellis; on his left were Messrs. William T. Ellis Sylvester, J, Hurley, and James MacAuliffe. Several others of our noted anglers were present at the fête. In the evening the happy meet was concluded by a vote of thanks to the chairman, which was received with great applause; and as the revellers were homewards bound, they cheered loudly for Isaac Walton, Messrs. Malone, and Hurley, the Killaloe correspondent of the *Irish Sportsman*, &c.—CLEVELAND.

A GOOD TAKE OF PIKE.

MR. JOHN KNECHTLI, who has on many occasions distinguished himself in large captures of pike, and contributed some handsome specimens of these fish to the Gresham Angling Society, has again been well in amongst some big fish, and on this occasion brought away with him nine splendid fish weighing from 5 lb. to 16½ lb. The three largest fish weighed respectively 16½ lb., 15¼ lb., and 12 lb., all in first-rate condition. There are few anglers who fish with greater patience and perseverance than Mr. Knechtli, and, speaking from personal experience, none more deserving of the good specimens that he has placed upon record as proofs of his skill. In addition to those he has presented to the Gresham Angling Society, he has in his office, in Carey Lane, a case of three handsome examples of pike, well worthy of inspection and admiration. B.

THE "FISHING GAZETTE" OF ENGLAND.—One of the brightest journals that comes to our desk is the English FISHING GAZETTE, which literally sparkles with good things. From the "frontispiece" the portrait of good old Izaak Walton casts a benevolent look of welcome, and on either side are picturesque scenes of sea and river fishing. Considerable attention is given to American fish and fishing; an elaborate article in a recent issue being devoted to "Grayling Fishing in Montana."—American *Turf, Field, and Farm.*

THE BURBOT OR EEL-POOT.—This curious fish (*Lota vulgaris*), spoken of by Pliny as the "Mustela" or "weasel-fish," is very rare in our immediate rivers, but a very fine specimen has recently been taken from the Lark, near Mildenhall. They are not often found over a pound in weight, but the one under notice weighed 4 lb. It has been sent to Mr. William Howlett, naturalist, Newmarket, to be preserved, and will form a very interesting specimen in the collection of fish to be exhibited by Mr. Howlett at the forthcoming International Fisheries Exhibition.—*Norwich Argus.*

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

ANSWERS TO CORRESPONDENTS.

J. B. J.—We think you will find No. "O" in Mr. Hall's sizes of eyed hooks quite small enough for the Derwent in winter or spring. Of course when the water is at low summer level and clear as glass you may want the smallest sizes; it depends a good deal on the size of the natural fly which is "on." For instance, when the stone fly is on, and for some time after, its imitation is the most killing fly you can use either on Rye or Derwent (we wish we knew some maker who used a permanent yellow for the hackle), and yet it is one of the largest flies.—Ed.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

FLY TYING ON EYED HOOKS.

Sir,—I have much pleasure in sending a description of new method of fly-tying on eyed hooks, according to your request. Although the original letter in the *Field* of August 5th was written very hurriedly during a railway journey, and might perhaps be more lucid in parts, I have thought it best, for several reasons, to reproduce the following extract without any substantial alteration:—

"As there are still many different opinions in vogue as to what an artificial fly should represent—whether it is to be a monstrosity of the angler's invention, or a close imitation of a natural insect—I may as well state at once that I have very little faith in what Kingsley calls 'casualty flies,' and for trout fishing in southern streams I depend almost entirely on a knowledge of entomology, and the use of the most life-like and skilful imitations that I can get. This being premised, it follows that I do not pretend to have reduced fly-tying to a uniform system, which will suit under all circumstances for every fly alike. Duns and spinners, alders and sedges, black gnats and midgets, bumbles and palmers, all present little peculiarities of their own, about which no definite rules can be laid down, and a method of tying which suits one kind of fly in every details, requires judicious modification when it is applied to the imitation of an insect of a totally different species. But if a man has thoroughly mastered the dressing of one class of flies, his own common-sense and ingenuity will do the rest, and will be more valuable than any written instructions. My present remarks, therefore, will be limited to an attempt to describe a method which makes a good floating fly of the ephemeral class—one which shall be very durable, and at the same time fairly neat in appearance, and which, if properly thrown, will alight with wings erect, and float down attractively over the rising fish.

Take a small eyed hook, No. O or OO (Hutchinson's, of Kendal, number and make), and give three or four turns of well-waxed silk up to the eye, and two turns back again; this is merely as a substratum on which to tie the wings without danger of their slipping round the shank of the hook. Place the hook in the vice, and, to keep the tying silk taut, twirl it two or three times round the screw-head. This is a useful dodge, which I use constantly, to avoid unnecessary half-hitches. Then pick out a starling's feather, and strip off all the fluffy part at the quill end up to where the fibres of the feather are pretty nearly of one length. Mark off with the dubbing needle a nice even strip of about half an inch in width, pull the fibre gently back with the forefinger and thumb of the right hand, till they all stand even and at right angles to the quill; then, with a smart twitch, pull the slip off. Go through this process again, and put the second slip evenly on the top of the former. Fold the double slip down the middle, and you then have a compact quadruple slip, about a quarter of an inch wide, or rather less when the stray and errant fibres have been discarded. Take the wings in the finger and thumb of the left hand and apply them to the hook, with the butt end towards the bend of the hook, and the soft fibrous extremities projecting over the eye, while the silk is fastened tightly round once or twice with the right hand. Then the wings are pulled back into the natural position, and three or four turns of silk made in front between the feather and the eye. The wings are then divided with a needle, and the silk passed between them once, then round the hook, and through again to the front. The silk thus forms a cross between the wings on the top of the thorax. Then take the hackle, and tie it in by the butt between the wings and the eye; leave it there to finish off with. Snip away the greater part of the refuse at the butt end of the wing feather, leaving enough to tie down and slightly taper the body, as the silk is carried down to the bend of the hook. Put in the whisks, body-silk, quill, or dubbing, and bring the tying silk up to the wings, and take a half-hitch. This, it will be noticed, is the first knot which is necessary. Follow up with the body, and finish it off. Lastly, with the tip of the hackle in the tweezers, take one whole turn in front of the wings, then between, round, and back, making a figure of eight knot with the hackle, just as before with the silk. Fasten off behind the wings with a couple of half-hitches, trim off stray fibres and hackle points, and the fly is finished.

"If the fly is wanted for fishing wet, I should put only half as much feather on, and omit the figure of eight between the wings.

"However elaborate this method may appear, it is really extremely simple and rapid in execution; and, of all the methods I have tried, this makes the most killing fly, though not perhaps the neatest. Anyone who considers excessive neatness the first desideratum will have to pick his two wings separately from right and left feathers, and indulge in all sorts of niceties, which may result in a very pretty fly-book; but the flies will not float so well, and will not kill so well—that, at least, is my experience.

"I puzzled out fly-making for myself, without any hints from anyone. After making two or three hundred flies, I made the acquaintance of two other amateur fly dressers, with whom I have compared notes frequently during the last two or three years, and to whom I am indebted for several wrinkles. Beyond this I never had a lesson in fly-making in my life, and I have never so much as seen a professional fly-dresser at work; so that I must ask readers of this letter to take it for what it is worth, and not be too critical. Still, I have proved beyond a doubt that, for duns and spinners the method I have described makes an admirable fly. So well satisfied am I with the results this year, that I think it is extremely improbable that I shall ever adopt any other style."

Since I wrote the above, I have had another month's experience of small flies tied on this principle, and I especially claim for them that they fish well, as I said last week. To show what I mean, I enclose for your inspection, Mr. Editor, two flies which I was using at the end of the season, and which are now picked out of an odd dozen or so, taken off my hat at the close of the last day. They have both had considerable use, and I venture to say they would float as well and kill as well now as they did when quite new. To my mind, this is a much better quality in a fly than great neatness, for, as every angler knows, the delicate works of art which look so pretty in the fly book frequently prove very disappointing aften minutes' use.

Your correspondent, R. A., asks about dyed hackles. I use them constantly; one of the enclosed flies has an olive dun hackle, of a shade which can only be got by artificial means. But I admit that blue shades are more difficult to get fast and permanent than any others I have used. For the most part, I use Judson's dyes, and find them very handy, and the colours do not wash out. In Mr. Frost's letter, "Indian dyes" was a misprint. He told me a few days ago, he was referring to Judson's dyes, such as I constantly use.—I am, &c.,
H. S. Hall.

[Our fly-fishing readers will join with us in thanking Mr. Hall for his description. The flies are splendid specimens of fly-tying. We only wish that Mr. H. S. Hall were a professional fly-tyer; we would give him a good order at once! We once before referred to a fly he sent us as being beautifully made, and we have now the pleasure of saying that we caught a 2-lb. trout with it, which had refused two or three other flies we put over him.—Ed.]

HOW TO DRESS THE "CUSS."

Sir,—I notice "R. A.'s" communication in your issue of the 4th inst. relating to fishermen's "cusses," as he terms them.

I should be glad if he would try the following imitation and give his opinion after a trial:—Instead of making the body of black silk, let him take a strand from the long black feather of a cock's tail, and wind neatly and closely up to the hackle, which must be a small greenish coppery feather from the neck of a starling's wing—young starling's quill. This is somewhat like I dress the fly called "Broughton's point." I knew the inventor of it well, but I think he used deep blue silk in the dressing. As it is an old and a great favourite of mine, I give my style of dressing it. Body rather short, of a couple of strands as above; legs full, by winding round the whole of the long pointed copper-coloured feather from starling's neck, in the midst of which a very small portion of red worsted should show; wings, starling's quill, and to stand slightly apart; hook, No. 1. The red worsted must not by any means be a prominent colour in this fly—only enough to swear by—and must not project below the hackle. It is a handsome little fly when well-dressed, and has afforded me great diversion at times; there really can be no better general point fly used through the season, particularly on showery days. It is essentially a point fly, and should never be used as a dropper. Over thirty years ago I killed 20lb. weight. of trout, all good fish, with this fly alone, without a stoppage, on a small tributary of the Eden.

I am partial to dressing small flies with the strand of some feather I can generally hit upon, and in conjunction with silk, either spun with, or ribbed over it, produce a better and a neater imitation than with a mixture of dubbing; besides, there is a sheen, more or less, on most feathers selected for this purpose, which, I think, is favourable in the artificial. Of course there are flies of a decided colour, which no old angler would hesitate about the materials necessary for dressing them. I speak merely of particular instances where I adopt this method, not that there is anything new in it, seeing that strands from peacock, ostrich, &c., have been used in this way for generations; yet I think if anglers who make their own flies were to pay more attention to this method, they would find it advantageous. There is hardly a bird of any size that he cannot make a selection from, though the strands should not have much "stem" in them, or, as the housewife might say, the less "bone in 'em" the better.—I am, &c.,
J. T. H.

Southport, Nov. 21, 1882.

THE RED CATERPILLAR.

Sir,—In common, no doubt, with many of your readers, I have often been driven nearly to desperation by seeing the grayling on the rise, and my best endeavours to get them to touch my flies useless. I notice in the *Scientific Angler*, by Mr. Foster, of Ashbourne, an allusion to the killing powers of the red palmer caterpillar. Will you or any of your readers kindly state whether you have found it a killing fly for grayling, and whether it is superior to worms?—I am, &c.,
Arncliffe.

Bradford.

[The red palmer, whether dressed small or large, is, of course, a standard fly for trout or grayling. We have not tried it much in the way described by Mr. Foster, *i.e.*, to let it sink a foot or two under water, and work round a pool with the current. We have tried in this way twice when the grayling were midging, but it was useless. Grayling are taken on the Dove with Foster's caterpillar, as we have seen them.—Ed.]

SELLERS OF BIRD-SKINS FOR FLY-TYING.

Sir,—Noticing the queries about the above on page 546 of the Gazette, I beg to send you the following addresses in Germany where bird-skins can be obtained:—Mr. W. Schlüster, 8, Wucherer Strasse, Halle a. Saale; Mr. H. B. Möschler, Kronförstchen bei Bautzen; Mr. Rudolph Koch, Münster; Mr. T. F. G. Umlauff, St. Pauli, Hamburg.—I am, &c.,
Max v. d. Borne.

NOTTINGHAM REELS—SPINNING FOR PIKE.

Sir,—The writer of the article, "Discussions at our Club," states that he prefers the "Nottingham" reel to have a slight check. This is easily arranged by taking the brass nut off the spindle and substituting a leather one, cut from a bit of good English bark-tanned sole leather. Any shoemaker will give you a bit and cut a hole through it with his eyelet punch to fit the spindle of the reel. This can be tightened or slackened, allowing the reel to run easy or tight as required. Mine are all fitted that way, and I use no other kind, whether for pike, fly, or bottom fishing.

These reels are now made so that the revolving part overlaps the other, making it impossible for the line to catch between the two. If the reel is placed far enough from the bottom of the rod, only one hand—the left—is required to make the cast, as the butt need never be taken from the hip, the reel being controlled with the thumb of left hand. In winding up the line, I find it best to let it run over the first finger, or it coils too loosely on the reel.—I am, &c.,
S. Howarth.

Burton-on-Trent.

HOW TO HOLD THE ROD IN NOTTINGHAM SPINNING.

Sir,—I was pleased to read the article in last week's Fishing Gazette under the heading "Discussions at our Club, by the Secretary," and think the instruction there tendered upon Nottingham style of casting would enable would-be spinners to acquire that much to be commended mode of fishing. My object now is to point out the one vital fault, to my mind, where the writer says he prefers the left hand to be below the right and alongside the reel, as the time taken in changing is "inappreciable." Surely, Sir, if it be requisite to change the hands after checking the winch, why not start with the right hand alongside the winch, and prevent bungling and an unsightly style of fishing? Again, the right hand has a far better command of the reel, as it is nearer the outer rim than the left hand. As to the change experienced when getting tired, the spinning from right or left shoulder is sufficient relief.—I am, &c.,

THAMES NOTTINGHAM.

[We quite agree with "Thames Nottingham" (who is, perhaps, the best hand with the Nottingham reel living), that in learning the style it is much better to use the left arm, in fact, the writer of the article referred to said so, but added he preferred the other way himself. The fact is, a man ought to practise so as to be able to use either arm in casting, whether in spinning or fly-fishing.—ED.]

SPINNING—THE BATTLE OF THE STYLES.

SIR,—The discussion at that model club, the "Occabot," as described by the secretary in your last week's issue, was unfortunately interrupted by the entrance of "Red Hackle," or we should, no doubt, have heard the reply of "Ledger" to "Plummet's" arguments in favour of the Nottingham as against the Thames style of spinning.

With permission of our friend, the secretary, I will endeavour to describe from imagination the conclusion of the discussion had it not been so abruptly terminated:—

Ledger—(By the way, I think I am acquainted with this gentleman, as, indeed, are most anglers; but does he not spell his name without the "d"? after a few sips of the "Scotch," so kindly provided by "Tweezer."—"Plummet, old friend, you are a partisan, and like most partisans are scarcely fair to your opponents. I have never heard it claimed for the Thames style that it was equal to the other when fishing from the bank, nor when wading in the water; that superiority in the Trent style is conceded, but there the concession ends. What I maintain is, that in spinning from a boat or punt, the former is the better system You will never convince me that you can impart as taking a motion to your bait by the winding of a winch, as can be given by an adept of the other art by the delicate finger manipulation with the left hand, combined with the working of the point of the rod with the right. Let me here read an extract from a letter which appeared in the FISHING GAZETTE soon after the first tournament. The writer says:—'Now as to the true art of working the bait, and the keen sport of playing your fish when hooked, there can be no comparison between the two systems. The one man plays his line with the tips of his finger and thumb, wherein is situated the most acute sense of touch; the other, with the mechanical winding of a wooden reel. And, although by winding in the bait with the reel it spins more evenly the whole way back, still, to my mind, that is less attractive to the fish than a bait played with a series of graceful leaps, as many of our Thames men know so well how to work it. Again, in playing the fish when hooked; of course, grinding him on the reel is an effectual way of putting the screw on him, but there cannot be the same exquisite sense of sport as is enjoyed by the man who feels every struggle and plunge communicated through the line to his fingers; much in the same manner and as acutely as the other sense—hearing—is excercised by two persons conversing from a distance by means of the telephone.' I noticed that when casting, you actually recommend turning your back to the object aimed at. This seems literally as well as figuratively a roundabout way of throwing straight. The Thames spinner goes to work much more directly. With the rod grasped firmly in his right hand, the butt being planted in the hollow within his hip, the line gently clasped by the forefinger and thumb of his left hand, he stands with his *face* to the water, and can throw with equal ease from his right or left shoulder, thus being more independent than the Trent spinner of trees or bushes which may be growing on either side, and in case of trees on both sides he is as much master of the situation as is your Nottingham man on the bank amidst the brambles and weeds you so much affect; for the latter requires so much room in order to allow his line to describe a vast semicircle ere it reaches the point, that on a narrow river bordered by trees he is simply 'not in it.' You say that 'Your Nottingham adept can work fully three times as fast as your Thames style will admit.' Surely, my friend, your zeal for your pet style is running away with you. I say that your Nottingham adept cannot. And if he could it would be of no advantage to him, unless he wanted to see how nicely the bait spins on the surface. Plummet, your're wrong; and if you want further proof how wrong you are. I will tell you that you are wrong in the practice of your art. The changing of your hands in casting I don't like at all: it is anything but graceful, and in case of a run immediately on reaching the water, might be disastrous. With regard to the distance capable of being thrown by the two styles, we fortunately need not resort to theory, but can prove it by figures. On examining the scores of the professionals at the two FISHING GAZETTE Tournaments I find that on the first occasion the Thames representative threw 50 yards, and the Trent man 45 yards; and on the second occasion the former 55 yards, and the latter 44 yards."

Tweezer.—"Well, that last argument reminds me of that terrible hammer at the Richmond Piscatorials. It is a 'clencher.' Ledger, pass the Scotch to Plummet: he will need a little after that."

Ledger.—"Gentlemen, I hope that you and my old friend Plummet will forgive my warmth in defence of my favourite sport. Recollect, I don't claim for it that it is superior to the other in every respect; it has its disadvantages as well as its advantages, but in my humble opinion the latter decidedly prevail; and in this I have the concurrence of no less an authority than Mr. J. P. Wheeldon, whom I had the pleasure of hearing discourse on this subject to the Richmond Piscatorials, of which capital club I happen also to be a member."

On Ledger resuming his seat the subject was continued by other members, the general opinion being that although their best thanks were due to Plummet for his able exposition of the Nottingham style, he had failed to prove its superiority to the Thames method.

The above, Sir, appears to be the more correct termination of the discussion, to your obedient servant

V.

PIKE SWALLOWING FISH TAIL FIRST.

SIR,—The other day I caught a pike about 4 lb., and seeing it was very much distended, I opened it and found therein a young pike of about ½ lb. That did not astonish me so much as the fact of it having been swallowed tail first; while the tail was partly digested, the head was perfect. Several friends also saw it and wondered.—I am, &c.,

Wisbech. C. S. S.

[This is curious, because we know the general opinion among pike-fishers is that pike always swallow fish head-first.—ED.]

NETTING THE ASSOCIATION'S WATERS.

SIR,—Will you kindly allow me to say a few more words upon this subject? I do not wish to occupy space in your valuable paper without good reason, nor to carry on a long correspondence with "L. B.," who thinks he has hurt my feelings by misapplying the word "pitiful" to my letter. I am not so thin-skinned as he thinks, but I consider it necessary to correct his mis-statements, and I cannot allow him to be the judge as to whether he described my "effusion," as he terms it, truthfully or not by using that word.

I beg to confirm my report as being true in substance and in fact, and am prepared to give Mr. Hoole such information that will satisfy him I was justified in making it, and I may add my motive was good in doing so, which "L. B." will not do me the justice to allow; on the contrary, he now makes statements which are not correct, and he carefully avoids answering my queries in my last letter, which certainly proves a weak case on his part, and I am sorry for him. He says Mr. Hoole, of course, pointed out to "Red Fisherman" how his report erred on all points. Mr. Hoole did no such thing; and I refer "L. B." to Mr. Hoole's answer. Again, "L. B." says that I promised to follow his advice. Why, I never thought of such a thing—I prefer my own judgment. I merely commented upon his advice, and what I said was, that I should take immediate steps to have the nets set wrong. I have no objection to fair criticism; but, when a person takes upon himself to criticise a correspondent's truthful report, and, by making mis-statements, conveys just the opposite meaning, I do object, and say it is very unfair, and, moreover, I hold that "L. B." has no right whatever to question the truth of my report, unless he can show proof to the contrary, and this he cannot do.

I am indebted to a friend, who has been good enough to send last week's FISHING GAZETTE on to me here in Scotland, for the opportunity of correcting in this week's GAZETTE "L. B.'s" erroneous statements. I shall return to England at the end of this week, when I shall be prepared to meet Mr. Hoole by appointment, if he thinks it necessary, and get my report both supported and justified.

"L. B." asks if that smile of the simple native was like that of Bret Harte's "Heathen Chinee"? Oh dear, no; it was a pitiful smile, and the native is not simple.—I am, &c., THE RED FISHERMAN.

MANCHESTER AND DISTRICTS AMALGAMATED ANGLERS' ASSOCIATION.

SIR,—Will you kindly allow space for a few lines in further reply to your anonymous correspondent, who still delights in signing his letters "Trout."

On referring to our weight-book, I find that the trout weighed in last January is the only instance where this class of fish has been weighed in for a prize during close season since our society commenced. The fault in our laws was then pointed out, and by our resolution of April 22nd we remedied the evil. Why "Trout" should write you on this subject in October (six months afterwards) I cannot understand, unless he is a renegade member of our society, and has some private grievance, and adopts this style of bringing our society into disrepute, and hide the authorship by signing "Trout."

How is it that "Trout" has not given the same prominence to the small jack, about 6 oz. weight, that was caught by either himself or his informant on the same day and in the same water from which our member caught his trout? What would your Thames anglers think of taking such a fish, no matter what season of the year?

In conclusion, our members are not ashamed of anything they have done, and have not hesitated to explain the whole matter to your readers; but I must say that I think your correspondent "Trout" has acted a very cowardly part throughout this correspondence in not affixing his name to his letters. I shall consider that he is heartily ashamed of his own opinion unless he does so.—I am, &c., W. ASHWORTH.

Salford Friendly Anglers' Society,
November 21.

ROACH BITES AND CRACK ROACHERS.

SIR,—I and, I daresay, many more of your numerous readers, have been very much amused at some of "Mark Antony's" theoretical effusions on angling matters. I say theoretical, for I cannot conceive how any practical man could publish such statements as appear in his last production on roach-fishing with paste. Allow me to inform "M. A." that for a roach angler using paste to lose two bites out of six would be a heavy percentage, but for a man to lose four out six and call himself a "Roacher," would be ridiculous in the extreme.

Fancy, ye London anglers, if you can, sitting on the banks of the Lea fishing with paste, and having bites which take your float down, and then losing four out of six. Why, it's enough to make the hair of brethren of the roach pole stand on end to think about it!

I should like to hear the opinions of some of our Lea cracks on the subject —I am, &c., ANTI-THEORY.

BRUNSWICK PISCATORIAL SOCIETY.

SIR,—Having noticed again, and this time in your world-famed journal for anglers, that the Brunswick Piscatorial Society had broken up, allow me to inform you that it is an unwarrantable assertion. The society has not been dissolved. The fact is, several of the members feel greatly surprised at such a report being put forth. There was certainly a little unpleasantness between the Treasurer and Mr. Copeland, which, to a great extent, was owing to Mr. Copeland insisting upon taking the receipt books home every meeting night in his bag. Mr. Copeland has tried to start another society at Walworth, and succeeded in inducing two or three of the members to join, but I have discovered that it has fallen through.

A resolution was passed at our meeting on Wednesday, the 15th, desiring Mr. Copeland to furnish a balance-sheet, and also to return the books belonging to the society. Trusting you will insert this, which will greatly oblige the members of the Brunswick Piscatorial Society,—I am, &c.,

Nov. 23. MILES DOUGHTY, secretary.

TO "BITTERN."

SIR,—We have a letter for you, but have mislaid your address; kindly send post-card to THE EDITOR OF THE FISHING GAZETTE.

SPRATS AS SPINNING BAIT.

SIR,—Will you kindly inform me, through the FISHING GAZETTE, if sprats are good bait for spinning and trolling for jack or perch?—I am, &c,

Walworth. J. HART.

[Sprats make splendid spinning bait for jack, being brighter than any dace; the only drawback is that they are rather tender. When we use them, we use an F. G. spinner, and then they last a long time, and spin splendidly.—ED.]

FISHING IN THE MOLE NEAR REIGATE.

SIR,—The following particulars about the Mole, near Reigate, may be of some service to your readers. Sidlow is about 2 miles from Reigate by the Brighton main road, and the fishing on both banks left of the road is, to the best of my belief, free (as I have never been questioned). Jack are caught mostly on the side nearest Reigate; but roach, though numerous, run rather small. The bream run large, but are rather difficult to catch.

Flenchford Bridge is about 2½ miles by way of the Heath. The fishing is free on the right bank nearest Reigate but the opposite side is preserved; roach and chub are plentiful under and near the bridge, depth about 4 feet; it is shallow till nearly the end of the field, where there are good chub and roach. In the next field are some fairly good roach swims average depth, 5 feet; there are plenty of jack in the deeper parts, but they run small, and in all parts of the river the sunken roots are troublesome, and great care has to be taken or breakage is the result.

Rice Bridge about 2½ miles, is by far the best of the places I have mentioned, and good jack, chub, and roach are taken; free on right of the bridge nearest Reigate, and good fishing on the bridge with fly (blow line) under the trees. Permission is also given for the left side of the bridge, and good jack and chub are taken by the waterfall. Over the fence (right side) are some very good roach and chub swims, but almost all are difficult to fish on account of the roots. Jack are plentiful near the Copse, and also rather large. Round the Copse, and close to it, is a good swim for chub, but when caught they are difficult to land on account of the high bank and the bushes. Farther on are some good jack, but the best part of the river is now strictly preserved. Sunday return tickets in the summer months 2s., being only 2d. over single fare. Return four days, 2s. 9d. from any London station of the S E. R —I am, &c., C. T. PADFIELD.

Dalston, E., Nov. 21, 1882.

[Many thanks for this useful information —ED.]

HENS AND FEATHERS.

SIR,—Regarding Andalusian feathers, I never heard of them being used in the North, but having tried some, found them kill well—in fact, better either than poot or hooded crow (both good bloa feathers). They killed the best on wild, cold, wet days; as the fibre of the feather was stronger than the two named, this may explain matters. I see your correspondent "R. A." alludes to blue game feathers. I have a blue cock, and should like to meet with some pullets. I don't know the feather, but generally think the smaller the bird the closer and finer the fibre, and consequently the nearer approach to nature I have dotterel feathers in plenty. As regards blue game, although a fancier, I don't know the feathers—would gladly exchange a few dotterel —I am, &c.,

Bradford. ARNCLIFFE.

FISHING NEAR LEWISHAM.

SIR,—Whilst passing along in a Lewisham train I saw a piece of water. Kindly let me know whether it is fishable, and if so to whom should I apply for permission.—I am, &c., E. R. M.

[The Ravensbourne must be the stream our correspondent refers to; the best part is between the Silk Mills and the waterworks at Deptford, where the stream runs by the side of the road; we believe it is quite free, but there is very little to be caught.—ED.]

THE JACK "INCIDENT."—FISHING PLACES ON THE ALT, &c.

SIR,—Mark Antony seems to be a querulous, discontented being, as his many letters in the FISHING GAZETTE prove, and I feel proud in having astounded him. When he recovers his equilibrium, and will let me know, I will make enquiries from "Jack" himself as to how long that particular roach was in his gullet, and whether he swallowed him head or *tail* first, and his ("Jack's") reply will be a *tale* worthy of "M.A.'s" best attention. Replying to your foot-note, Mr. Editor, I can only repeat what the witnesses, some seven or eight, affirm, "that the roach was swallowed.".

Will "Yorks" kindly look through his own letter and inform me if the passage ending with the words, ' nearest to the corner of this big county where he resides" is not a little, only a little, obscure and mixed up?

If "Cottonopolis" will travel to Hightown, midway between Liverpool and Southport, and there make enquiries of the courteous station-master, he will be put on the right track to fish the Alt. This small river is well stocked with fine roach and graining, jack, and eels. Trout are not plentiful, but I have taken several good sea trout with the worm, two one afternoon weighing exactly 1½ lb. each, and one of over 2 lb. on another occasion, besides others of less weight But these are scarce, and at the best of times the river is very uncertain. It flows through land belonging to the Earl of Sefton, who is very strict (though people say it is the agent, Colonel H. Wyatt), and does not allow a rod on it for fear the game might be disturbed. I know several piscators whose rods have been destroyed by the keepers, and who have been summoned and fined for angling. By the bye, Sir, can the rods be taken in this way, and broken up (legally)? It seems to me most unjust if it is so, as surely the loss of the rod, &c., should be considered in fixing the fine. Our members have permission to fish in the Alt from T. Weld Blundell, Esq., where it runs along his land for two or three miles; but this concession is strictly confined to this association, their tickets having to be shown by the anglers when the keeper comes across them.—I am, &c., RD. WOOLFALL,

Hon. sec. Liverpool Angling Association.

[We do not think a keeper has the right to destroy an angler's rod and tackle. We will look the matter up, and let you know next week.—ED.]

PIKE TAKING A SWALLOW, AND OTHER INCIDENTS.

SIR,—I can fully testify to the statement of Mr. Woolfall that the pike will take birds, as I witnessed exactly the same occurrence while jack fishing a few years since, at Ferry-boat Fishery, Tottenham.

The following occurrences may be interesting to your readers.

Fishing at the same place, and proceeding up the water, on the bank lay a fine eel, I should say at least 3 to 4 lb in weight, with a water-rat half out of its mouth, and both dead, being in a far advanced state of decomposition.

One day, fishing at the same place, I caught a roach with the upper jaw partly gone, and blind one eye: the scales were off one of its sides as if at some time it had been seized by a jack. After handling as tenderly as possible for the purpose of extracting the cold steel, I returned it to the water as an old pensioner deserving of everything that might come within reach, barring the hook.

Sitting down quietly one day at the same place roach fishing, all at once —splash! splash! splash! in the water; looking about, nothing to be seen, nothing to be heard; looking above, a balloon was sailing quietly over me, and had evidently been discharging its sand, much to my annoyance. But I may mention, I had a bad time of it before, but afterwards had one of the finest and best dishes of roach I have ever taken from the Lea.

Jack fishing at the same place, I hooked a jack, and it ran me (that is the line) into a bed of weeds, and all the power I could or possibly dare put upon it failed to remove it. After procuring a boat and rowing to the spot, I managed to take it with the aid of the scull, and brought up with it the perfect skeleton of another jack, with trace, float, and pilot attached.

Fishing at ——, a water rat was swimming leisurely on the surface of the water; all at once a jack seized it and carried it under. All was quiet for a few moments, and evidently Mr. Jack had taken it to his abode, as a few seconds afterwards a scuffle and crying was heard in the sedges on the opposite bank. The cries of the rat I shall never forget, and I have no doubt Mr. Jack was the victor. What do I hear you say, Mr. Editor?—Wonder if I tried to part them? Not I, but I tell you what I did do: quickly put on a nice bright dace and cast it within 12 inches of the spot; but Mr. Jack was evidently satisfied with one course, much to my disgust.

Fishing one day within a few miles of the same place, anxiously watching the movements of my float with live bait attached, a young colt belonging, I presume, to the noble proprietor of the water, took a fancy to my landing net (which was folded and lying on the grass behind me), and stole it. Hearing something, I turned round quickly, and he dropped it; but again he returned some time afterwards and stole it again: this time cost me a trot over a six-acred field, with the result that about a dozen of the meshes were made into one. On this occasion I landed about twelve nice jack, and threw them as caught in a heap on the grass, and after the afternoon's fishing found two locked jaw-in-jaw, dead.

Once, fishing at the same place, I left my bait-can on the bank with the lid open, containing, I should say, about half-a-dozen fine gudgeon, and proceeded about a hundred yards along the bank for the purpose of casting in a jacky spot. Turning round some time afterwards, I saw a wild duck busily engaged devouring the contents of my can. Putting down my rod, I proceeded to the spot, and it did not move until I got within ten yards of the scene, when I saw it had only one leg. This duck stole four gudgeon, and although the jack were on splendidly, I freely forgave it. What must have been the loss of the leg to the duck!

Roach fishing at Bouveney Weir with a 20 ft. light cane roach rod, and sitting behind a bush, a kingfisher settled on the rod and began to plume its beautiful feathers, I holding the rod as steadily as possible; it stayed there for a few seconds until a knock at my float, which I could not resist, compelled it to leave its resting place.—I am, &c., G. CLARK.

Crouch End, N., Nov. 23, 1882.

NORWICH ANGLING CLUB.

PRESENTATION TO THE SECRETARY.

THE annual dinner of the above club was held at the Walnut-tree Shades, Old Post Office Yard, on Tuesday evening. Mr. George Diggens presided, Mr. Wm. Cooper being in the vice-chair. Amongst those present were—Mr. Councillor Matthews, Messrs. G. Daniels, T. E. Gunn, F. Powell, O. Winter, M. J. Bailey, J. D. Beeston, W. Womersley, J. Womersley, D. Belson, H. Flowers, T. Lord, G. C. Whincop, J. L'Estrange, H. Campling, J. Lowe S. F. Howitt, Ellingham, Cox, C. Daniels, W. Burrage, and R. Moll.

The Chairman, in giving the toast of the evening, said, "The Norwich Angling Club," and stated that in future they intended to have an early match for pike, when he hoped they might catch a few more "stuffers." The club was the oldest and premier club of the city, and they would have no difficulty in filling up the two or three vacancies which he apprehended might soon occur. With the toast he coupled the name of Mr. R. Moll, the hon. secretary, in whom they had a most exemplary officer. It would be difficult to speak in too eulogistic terms of the way in which he kept the accounts and made all arrangements, all of which he had at his fingers' ends.

Mr. Moll said after seven years' tenure of office he could say the success of the club was owing to the individual endeavours of the members. He thought they could not find another club where the members could read such interesting papers on various subjects on winter evenings. Shortly, amongst other things, there would be presented an article on the *flora* of the rivers and broads of Norfolk, with illustrations by another member—Mr. Daniel and Mr. Howitt. The register of catches showed them to be equal or beyond those of other clubs, although emulation was not their aim. Year by year they had increased in the amount of prizes and in sport, and the club was the first to introduce a roving match where members were properly trusted. There was a wall of partition among angling clubs, but he hoped when the Yare Preservation Society called a meeting in St. Andrew's Hall for the purpose of doing away with netting altogether (applause), that there would be more fellowship originated among the different clubs.

The Chairman then presented to Mr. Moll a sign of the appreciation of the members in the shape of a gold watch, to which all had contributed, and which the chairman hoped he would always look upon as a token of the brotherly affection and testimony of the value of his services (applause).

Mr. Moll said he appreciated the kindness more than he could say, and if in the future it were possible, he would do more than he had done in the past.

Mr. C. Daniels gave "The Yare Preservation Society," alluding to the great benefits it conferred upon anglers.

Mr. Whincop and Mr. G. Daniels responded, the latter remarking on the need there was for angling clubs to give their adherence to the society.

Mr. R. Moll gave "The Press," which was responded to by the representatives of the *Argus* and *Chronicle*.

"The Visitors," "The Host and Hostess," and "The Ladies," concluded the toast list. During the evening excellent songs were sung, and especial mention must be made of Mr. Beeston, who, bearing the designation of the "club poet," gave an original song entitled, "The Norfolk Fisherman."

THE GRESHAM ANGLING SOCIETY.

TUESDAY last will long be remembered as a red-letter day in the annals of the Gresham, their room at Masons' Hall Tavern being crowded with members and visitors, all anxious to participate in the special business of the evening, S. C. Harding, Esq., having been unanimously voted to the chair, the hon. secretary read the notice convening the meeting, called for the purpose of voting the necessary funds for the purchase of a bookcase to receive the many volumes now forming the library of the society, and afterwards to distribute the prizes offered for the past year. Among the successful competitors were Messrs. Barrett, Barnard, E. Bennett, G. Bennett, Cartwright, Cooper, Chambers, Crumplen, Mc Dowall, Frost, Parker, White, Dr. Defreiz, and Dr. A. C Tucker.

The chairman gracefully handed the prizes to the recipients, who were warmly applauded as they proceeded to the table. It was quite clear the ladies were not forgotten on this occasion, and a very handsome bracelet, chosen by Mr. Parker for Mrs. Parker, gave rise to some witty remarks from the chairman, whose tact and good humour were conspicuous throughout the evening. A brief interval followed, during which angling topics were freely discussed by Dr. Brunton, Mr. Wheeldon, and Mr. Jardine, after which followed the presentation of a testimonial to Mr. Crumplen, the very able and respected hon. sec. of the society. This took the form of a massive jug and two goblets, all in solid silver, the former being a beautiful facsimile of a fine Elizabethan model known as "The Armada," richly frosted and chased, the figures standing out in bold relief, and the whole being the work of the eminent firm of Martin Hall and Co., of Bouverie Street, E.C. Mr. Bates, on rising to present the testimonial, said his only regret was that such a duty had been entrusted to one so unable to perform it as he thought it ought to be performed. (No, no.) He was sure there was not a member of the society that was not proud of their secretary, who was a man of such sterling worth, that they could only present him with the true metal—(hear, hear)—which he was sure he so well deserved. There was one great characteristic about him, and that was his perfect frankness. He said what he meant, and they knew he was in earnest. They could hardly imagine what his labours for them had been, and it was gratifying to know that outside their society he was equally respected, and honours of all kinds, involving much hard work, had been justly showered upon him. Need he remind them that their friend Crumplen was one of their delegates at the West Central Association; a member of committee of the Fisheries Society; of the committee of the Anglers' Benevolent; and last, but not least, that he had the high honour of being selected as one of the two sole representatives of *all* the London angling societies on the special sub-committee relative to freshwater fish, of the Great International Fisheries Exhibition of 1883? Mainly through his exertions, their society had attained its present popularity, and he trusted this small token of respect, which was in no sense a compensation for his priceless services, would long remain to remind him, and his children after him, of the sincere regard they had for his personal worth, and their thorough appreciation of the great services he had unquestionably rendered, not only to their society, but to the whole of the angling world. The testimonial was a spontaneous offering from the Gresham Angling Society, and, as such, he begged Mr. Crumplen to accept it. (Vociferous applause.)

Mr. J. P. Wheeldon desired to endorse every word of what had been so well said by Mr. Bates, and to thank Mr. Crumplen for the useful information he so often and quickly supplied for the use of the Press.

Mr. Crumplen, on rising to respond, received a prolonged ovation of no ordinary character. He said that his first words must necessarily be words of thanks for the magnificent work of art which they had so generously and unexpectedly bestowed upon him. All he could say was, that he endeavoured to do his best for them, and they were under no obligation to him for doing it, because it was his duty, and that duty he hoped always to be able to do. (Applause.) He could not but feel proud to be their secretary, and proud of their society, for whether he went among the humbler anglers of the East-end, or the more cultivated denizens of the west, whether in London or the provinces, he was always welcomed, which he believed arose largely from the fact that theirs was not an exclusive society, but held out the right hand of fellowship to all who had the true principles of sport at heart. At such a moment they must excuse his brevity; he feared his speeches had sometimes been intolerable—(No, no)—but he could say little now. In the past he had doubtless said things he would wish unsaid, and omitted what he should have said; but he knew they would forgive him. In a society like theirs all must work together for a common purpose, and if anything could stimulate a man to work for them it would be not so much in receiving so elegant a testimonial (costly though it was), as in knowing that, however small his services, they were fully appreciated. (Rounds of applause.

Dr. Brunton afterwards moved a vote of thanks to Mr. Bates for the able and satisfactory manner in which he had arranged for the presentation.

Mr. Bates, in reply, stated that he was greatly indebted to the gentlemen who had acted with him, Captain Alfred, Mr. Darling, Mr. Harding, and others, adding that their work had been a labour of love.

Among the visitors were Mr. J. C. Murray, chairman of the Central Association; Mr. S. Morgan, chairman of the East Central Association; Mr. J. A. Fitch, jun; Mr. G. Hockley, and several others.

Mr. Murray, in responding, first for the visitors, expressed his earnest hope that the time was not far distant when the three associations would amalgamate, a remark that was greeted with rounds of applause.

The proceedings were interspersed with harmony, in which Messrs. Harding, Cartwright, Wheeldon, Bendon, Copeland, Parker, and Neville took part; and at the close the Chairman's health was given with full musical honours.

"Auld Lang Syne" and the National Anthem brought this interesting evening to a close.

THE BLACKWATER FISHERIES.

CORK, Nov. 16.

AN important decision affecting the entire fishing interests of the river Blackwater, has been rendered in London. For fourteen years a contest has gone on between the Duke of Devonshire on the one hand, claiming a right to a riveral fishery on the Blackwater from Lismore to the sea, a distance of thirty miles; and the net fishermen, on the other hand, questioning that right, and setting up a prescriptive right themselves to the fishing. The interests involved were very large, affecting the means of existence of some hundreds of hardy fishermen and their families, who have for fifty years been exercising the unfettered privilege of drift net fishing along the splendid reach of water from Cappoquin to Youghal. There have been no less than seven trials arising out of the contention. Two have resulted favourably to the fishermen, who, as champions of the popular rights against a vast monopoly, have been sustained by the public. In two of the actions verdicts were had for the Duke of Devonshire. Three of the cases resulted abortively. There were numerous motions, and at length the main issue came to be determined by the House of Lords. On Tuesday their lordships decided in favour of the Duke of Devonshire, who, relying on old charters granted in the eleventh century to predecessors of His Grace, has secured his title to the entire bed of the river Blackwater, over which the tide ebbs and flows. It is impossible yet to foresee what will be the immediate consequence of this great and valuable acquisition by His Grace. The Duke, who has ever maintained the reputation in this country of a just and liberal landlord, will not be likely to exercise his rights with severity. His process of getting rid of the numerous fishermen will doubtless be gradual. The restriction of the drift-net fishing, which is notoriously excessive in the Blackwater, will first receive attention. That the angling interests will be greatly benefitted by the recent decision is a recognised fact, and probably this is the branch of the subject which will most interest the readers of the FISHING GAZETTE. For some years the Blackwater, as a salmon river, had been going back. It was felt that between the operators of the great weir of His Grace at Lismore, and of the immense number of drift nets on the tidal part of the river below Cappoquin, that no fair proportion of the spring fish was able to reach the upper waters. Efforts were made to have modifications made in the Lismore Weir, which, from its construction, forms a huge trap for salmon, but without success. Attention was also turned to the necessity of restricting the rights of drift fishing; but the question lay in abeyance until the principal issue was decided by the House of Lords. The subject has been now settled, and it would be mere affectation to deny that there is joy among the anglers of the Blackwater, who look forward to halcyon days of sport and enjoyment with the Springers.

ANGLER.

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

FACEACHE, TOOTHACHE, PAINS IN THE GUMS, NEURALGIA. —ADAM SMITH'S NEURALGINE is a Certain Cure. Bottles, 1s. 1½d., 2s. 9d. Post free from Proprietor, Chemist, Wednesbury. London Agent, W. EDWARDS, 157, Queen Victoria Street.

ALFRED YOUNG
"The GOLDEN PERCH,"

JOHN STONE, Secretary.

TROUT and CHAR OVA and FRY
Orders taken at the following low rates:—
OVA, *Salmo Fario*, £1; FRY, 40s.; OVA, *Salmo Fontanilis*, 30s.; FRY, £3 per 1000. Yearling *Salmo Fario*, 40s. per 100.—Address
THOMAS FORD,
Manor Fishery, Caistor, Lincolnshire.

HOTELS, INNS.
ANGLING QUARTERS & WATERS

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplatinng a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Weusley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald
(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

ROACH & BREAM FISHERS

Should try a day's fishing in the 350 acres of water strictly preserved, belonging to

THE WELSH HARP FISHERY

CAPITAL ACCOMMODATION AT WARNER'S.
BOATS, PUNTS, &c.

" Pike, perch, roach, &c., are numerous."—Angler's Diary.

Frequent Trains from all Metropolitan stations to Welsh Harp.

(Book for the Welsh Harp Station.)

FISHING,

FOR PIKE, PERCH, and RUDD.

"The best in the West of England."

VICKERY'S TORCROSS HOTEL, a perfect Fisherman's home, also capital Sea Fishing.
Billiard Table and Posting.
Tariff—Weekly Boarders, £2 5s. 6d., including (table d'-hôte) Breakfast, Lunch, Dinner and attendance.
Bank Fishing Free to Visitors.
Boats at moderate charges.
Nearest Railway Station Dartmouth, Great Western Railway.
Postal and Telegraph, Torcross, near Kingsbridge, South Devon.

Torcross is about 20 miles south of Torquay—the mildest climate in England for winter fishing.

FISHING & SHOOTING SEASON

NO SPORTSMAN should leave for the RIVERS OR MOORS without having his Boots dressed with

STRAWSON'S WATER-PROOF.

Shooting and other Boots dressed with it will resist Dew, Rain, Snow, and Sea Water. It softens and preserves the Leather, makes the Soles of Boots and Shoes thoroughly Water-Proof, and consequently increases their wear and the comfort of the wearer.

Opinion of a well-known Angler—'Your Waterproofing is the best in the world.'
H. CHOLMONDELEY PENNELL.

SOLD IN TINS AT -/2, -/4, -/8, 1/-, 2/-, 5/- & 10/- EACH.

Ask your Boot Maker or Saddler to procure it for you, or send Stamps for a Sample to

JOHN BLAKEY, Sole Proprietor, Lady Lane, LEEDS.

OVA, FRY, and YEARLINGS of the favourite varieties of SALMONIDÆ, including S. Fario (brook trout), S. Fontinalis (American trout), S. Ferox (Great Lake trout), S. Levenensis (Loch Leven trout), Thymallus Vulgaris (grayling), and Hybrids, will be FOR SALE from November to April.—For prices apply to T. Andrews, Westgate House, Guildford.

80,000 Parrots Imported Annually.

A beautiful African Grey, with crimson tail, sent to any address, package included, for 15s. If not satisfactory on receipt, money returned. A host of other stock. Beautiful Singing Canaries, small foreign birds, Pet Monkeys, Tortoises, Peacocks' Feathers, 5000 Parrot Cages, and fresh arrivals daily. The Grey Parrot—the Thirty Guinea Bird—that took the two first prizes at the Surrey Show in 1878 and 1881, was purchased from me a young bird.

Broads and Rivers of Norfolk.

POPULARLY DESCRIBED.

The writer has aimed at giving practical advice to Anglers, Yachtsmen, and lovers of Nature, Science, and Art; pointing out where and how each may find splendid resorts for the pursuit of their several pleasures. The writer records his own experience as far as it has gone, and in all cases the information given can be relied upon. Such a guide has long been wanted, and this issue, it is hoped, will supply the want.

Norwich: P. Soman, *Argus* office, and 84, Fleet Street, E.C. Lowestoft: *Standard* Office. Also may be had of Alfred and Son, Moorgate Street; Little, 15, Fetter Lane; Williams and Co., Great Queen Street, W.C.; Young, 402, Oxford Street, W.; Carter and Sons, 137, St. John's Street Road, E.C.; Allcock, Redditch, and all Bookstalls on the Great Eastern Railway.

ROYAL AQUARIUM.—The JAVANESE GAMELAN.—Selections from the Repertoire of 44 pieces. An exemplification of art, 3000 years old. DAILY, at 2.30, 5.30, 7.30, and 9.30.—Admission ONE SHILLING.

ROYAL AQUARIUM.—The WINTER ELECTRIC EXHIBITION.—Awards £1000. All inquiries to be addressed to Captain Hobson, Manager, Royal Aquarium, Westminster, S.W.; or W. D. Gooch, Esq., Engineer to the Exhibition, 17, Royal Exchange, London, E.C.

ROYAL AQUARIUM.—Open 12 o noon, Close 11.0 p.m.—PROGRAMME for THIS DAY:

Afternoon.		Evening.

STEPHENS'
STAINS FOR WOOD

PREPARATIONS FOR DYEING WOOD IN IMITATION OF OAK, MAHOGANY, ROSEWOOD, SATIN WOOD, WALNUT AND EBONY.

Economical, extremely durable; the Process Cheap, Expeditious and without Smell. Have received the highest awards wherever exhibited—Paris, Havre, Lyons, Amsterdam, Vienna, Philadelphia and Sydney. Gold Medal, Adelaide, 1881.

Prospectuses and Specimens of Stained Deal, free by post on application to

HENRY C. STEPHENS,
91, ALDERSGATE STREET, LONDON.

Important Offer to the Readers of THE FISHING GAZETTE.

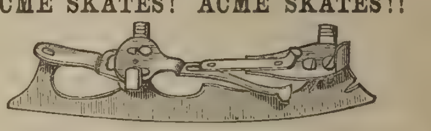
SKATES! SKATES!! SKATES!!!

AT PRICES TO SUIT ALL.

THE extreme mildness of last winter, and the consequent depression in the Skate trade, enabled us early in the spring of the present year to purchase for CASH a Manufacturer's stock, comprising 5000 pairs, at a price never before known in the English markets, and we now offer them to the readers of this journal at an unprecedentedly low price; and, in order to effect an immediate clearance of the entire stock, we have made special arrangements with Messrs Sutton and Co. to send all parcels CARRIAGE PAID. This, we feel sure, will meet with the cordial support of the thousands of readers of the FISHING GAZETTE who have hitherto favoured us with their patronage.

CONDITIONS OF SALE.—As soon as you receive the Skates, if not well satisfied with your bargain, write to us, and we will return you the money.

ACME SKATES! ACME SKATES!!

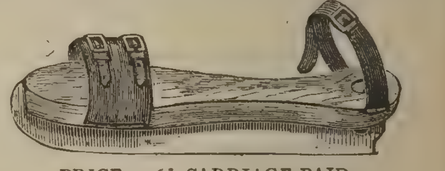


PRICE 5s. 6d., CARRIAGE PAID.
If stamps, 3d. extra.
Sizes—8½ 9, 9½, 10, 10½, 11, and 11½ inches.
All Sizes one Price.

The above pattern is too well known to require either description or comment. We need only say that they are of A1 quality, warranted steel blades, best finish and workmanship, and we guarantee them equal to any Skates usually retailed at half-a-guinea per pair.

Very superior quality ditto, beautifully nickel-plated, price os. 6d. per pair, carriage paid,

Hard Polished Wood, with Broad Toe Strap.



PRICE 3s. 6d. CARRIAGE PAID.
If Stamps, 3d. extra.
Sizes—8, 8½, 9, 9½, 10, 10½, 11, and 11½ inches.
All Sizes one Price.

This is our speciality in Wood Skates, and they are a marvel at the price. Each pair is polished all over, and fitted with two broad toe and heel straps, made of best leather and hand-sewn. The blades are well steeled, and in appearance and wear are unequalled by those costing treble the money.

This pattern can also be had in polished Walnut, with brass toe caps, and fitted with best leather straps. Price 5s. 6d., or 69 stamps, carriage paid.

Hundreds of testimonials from all parts of England, Ireland, Scotland, and the Continent.

As a great rush of orders is expected, early application to ensure immediate delivery will be necessary. Orders will be executed in rotation, and when possible same day as received, and despatched per Sutton and Co., carriage paid. Size of Skates should be ascertained by measuring the full length of boot from toe to heel.

Send for a pair, and if you are not satisfied and amazed, have your money back

Our Illustrated List of Skates and other Specialities will be sent post free on application,

P.O.O.'s payable at the G.P.O., London, to **DRALLIM and OLIVER, 18, Ironmonger Lane, London, E.C., (and at Croydon).** Please mention this Paper.

I TELL YOU, BUY AN A.B.C PIPE
AND DON'T YOU FORGET IT

EVERY MAN WHO SMOKES

should send 24 stamps for Sample Pipe.

No wet Tobacco to smoke through. No filthy oil to enter the mouth. Smoke always sweet and free, and can be instantly cleaned. The most perfect pipes invented since smoking began. 10,000 Testimonials. Illustrated prospectus free. With amber and case, 5s.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of The Fishing Gazette, *No.* 12, *Fetter Lane*, *London*, *E.C.* and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith Unless this rule be adhered to no notice will be taken of such communications.

The Fishing Gazette is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces :—

Messrs. Alfred and Son, Moorgate-street.
Messrs Price and Co., 8, Seymour-street, Euston-square, N.W
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).
Messrs. Little and Co., Fetter-lane, E.C.
Messrs. C. Kewell and Sons, 197, St. John-street-road, E.C.
Messrs. Kewell and Co., 1A, Conduit-street, Regent-street, W.
Mr. J. Richards, 97, Church-street, Paddington.
Mr. W. Leader, 30, Upper Marylebone-street, Portland-place, W
Mr. — Clark, 35, Wells-street, Camberwell.
Mr. Geo. Read, 91, Goldsmith's-row, Hackney-road, E.
Mr. A. Bulmer, 62, Wandsworth-road.

SATURDAY, DECEMBER 2, 1882.

LONDON ANGLING CLUBS AND THE GREAT INTERNATIONAL FISHERIES EXHIBITION.

Anglers generally, and members of angling clubs in particular, will be very glad indeed to hear that all the difficulties, or supposed difficulties, as regards the question of exhibits from London clubs, have been entirely done away with, and it now only rests with the clubs to send exhibits which shall be worthy of the exhibition and reflect credit on the senders.

THE ACCLIMATISATION OF THE SALMONIDÆ AT THE ANTIPODES.

(*Continued from page* 562).

The First Successful Shipment in 1864.

Mr. Youl was now satisfied that "there was nothing to prevent the arrival of living ova in Tasmania if a sufficient stock of ice could be preserved throughout the voyage, and to this point his attention was particularly directed. In January, 1864, just at the most suitable time, Messrs. Money Wigram & Sons offered a space of fifty tons, by measurement, in their fine ship, the 'Norfolk,' declining the hundred guineas which Mr. Youl had offered them on his own account, in discharge of the freight, and wishing this to be their contribution to an undertaking of so much scientific interest and commercial value." The packing of the ova was done in the following manner :—

"I describe it (says Mr. Nicols) from personal observation, having assisted in packing a subsequent consignment with Mr. Youl, by the 'Oberon,' in January, 1873, in which the method was the same as that employed in 1864. The box to contain the ova was of inch pine, measuring about 12 inches by 8 inches, by 5 inches. At the bottom was first spread a layer of charcoal, in small lumps; next a layer of broken ice; then a nest of fresh, carefully-washed, living moss, with the roots attached, and on this springy cushion were distributed the ova from a wide-mouthed bottle half-full of water, and in such a manner as to obviate contact with one another as far as possible. Over them was lightly laid a covering of moss, then a double handful of broken ice, and the whole was saturated with ice water, and screwed down. 181 of these boxes, containing 100,000 salmon and 3000 trout ova (*S. fario*), were packed closely on the floor of the ice-house, and upon them were piled cubical blocks of ice, to the height of 9 feet. Nothing could prevent the wasting of the ice, but the ova would get the benefit of it as long as it lasted. They would rest as securely as might be on their mossy bed, the charcoal would absorb the gases of decomposition, and the living moss would probably give out some little oxygen for their benefit. Mr. W. Ramsbottom took charge of the consignment; the vessel sailed on the 21st of January, 1864, and arrived at Melbourne on the 15th of April, where the ice-house was first opened, and, to the intense satisfaction of all concerned, three-fourths of the ice was intact, and a very large proportion of the ova in a box tested found to be in splendid condition."

Mr. Youl had thus solved the problem of how to send ova alive such an immense distance, and across the tropics. On the 4th of May, 1864, the first trout emerged from the egg, and on the following day the first salmon which had ever yet swum in the southern hemisphere, and by May 25 there were two hundred healthy young trout, and by June 8 several thousands of salmon sporting in their new home, enjoying their rations of boiled liver morning and evening, and affording a living testimony to the perseverance and scientific foresight of one who had laboured for ten years single-handed at a problem in acclimatisation, which both scientific and practical men had often declared to be insoluble.

The ova were hatched in the rearing ponds prepared for them on the river Derwent, in Tasmania. Mr. Youl had advised that the trout should not be put into the same stream as the salmon, but by some neglect they did escape into the Derwent, and they have done so well that "the river now contains thousands of heavy trout." Fish of 9 lb. weight were caught within four years of the importation. Mr. W. Senior ("Red-spinner.") in his charming work, "Trout and Travel at the Antipodes," gives most interesting accounts of his trout-fishing in the Derwent and other streams. He refers also to the "vexed question" as to what has become of the salmon which were put in at the same time as the trout? The trout are, as he says, there to speak for themselves, but it is by no means clear that the solitary specimens of salmon said to have been caught were really other than trout. Mr. Youl tells us that he was passing a fishmonger's shop in London the other day, with a friend who had caught these disputed "salmon," and his friend, who had not seen English salmon before, at once said that the fish he had caught and the fish on the slab were identical in appearance. Mr. Francis Francis, in reviewing Mr. Nicol's work in the *Field*, thus refers to the matter:

"We wish that we could speak with as much certainty of the success of the acclimatisation of the salmon. We have no doubt in our own minds that the salmon have been acclimatised, but much of the head waters of the Derwent are so wild, unfishable, and almost impracticable, that it is difficult to judge of what may be in them; added to this, there are many difficulties in the identification of species. In the first place, there was a crusade against the smolts, and when they do catch even a larger fish, the fishermen keep it to themselves, pretty much as Mr. Nicols puts it :

"'They have all along endeavoured to destroy evidence of the success of the attempt to acclimatise the salmon, because they were put under some restrictions against scraping the river at all times and seasons with their nets. They could not apparently give up for a few days in the year their systematic efforts to exterminate the native fish, in order that they might one day have a far greater source of profit in the salmon, and a little judicious bribery revealed an organised system of murder of all strangers found in the river.'

"In fact, the smolts were cleared off wholesale in their descent, and everything else carefully slaughtered in secret. In the face of such a revelation, it would be, no doubt, not only difficult to ascertain whether the salmon were acclimatised, but to acclimatise them at all. A well-stocked river could not stand against an animus like this. It seems, however, fairly clear, though not absolutely proven on indisputable scientific testimony, that salmon have been caught by anglers, though even here the sea-trout theory has a disturbing influence. We know that ova from the sea-trout, or bouge as it is called, of the Itchen, was taken and sent to Tasmania, because we ourselves obtained leave to take it, and instructed the person who was sent for it; and these sea-trout or bouge often run to 20 lb. in weight. It is most unfortunate that the question is not more definitely settled."

HONOUR TO WHOM HONOUR IS DUE.

Our readers will have seen that whatever may be the case as regards the salmon, the trout ova which were sent out by Mr. Youl in the "Norfolk" have undoubtedly stocked Tasmania and New Zealand "with the best fish they possess." In November, 1879 we published an account sent us by one of our subscribers, Mr' E. S. Cawthorn, describing his fishing in the Derwent. The following extract will come in well here. He says:—

"It is now sixteen years since the young salmon, salmon-trout, and trout were turned out of the ponds into the rivers, and we have been catching the trout for about seven years. There have been several salmon taken in the salt water by nets when fishing for other fish, and I believe some have been caught by rod and line about New Norfolk, and at and near the mouth of the Plenty. I have killed a few myself, which I have every reason to think were salmon, but as I am a native of Tasmania, of course I cannot speak with that certainty that those who have been in the habit of catching salmon in England can do, but I can only say they were quite different in appearance from the trout. The largest trout caught in 1876 was 16 lb., in 1878 20¼ lb.; in this year (1879) two of 20 lb. each; and my brother caught one this year 11 lb., and several 5 lb., 6 lb., and 7 lb. each."

From a subsequent letter, enclosing a list of his fishing that season, we find that Mr. C.'s average for twenty-four hours' fishing—distributed over several evenings—is about thirty trout, weighing 70 lb., and English anglers say the fish are superior in flavour to English trout.

Such accounts as this might be multiplied to any extent, and prove conclusively what a grand success the introduction of trout into Tasmania and New Zealand has been. Now, to whom is due the honour of this success? Mr. Nicol answers this conclusively. In writing of the shipment per "Norfolk," he says:

"Almost at the last moment Messrs. Francis Francis and Frank Buckland sent 3000 trout ova to the docks. Admiral Keppel requested Mr. Buckland to collect some ova from his preserves on the Itchen (he collected 1000) and forward them as a present to Mr. Youl. Mr. Francis Francis also sent two lots, one from Mr. Spicer's mill at Alton, on the Wey, and another from Mr. Thurlow's mill at High Wycombe, Bucks (2000 in number), which were packed by Mr. Youl in the same way as the salmon ova. But, though this valuable present has stocked the Tasmanian and New Zealand streams, the official reports make no recognition of it; while praise and thanks were bestowed upon some who, however well they did their duty, were paid for their services. But for the energy of these gentlemen in collecting the trout ova at a time when it must have been no easy task, there would have heen no trout at this moment in the Antipodes, for no subsequent shipment of trout ova has been successful."

Mr. Nicol very fairly adds: "The whole cost of the 'Norfolk' shipment was about £700, and the colonists cannot consider that a high price for the result—two thousand salmon and an unlimited stock of tront, to which must be added the breeding ponds in Tasmania. Each of the colonial legislatures has done Mr. Youl the justice at least to record its sense of the value of his services." It is a pity they did not also thank Mr. Francis Francis and Mr. Frank Buckland for their part in the work. We need not follow Mr. Nicol further in his interesting accounts of subsequent shipments of ova from this country by Mr. Youl, Mr. Frank Buckland, and Mr. Charles C. Capel. Mr. Capel sent 1500 trout ova in 1878 to Wallace Town, New Zealand, and as they arrived in excellent condition, it is only fair to that gentleman to mention the fact that his part of the work was done, and evidently well done, when the ova arrived at their destination.

We must thank Mr. Nicol heartily for this most valuable history of the great work done by his friend Mr. Youl and the other gentlemen whose names we have mentioned.

As an appendix to this account of the "Acclimatisation of the Salmonidæ at the Antipodes," we give the following extracts from papers which Mr. Wilkie, of Dunedin, has been kind enough to send us. The first is from the

"REPORT OF THE ACCLIMATISATION SOCIETY FOR THE YEAR ENDING DECEMBER 31, 1881."
W. Arthur, Hon. Sec.

English Salmon.—During the year there have been the usual reports of specimens of the *Salmo salar* having been seen and taken, but as none were examined by any expert, the "council cannot state that there is yet positive proof of the success of this valuable fish in our waters." The Otago Society had joined the Marlborough Society in getting over 100,000 salmon ova from England, but they were all dead on arrival.

American Salmon.—"Neither can we find any proof of the success of the Californian salmon (*Salmo quinnat*) liberated in 1877." *

Sea-Trout.—Many of these fish have been captured in Otago Harbour; it is said the fishermen live on them; little can be done to protect them until the law is altered.

Brown Trout.—These fish continue to increase in number and size in some of the New Zealand streams; in others there is a reported falling off this year. Fish up to 25 lb. have been caught. The number of trout ova collected by Mr. Deans, the society's manager in this department, amounted to about 72,000.

The ova of trout distributed by the Otago Society were for the year 1881—to the Auckland Society, 15,000; Marlborough Society, 15,000; Wanganui Society, 6,000; to A. M. Johnston (Opawa), 2000; Mr. Geo. Denton, Wellington, 500. These all arrived at their destinations in good condition, making a total of 38,500 trout eggs safely transported distances of from 200 to 900 miles. They were packed between layers of moss in small boxes, and a supply of ice added for the longest of the passages.

The operations at the Opoho ponds, from the taking to the hatching out of the ova, may be summarised thus: Ova from Water of Leith, box 16, impregnated July 12th; eyes visible August 23rd, or in 42 days; hatched out September 27th, in 77 days. Box 11, ova impregnated July 18th; eyes visible August 27th, or in 40 days; hatched October 1st, or in 75 days. Boxes 9 and 13, impregnated August 17th; hatched out on October 26th, or in 64 days. The temperature of the water in the boxes ranged from 41° Fahr. to 53° during above hatching; and from October 20th to November 15th, the highest temperature to which the young trout were exposed did not exceed 52½°.

The young trout turned out for the year were altogether 43,245. These were made up of the last of the 1880 hatching and the first of that of 1881.

Perch.—Of perch 480 were distributed during the year.

Carp.—Of these fish 6 were sent to Mr. Alfred Bell, Waihemo.

It will be seen that this flourishing society is doing a great work. We wish it every success.

NOTES ON PIKE FISHING.

By "Saxon."

When I first began to fish for pike—now, alas! more years ago than I care to count—I was under the impression that such a voracious monster as friend Esox was described to be in all the accounts I had read of him, would require but little humouring to bring him to bag.

Surely, thought I, a lively dace was a better lure than a donkey's nose, a swan's head, a boy's leg, a dog's tail, or even a many-bladed pocket-knife, all of which in fishing stories have served to make a *bonne bouche* for our omnivorous friend, and at first I must admit that my credulity had to receive many a rude shock before I found out my mistake in supposing that anything in motion would do for a pike bait.

For several years I have lived within a couple of miles of what ought to be a first-rate pike stream.

"Happy man!" I hear some of my readers exclaim; but I am not therefore happy by any means. The river in question contains some very decent pike, I am willing to admit; but it is so abominably poached, that the rod fisher has but little chance of any extraordinary sport.

The *modus operandi* of this poaching fraternity is simplicity itself. On any pikey day during the winter months, an innocent-looking rustic may possibly be seen, with a milk-can or ordinary garden water-pot containing a dozen or so moribund roach, wending his way to the river. In his pocket are eight or nine liggers, not of the ordinary floating kind, but mere wooden stakes or pegs, with some stout cord wound thereon, a perforated bullet to anchor the bait, and an ordinary bottle cork to keep the fish off the bottom.

One of these lines he throws into a hole, sticks his peg in the edge of the river, and leaves it to its own devices. A little further on he repeats the dose, and so on, until all his lines are out. On the expiration of an hour or so, he takes his lines up. The fish, if there are any, are hauled out pretty well by main force, and the lines shifted to fresh ground.

There are two or three spots where the over-fastidiousness of the riparian occupiers puts some slight check on this style of fishing, but the rascals manage easily enough to set their lines after dusk in the afternoon, and take them up very early the next morning before the farmer is stirring.

---

* At the request of the Auckland Acclimatisation Society, Professor Spencer Baird and Mr. Livingstone Stone despatched some hundreds of thousands of ova of *Salmo quinnat* to New Zealand in 1877; the ova arrived in excellent condition.—Ed. F. G.

There is not much artifice about fishing in this style. The line is stout enough to dry clothes on, and the hooks, wire-snooded generally, but sometimes on coarse gimp, would hold a shark almost, but yet—and now comes the curious part of the business—these men catch half-a-dozen pike at least for every one caught by fair fishing with the rod, and the best fish are taken by them. I confess this is a hard nut to crack, but it is strictly true.

Still, I get my share of the sport, although it is not such a large one as it ought to be; but I console myself with the idea that it might be even smaller than it is.

Some time ago I was induced to try traces made of twisted gut for spinning and live snap fishing—personally, I fish for pike in no other way—and I have found them far preferable to gimp. They last longer and are less visible in the water. Lengths of twisted gut can be bought easily and cheaply, and the fisherman should always be able to make his own traces. This is advisable on the score of economy, as well as convenience. You can make them of any length that may be required, and put on as many or as few swivels as you please.

Where gut traces are used, it will be necessary to have a few inches of gimp in the neighbourhood of Mr. Pike's teeth, which are apt to make short work of gut.

In my opinion, people are not nearly particular enough in adapting the tackle for snap fishing to the size of the bait. The hanging triangle should be well clear of the belly of the fish, and a tackle that would suit a dace of medium size would be far too short for a roach of the same length.

Indeed, the further down the pike's throat this triangle is at the moment of striking, the more likely is it to catch hold in the tongue or the softer parts of the mouth.

One trial will convince the sceptic of the truth of this. When I first began to snap-fish, I put the small single hook on much too close to the triangle, and, in consequence, I lost many fish. This, coupled with the fact that I hooked a good many only slightly in the edge of the lips and lost them after a run or two, set me thinking, and I made the necessary alteration, and, moreover, I had every reason to be satisfied with the result of my experiment.

With this pendent triangle some care is necessary in throwing out the bait, or the hooks will become entangled; but this is all the better for the liveliness of the bait, for the more gently you deal with it, the longer it will live on the hook.

I have tried hooks of many different shapes, and my experience is that those known as "sneck-bend" are far superior to all others. They not only take a better hold than the other shapes, but they appear to keep their hold much more surely. I should be glad to hear what other fishermen have to say on this subject.

It is not always easy, in the country especially, to procure dace for bait in the winter time. Roach, however, can generally be had, and these make a better bait than most people suppose. As a rule, they live longer on the hook than dace, they make quite as much show in the water, and really, after having repeatedly tried both in the same water and on the same day, I am hardly able to say which the pike preferred.

It is but fair to add that our river contains a large number of both roach and dace, and therefore the pike, when foraging for themselves, would be likely to take the first that offered. If river roach cannot be had, those caught in a pond will do; indeed, many people who have tried them both aver that pond-roach are superior to any other bait. I know I am travelling out of the orthodox road in what I have just stated about roach being equal, or even superior, to dace as a bait, but I speak from experience.

With the ordinary three-triangle, or with any modification of the Pennell flight, the roach is hardly a success as a spinning bait; but a flight must be made to suit his peculiar shape.

Two triangles with a fixed lip-hook will make an admirable flight for roach. The gimp loop may be passed through the gills of the bait, and the lip-hook pulled through likewise, and then hooked through both lips. The first triangle (which may be larger than that at the end of the flight) can be hooked firmly at the tail-end of the back fin, thus giving a spoon-like curve to the body of the bait. The second triangle stands out clear just beyond the tail. This second triangle is very useful, for oftentimes a pike will run short, or the fisherman spinning by hand on the bank unconsciously draws the bait away at a critical moment, so that Mr. Esox misses his aim. In cases like these it is possible, nay, it is extremely probable, that the triangle clear of the bait's tail will come into play. If the bait is somewhat larger than usual, it may be found convenient to hook the top triangle firmly into the shoulder, and give the crook to the body with the tail triangle.

It must be confessed that a roach seldom, if ever, spins so evenly as a dace or bleak; but I am of opinion that pike like a little wobbling. Look how a spoon bait wobbles, and yet most people will admit that, as an artificial bait, the spoon has not yet been beaten. And now a word about striking. Many fishermen strike but once when a pike has taken their bait. If you attempt to argue the point with them they will tell you that the first stroke fixes the hook or hooks, while any more are likely to pull them away from their hold. Of course, it is quite possible to pull the hooks free, but I feel sure, from my own experience in the matter, that when this is done, the hold must necessarily be very slight indeed, and that the fish would be sure to shake himself free before he could be landed.

It is extremely difficult to lay down a hard and fast rule as to the "when" of striking—experience and practice alone will teach this; but in my opinion the "how" is very easily described. Strike hard, and not merely once, but two, three, or even more times, until a kind of sawing struggle is felt on the line. To do this, you must have every confidence in your tackle, which, as far as flights and traces are concerned, should be new—that is, fresh each season.

Three or four shillings will go a long way in purchasing raw material, and every fisherman worthy the name should be able to make his own flights and traces. I generally make mine on wet days during the summer months; this gives the varnish on the lapping plenty of time to get properly dry before the tackle is wanted.

Shellac dissolved in spirits of wine with a lump of gum benjamin makes a capital varnish, and if corked up tight, it will keep good for any length of time. The stiff feathers from a partridge's wing make excellent brushes, and I always keep a bundle of them among my stores in my tackle box.

It is not easy to say where in a stream pike are most likely to be found. The safest plan is to fish all the water carefully, taking the shallow parts of the water as well as those that are deeper. Pike have their favourite haunts, and these vary much in different streams. There are spots in our river which I always fish, and where I never yet had a run.

Although I have for some years made a careful note of the wind, water, and weather every time I have been out, I am quite unable to give any rule on this subject that shall be more than general.

A good breeze is an advantage, certainly, and in our river the clearer the water the better are the chances of sport.

Pike are very capricious about biting. Sometimes they are well on the feed, while at others, under apparently just the same conditions of weather and water, one may fish the whole day and not have a run.

For a man of robust constitution, I know of few things more exhilarating than a cold, breezy day in winter time spinning from the bank; and if you wish to have some real sport as well as an anxious quarter of an hour, leave your landing net at home, and hook a lively ten-pounder where there are plenty of weeds, and the banks not convenient for bringing your fish to grass.

PHOTOGRAPH OF THE ANGLERS WHO FORMED THE DEPUTATION IN THE LORD MAYOR'S SHOW.

MR. C. HATFIELD, of 33, St. Martin's Lane, to whom belongs the honour of having organized the deputation, has sent us a very capital photograph of the anglers who carried the banner displaying the words "The Corporation and the Rights of Thames Anglers." Mr. Hatfield proposes to sell some copies of this photograph, in three sizes, *i.e.* cabinet-size, 1s., carte-de-visite, 6d.; and in large size, 11 inches by 9, price 3s. 6d. The money thus obtained will be given to the Anglers' Benevolent Society, and we are glad to hear many have been sold. Mr. Hatfield is also collecting an amount which will enable him to present a small silver medal to each of the anglers who formed the deputation, viz.: Mr. J. Clarke, Mr. Deacon, Mr, J. A. Fitch, Mr. J. K. Fitch, Mr. F. Inker, Mr. W. Parkin, Mr. C. Watling, Jun., and Mr. T. Wright. We understand that Mr. T. Crumplen has given half-a-guinea, Mr. Bates a guinea, and other subscriptions are promised. There is no doubt whatever that this demonstration was most valuable, both as advertising the matter largely, and identifying the City with the movement.

I ENJOY a good jouk or argyment, but I doun't think thet swearin' improves the flaver. I doun't think metch uv a men oo uses sitch words ez "bloomin'," "s'help me," leavin' aloun wuss. Darns in stockins is signs uv 'onist en' unobjekshinable poverty, but in conversyshin they shou a poverty of lengwidge.—*The Kaukneigh Awlminek.*

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

THAMES FISHING.—ROACH AND CHUB.

By "Creel."

Anglers should be on the alert and quite prepared, as soon as the flood subsides, and a little colour is left in the water, to take better weights of roach and chub than any the season has yet afforded. The rush of water will have well cleansed the river, all weeds and vegetable *débris* will have been removed, by the scouring of the bottom of the stream, the golden gravel or silver sand will again court the tempting bait to trip over the pebbly pavement, and the fish, for lack of their autumn salad, will eagerly accept most baits of a tasty nature. The fisherman must not be dispirited by cold weather; if his fingers are sufficiently warm and supple, the expectation of sport will keep him in a healthy glow of excitement, and with every fish he secures, he will breathe more freely the health-giving ozone Nature so unstintingly supplies him. But let him go about his work in a scientific and methodical manner. There is nothing gained by putting his rod together as he crosses the meadows—indeed, he may find he has lost a middle or top joint in the heedless haste of preparation. If this occur, let him retrace his steps—the track he had taken ought to be easily distinguished, particularly if the grass is dewy or a hoar frost prevails. And when he arrives at the banks of the stream, he may then open his rod bag, and adjust the rod and line, taking his plummet, which ought always to be found in one particular pocket, and with this try the depth within reach, say, for fifty yards up and down both ways, or altogether a range of one hundred yards, in which distance the probability is he will find a suitable swim, which ought to be from five to six feet deep, if the water is not much coloured; but if opaque, four, or even three, feet will suffice. To assure himself of the character of the bottom he should provide himself with a piece of mutton fat, and attach it to the plummet, with which he will bring up a sample of the deposit; if of mud, he should try another place until he finds gravel or sand. An even bottom consistent with the length of the line he permits to travel is indispensable; but if a gentle rise takes place at the end of the swim, not only will this arrest the ground bait from being carried too far down by the stream, but permit of the bait lodging for a time upon it in a natural and therefore a deceptive manner.

Don't let the amateur accept the notion that the roach is a silly fish, easily to be lured at the will of the angler. This may apply to small roach not worth the room in your basket, and which have not learned to hold their scales on; but roach above a quarter of a pound and upwards are as 'cute as Yankees or as cunning as Yorkshiremen. You have only to watch these patriachs amidst a shoal of comparative fry, and see how meditatively they look at the bait—how quietly they sail by it, and with a knowing cock-o'-the-eye, they give it a fillip with their tail in passing, often rewarded, if the bait is paste, by its disengagement from the hook, and then the intelligence of Mr. Roach is most conspicuous, for the released pellet is then acted upon without artificial restriction of hair or gut, and is down the throat of the clever Cyprinus rutilus, to the astonishment of his juniors, who, if they are left to live long enough, will most assuredly profit by so practical a lesson. Besides this fact, the bite of the adult roach in no one particular resembles that of the spratty fraternity. The latter dashes at the hook, carries the float over with a rush, and if the fish is not hooked, the inexperienced angler declares it must have been a "good un," by the eager way the bait was seized. Whereas the roach of a more sober and staid character approaches the bait (I am speaking of paste) with a calm and almost aristocratic dignity, and, satisfied of its bona fides, draws it in, with a quantity of water, with one inspiration which has but the slightest indication on the float, and then finding something adhering to it—the line, it, by an immediate expiration, expels it from the dangerous cavity of its mouth. Now I have had many an evening with some of the best roach fishers, and this plan of roach fishing has been discussed, the result of which was to convince me that there were a duality of tell-tales indicated by the float, although the first is by some fishers let pass unresponded to. In other words, the inspiration scarcely drew the shot on the line out of the perpendicular, and consequently did not affect the float; so the fisher waited for a second call upon "the turn of his wrist," and that took place when the shots were affected, and the bait was no longer in the fish's mouth.

There is one great error often, I consider, committed by quasi roach fishers—that is the overloading the line with shot and the use of a heavy float. The best float, in my opinion—and as it does not possess any attractions for the "butterfly fishermen," and nothing to afright by gaudy or meretricious colour, is not a general favourite—is simply the quill of a swan, with an inch or so of the feather end left for a ring to be whipped upon. This is used upon the Trent, and now, after most determined obstinacy on the part of the ancient fisherman, its use, together with the Nottingham reel, and fishing fine and far off is becoming the practice. This float does not require a cap, two half-hitches of the line preventing all slipping, and thus far again getting rid of colour, which, in my early novitiate cheated many a foolish whippy, jelly-backed jack to prefer my float to the bait below it.

Creel.

(*To be Continued.*)

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

FROM THE LAND OF "LORNA DOONE."

Two lovely, lively, clearest of streams flow, or rather dance and run, through the woods and meadows near my house; lively, handsome trout abound in them, but they are a cute, sharp-sighted race, and have a strong objection to the intrusion of the human family, and a stronger one to being dangled at the end of a long line into the air. Readers of Izaac Walton, lovers of nature, would be sportsmen, and the practised angler are all to be met with on the banks of the rivers on many days from the 1st of March until the end of August, and amusing, exciting, and interesting are the various tales poured into the sympathetic ears of a listener. As a public individual, I am frequently applied to with the enquiry, "Is yours really good trout fishing?" Knowing as I do that unpolluted streams running direct from the mountain source, through miles of moorland, then passing a small village, next dividing miles of woodland before arriving at another village, must of necessity contain trout in abundance, my reply is always "Yes." But I am afraid that many unsuccessful fishers do not bless me when going away again. My assurance that I can nearly always depend on catching trout is not always believed, and yet such is the case. But it is a hard matter to make would-be anglers understand in what point they fail—they first blame the flies, then the weather, next the water; seldom themselves. They are generally out too soon or too late, or they lunched just at the taking time, or the fish are not at all on the feed. Probably they will only take the worm, or possibly the minnow. One unfortunate has tried everything, and finishes with the complaint that there are no fish in the water. Another says it is too early in the season or too late, the sun is too bright, the banks are too wooded, or too many rods are on the water. Perhaps the March brown is on, then everyone knows that nothing is to be done; or it is an east wind, or the fish are expecting rain. Another says his cast is too coarse, or his line is too heavy, or he had no waders, or was very unlucky, or some one had tried all the pools in front. One arrives having broken his rod, another having lost his book of tackle, and, worst of all, one has fallen into the water, and borrows my spare suit while his own is drying. One brings a small dish of eight fair fish, and paternally advises his brother anglers to always fish up-stream, as nothing is to be done in any other way. One brings six, and has only just missed a two-pounder, all from a special fancy fly of his own. The practised and (generally) native angler arrives last, bringing five-and thirty takeable fish (which are a most handsome dish), quietly laughing in his sleeve at the theory of exclusive up-stream fishing. On one occasion, two anglers, staying at the same hotel, brought in daily respectively from eight to twelve and the other thirty to thirty-five trout. The former could not understand the reason of the difference in the bag, and determined to devote one day to accompanying his friend. On their return he was pleased to say that everything was done fairly, and all the fish were caught with the fly in a sportsman-like manner. The method of his friend was to start early, to fish none but the best spots, which a long experience of fishing revealed to him, to try them skilfully and carefully, to waste no time in going from one spot to another, and to fish assiduously the whole day; and, although it was low water, with a bright sun and a sharp east wind, the average of thirty was upheld. Many beginners wish to know the royal road to fishing well: there is no such road—the lane of patience, the hill of perseverance, and the gateway of experience have in turn to be plodded, climbed, and groped to make the successful fly-fisher, and, even then, natural aptitude serves an excellent turn.

C. W. N.

NORTH-WESTERN ANGLING CLUB.

The 31st half-yearly supper of the above took place on Thursday, 23rd inst., Mr. W. Aldis ably fulfilling the office of chairman, and Mr. R. Marshall in a like manner the vice, Mr. Ernest Symons presiding at the piano. As usual on such occasions with us, it was a complete success. Our most worthy host and treasurer placed upon the tables a most sumptuous repast, to which fair justice was done by both members and friends. Amongst the visitors present were Mr. Packman, sen. (hon. sec. Waltonian Angling Club), Mr. C. P. Wheatstone and Mr. W. Jarvis (Stanley Anglers), and Mr. J. Jennings (hon. sec. Bostonian Angling Club), and letters of regret at not being able to be present were read from Messrs. P. Geen, T. Hoole, R. B. Marston, Revill, and Sawyer, upon which Mr. Hill proposed a vote of condolence with Mr. Hoole in his sad illness, and called upon those present to drink to his speedy recovery, which was done.

Upon the cloth being cleared, the chairman proposed the usual royal toasts, which were drank, and upon being called upon by the vice to commence the harmony of the evening, gave "Jack's Yarn," being followed by the vice with "The Temperance Band," both songs being well received.

The chairman then called upon Mr. Kelsey, who sang "The Powder Monkey" in his usual good style. Mr. Stead followed with "Be Happy While You Can, Boys," and received that ovation which Mr. Stead always receives whenever he rises for such purposes. The chairman then proposed "The West Central and Kindred Associations," coupled with the name of Mr. Packman, jun. In the mean time, while Mr. Packman was recovering his scattered thoughts, Mr. Dawes, a visitor from the Haverstock Cycling Club, gave "Our Boys Down at Westminster," and received great applause. Mr. Packman, replying to the toast of the association, in a few chosen remarks mentioned the amount of good work that was being carried out, and further said he could not conclude without first calling the attention of those present to the late sad bereavement that had fallen to Mr. Geen, and also the present illness of Mr. Hoole, but trusted before long to see them both back at their respective posts, as two harder-working gentlemen, in his mind, in the course of angling it was not possible to find. Mr. J. Harding, being then called upon for a song, sang the "Gay Cavalier," and an encore being called for, gave "Let Me Like a Soldier Fall," both songs being cheered lustily.

The chairman then proposed the toast of the evening, "The North-Western Angling Club," coupled with the name of Mr. Hill, the secretary, which was drunk with musical honours. Mr. Shackell then gave "Blue-eyed Nelly," and which received a very deserving reception. Mr. Hill followed, thanking the members and friends present for the very kind manner in which they had received his name, and further said it was gratifying to him to know, by the style in which the members had expressed themselves this evening, they were satisfied at the manner in which he carried out his duties as their secretary, and trusted, as long as he held the office, to continue to do so. *Re* the club business, the aggregate weight of fish weighed-in during the five months being 616 lb., made up by 28 members, calling upon those who had not assisted to make an effort during the present half year, and so hold good their names as worthy members. In reference to the financial part, he was happy to inform the members they were prospering, having commenced the half-year with £21 19s. 5d. in hand, and would finish with £27 6s. 6d., showing an increase of £5 7s. 1d., which was received with cheers. In a few concluding remarks, he called upon the members present to give him that assistance necessary to ensure success to the club by attending the meetings as often as laid in their power, and he would assure them nothing should be wanting on his part for the club to continue in the path that they had once more struck. Again thanking the members for the very kind and encouraging manner in which they had received his name, amidst cheers he resumed his seat.

The vice-chairman then proposed the health of our worthy host and treasurer, which was drank with honours, being followed by Mr. Bonvoisin presenting the prizes in his usual humourous manner, giving a word of encouragement to each as they stepped to the front, Mr. Shackell taking a very elaborate cruet, presented by Mr. Revill, of the Upper Welsh Harp, for the heaviest jack; Mr. Marshall, for the gross weight of jack in July, 10s. 6d., presented by Mr. Plumpton, jun.; Mr. North, two spinning prizes of 10s. 6d. each, by Messrs. Hatch and R. Clarke respectively; Mr. Grindley, for the heaviest jack, 1st Sunday, 10s. 6d., by Mr. Hill; Mr. Bonvoisin, gross weight of roach, pair of boots, presented by Mr. Kelsey; Mr. Marshall, ditto, 10s. 6d., by Mr. Billings; Mr. Hill, 10s. 6d., by Mr. Holmes; Mr. Hillier, pair of boots, by Mr. Gainsford; and Mr. Wynn, 10s. 6d., by Mr. Hillier. The gross weight all-fish prizes presented was as follows:—Mr. Aldis, pair of pictures, presented by Mr. Pearse; Mr. Weaver, portraits, by Messrs. Taylor and Jennings, of the Bostonian Angling Club; Mr. Underwood, pair of opera-glasses, by Mr. Shackell; Mr. Hayes, jack rod, by Mr. M. Lemon; Mr. Harris, 10s. 6d., by Mr. G. Lemon; Mr. L. Roxbee, 10s. 6d., by Mr. Lealand; Mr. Foreman, 10s. 6d., by Mr. Harding; Mr. Billings, 10s. 6d., by Mr. Harris; Mr. G. Lemon, 10s. 6d, by Mr. Culpitt; and Mr. Wynn, 21s., by Mr. Gannoway; Mr. Stead, for the heaviest perch, portraits presented by Mr. Mayman. Our late respected member, Mr. Smart, also won two prizes, gross weight all-fish, 21s., presented by our treasurer, Mr. Wetenhall, and 10s. 6d. worth of tackle, presented by Mr. Price—both of these will be handed to his aged mother.

Mr. Bonvoisin then made an appeal to the generous minds of those present for prizes for the present half year, heading the list with 21s. in his own name, being followed by Messrs. Packman, sen., Wheatstone, Jarvis, and about forty other members and friends; in all, value to the amount of £30 being given. Mr. Halse followed with "The Anchor's Weighed," which was met with applause, the amount of business, &c., to be got through not allowing of time for an encore, which was called for. Mr. Wetenhall, making his appearence in the room, replied in a short, well-chosen speech, thanking the members for the very kind manner in which they had received his name, remarking for thirty consecutive half-years he had had the honour of giving away the prizes in that room (cheers), but regretted, on account of a domestic affliction, he was compelled to forego the same upon this occasion. The chairman then proposed "The Visitors," coupled with the names of Messrs. Packman, sen., Jarvis, Wheatstone, and Jennings, being followed by Mr. Stead singing "I am Jolly well Drunk," which was received with applause. The visitors having briefly responded, and as time was drawing to a close, the chairman proposed "The Press," coupled with the name of Mr. Widdicombe of the *Camden and Kentish Town Gazette*. Mr. Widdicombe replied, and said he always felt an additional amount of pleasure in attending the North-West suppers, and he had done it now for fourteen consecutive half-years. (Cheers.) Mr. J. Harding then proposed "The Chairman and Vice-Chairman," with Mr. Bonvoisin's name added. All three gentlemen having briefly responded, a most enjoyable evening was brought to a close with "Auld Lang Syne." H.

LIVERPOOL ANGLING ASSOCIATION.

THE members of this association celebrated their third annual reunion by dining together on the 16th Nov. at the Strawberry Hotel, West Derby Road (their present quarters). A good substantial English dinner by Mr. W. Jones—host and treasurer—was provided, and about forty sat down to enjoy it. The table was neatly and elegantly set out, and reflected the greatest credit on Messrs. F. Schmidt and H. Wood, under whose hands the room was made quite attractive, and looked as if a fairy's wand had touched it. After a hearty meal the table was cleared, the company reassembled, and, with Mr. Pratchett in the chair and Mr. W. Pearson opposite, prepared to enjoy a pleasant hour or two. After the punch and tobacco had been set going, the loyal toast of "The Queen and Royal Family," was given, and suitably received. Then followed that of "The Army, Navy, and Volunteers," Captain Hoblyn eloquently responding. "The Liverpool Angling Association," came next, coupled with the name of the chairman (Mr. Pratchett), who, in reply, made one of his terse, to-the-point speeches, assuring those present of his continued loyalty to the fortunes of the society, and trusting each of them could and would say the same. "The officers of the Association," coupled with the name of the hon. sec. (Mr. R. Woolfall), was then given and received with the greatest cordiality. Mr. Woolfall, in reply, thanked the meeting for the more than kind manner in which the toast had been accepted, and trusted and believed that the same brotherly feeling common to all genuine anglers would always exist amongst the members of the association, and strongly urged upon the meeting the absolute necessity of union and the sinking of all petty and personal differences for the common good. He then gave a digest of the doings of the association during the past season, from which it appeared that the members had had eleven public outings and competitions, five in the river Vyrrnvy at Llanymynech, two "go where your please" at Eastertide and Whitsuntide, one in the canal at Rufford, one in the canal at Mollington, one in the mere at Newton-le-Willows, and one in the lake at Ellesmere. At these contests the following prizes had been won:—£12 3s. 6d. cash in various sums by the association, 5s. by Mr. J. Evans, cigar holder by Mr. Avann, aquarium by Mr. W. Jones, reel and line by Mr. Pratchett, fern case by Mr. Chandler, box of cigars each by Mr. Leaman and Mr. Perkins, 10s. 6d. by Mr. J. H. Jones, ham by Mr. W. Walker; £1 1s. by Mr. W. Pearson, and a half-barrel of beer by Mr. T. Baxter. There is also the handsome challenge cup, presented by Messrs. Ellinger and Boulding, for the three heaviest trout and grayling taken during the season at the recognised club contests, to be won twice, in different seasons, before it becomes the absolute property of any member, each winner, however, to have his name inscribed thereon. In addition to the foregoing prizes there are the following: 10s. 6d. and 10s. 6d. by Mr. J. Wilkinson, one for the heaviest basket of fish, and one for the heaviest single fish taken out of the lakes, ponds, and canals of Lancashire or Cheshire; fly-rod and reel and line by Mr. Pratchett, one for the heaviest trout or grayling, and the other for the heaviest coarse fish taken by members who had not won a prize at the end of the season; aquarium (a second one) by Mr. W. Jones, for the heaviest basket of fish weighed in at the club house and £7 1s. 6d. in cash by the association for gross weights and single specimens. Was not this, the hon. sec. asked, a grand total; and did it not conclusively prove that within itself the association had a vitality that promised a long and prosperous career? They had had a bad season, and most of the members had done nothing very big; but they were not alone in this respect, as the results of other competitions published in the FISHING GAZETTE would amply prove. In any case, their excursions had been enjoyable ones, and they must not complain if the elements had in the main been against them; this was not their fault, but their misfortune. They had now acquired the right of fishing in the reservoir at Pen-y-cae, near Ruabon, which was well stocked with fine trout, and the executive were on the track of other water which would be secured early next year if it was found suitable and within their means. In concluding, the hon. sec. appealed both to those present and those absent to simply pull together, and to avoid all jealously and differences, and they would then be assured of that success in the future they had had in the past. The "Donors of Prizes" followed. Mr. W. Walker cordially responded and promised a prize, as did also Messrs. Pearson, Chandler, W. Jones, and Pratchett, for the next season. "The Health of the Treasurer" was next given, and Mr. W. Jones replying, made a heart-stirring speech, which was enthusiastically received and applauded to the echo. Several other toasts were given and heartily acknowledged, and at the call of time the company separated, all well pleased with the evening's entertainment. Mr. O'Brien ably presided at the piano, and Messrs. W. Jones, Evans, H. Robinson, Langley, and H. Ellis—the latter being in especially good voice—sang some capital songs, which greatly added to the common enjoyment and harmony. R. WOOLFALL, hon. sec.

THE LIFE IN INFUSIONS.—If lately collected rain-water be examined in the hope of discovering any of these minute forms of life, disappointment will occur. But if some hay, or any vegetable matter be allowed to soak in pure water exposed to the air, or if pieces of flesh, brain, blood, or any animal substance, be placed in water, and also exposed for a day or two, a great many species of these animalcules, or Infusoria, the individuals being in vast multitudes, will be distinguishable. Certain kinds of these animalcules are almost invariably to be found in water in which particular vegetable or animal substances have been soaked, and a succession of kinds is often observed to occur as the infusion gets old. The free access of air is requisite for all this, and the hay and animal substances form the food of the minute creatures, whose derivation is not from the minute structures or broken-down tissues of the plant or animal. The air contains the extremely minute spores, or reproductive particles, whence the animalcules spring. There is no spontaneous generation of these animalcules, and no turning of dead animal or vegetable tissue into them. The term Infusoria, or animals of infusion, merely relates to where they are to be found in most instances, but not invariably, and it must be carefully noted that the animalcules are not derived from the infusions. Certain infusions suit particular kinds of Infusoria, and these particular species are to be found in them.—From *Cassell's Natural History* for November.

RIVER REPORTS.

MID-THAMES.

The river is now in prime all-round order for any class of winter fishing, and although the stream is still strong, those who know how to go to work will find themselves amply rewarded, as roach are well on lobworms, perch and minnow, jack, or anything kicksome, and chub, doing the cheese, or anything in the snail line. At Bray, Plummer, junr. has lately had three nice Jack, and some 15 lb. of perch; and at Hurley Mr. A. Arter has had two jack of 6¾ lb. each; Mr. Gersie, perch, of 1½ lb., 1 lb., 1 lb., 1 lb., and ¾ lbs. respectively, besides roach in galore, all taken with the retiring tail of lob. Thursday evening, water in first class order for any winter fishing, perch being best on of all, with minnows for bait.—MARLOW BARR.

Chichester.

On the whole the weather during the past week has been fairly favourable for piscatorial pursuits, although when "Old Sol" hides his face it has been too raw cold to make a long sojourn by the water-side. Pike have been fairly on feed, but live baiting proves most remunerative. A fish of 3½ lb. was taken, at the basin, yesterday. Roach fishing is at a discount here, except for bait. In the weekly competition Mr. Young took first prize with roach from the Rother, which is in too high flood at present to repay the journey. I hear of some fair pike from the Selham portion of the water. A clearance of weeds by the aid of a chain and ropes from the basin has been resolved on by a few energetic rodsters, when spinning may be indulged in. Large fish there are, but at present nothing but small specimens have been taken.—GEORGE F. SALTER.

Dove.

Water still too plentiful for fly-fishing. We scarcely ever remember the river being so long in a state of flood. Rain falling every alternate day or so, prohibits the settling down of the stream to anything like its customary height, and as a consequence the grayling fishing is practically stayed until more favourable weather sets in. With regard to the trout the present weather is not without its advantages for the spawning operations; the necessary migrations are being unattended with so many chances of molestation and injury in the small rills annually ascended by them—THE SPLODGER.

Exe (Exeter).

Until now we have had a very bad time of it for anglers, owing to heavy floods and gales, and the river has been very full and cloudy; it is now fining down. You no doubt saw from the Exeter paper I sent you last week our canal burst its banks between Salmon Pool and Double Locks; much damage was done, and many fish were left quite out of their element; the repairs were, however, executed with commendable promptitude, and I hope it is the first and last accident I may have to report to you. Very little sport has been had, but there is one thing that has done remarkably well, viz., "Strawson's waterproof," which is unrivalled in the opinion of most all our anglers. Thanks to the generosity of Mr. King, I gave his natural bait a good trial in a private pond, and I caught roach innumerable and several perch. Wild fowl shooting has been excellent, one sportsman at Exmouth succeeded in bringing down five out of eight Brent geese, and the wild duck and widgeon have been our neighbours for the last few days. I hope to send a better report next week.—J. A. KELLEY.

P.S.—The wind is south-west, and very warm; our creels should, therefore, have some work now.

In my last report I mentioned about the overflowing and bursting of the bank of the canal here. The town council, through the town clerk, have offered a reward of five pounds for the discovery of the offender or offenders who caused the damage by lifting up the sluice gates at the hacks, near Exe Quay. I have only heard of one good take of perch in the canal with live minnow. The river is still cloudy and thick, but gradually fining down; should the bright weather we have had to-day be continued, bank anglers will soon be well at work again. A gentleman took two pike in the river last Wednesday, 6¼ lb. and 5½ lb. respectively, and this evening we had one of the finest golden sunsets I have seen since I have been in "Sunny Devon." If the present weather continues, pike rodsters should muster good creels between this time and the sending of my next, which I hope they may.—J. A. KELLEY.

Ilfracombe.

Sea fishing has been very slack this week, owing to the weather; nothing but gales of wind until to-day (Thursday). This morning three boats caught a slant and had a short drift. They hauled four maize of herrings and a few hake. All boats are out now drifting. Some good hauls of fish are expected. The spoil has been very good from the jetty with hand lines. Several pollack and ling from 12 to 14 lb. each have been caught, and some small congers. Weather at present mild.—E. COMER.

Leicester.

Since my last report the weather has been more favourable for angling operations, and the few bright days we have had have been in favour of roach fishermen, and several have shown some fair baskets of roach and perch. At the Leicester Angling Society's preserves one of the most favoured spots lately has been at Hacks Meadow, and some very fine roach have been taken off the bottom, baiting with small red worm. Pike fishing is very quiet, although numbers have been trying the best-known spots. The best fish that I could hear of being captured was one weighing about 5 lb. The Aylestow waters are now in capital condition for winter fishing, and the subscribers to these preserves have had some good sport during this week. I heard of several brace of chub being taken. At Barrow-on-Soar pike fishing has been the principal business during the week and several out-town anglers have been rewarded by some nice catches of sizeable fish. A few of the devotees continue to pay visits to the Wreake, and some fair quantities of fish have been caught at Brooksby and Frisby. On Thursday the weather was very bright and fine, and the waters are now in good condition for fishing.—ALERT.

Ouse (Littleport).

I have had nothing to report for the last few weeks owing to the river being in flood, and the weather being so cold the fish would not draw up on the flats to feed. We got a little turn among the roach on 23rd and 24th inst., the weather being a bit mild on those dates. On 23rd, Mr. C. Howe, of Thurfield, near Royston, got fourteen roach, going 5 lb. the lot. I also got about the same weight; on 24th, Mr. George Bassingbourne got 13 lb. good roach, in a little over 4 hours; since that date they have again been off the feed. The water would have been down nicely into its bed by Saturday, but I am afraid a heavy rain we had this morning will make it unfishable again for several days.—C. SOUTH.

Ouse (Blunham).

For some weeks past these rivers have been very much flooded, but now they are in first class condition for fishing, with a good chance of sport.—S. P.

Thames (Chertsey).

Looking at the water to-day dropping quietly by the boughs where I have seen several good jack break away, it looked tempting for paternoster, and one or two places for floats, nice cosy nooks, water along the boughs as bright as summer time. I had a peep at a favourite place further off, where I had about three hours with Mr. Allen once. We took eight jack not less than 5 lb., and the largest 8 lb.; and I have had good takes besides at the same place. The water is all that one could wish, high, but I always get the best jack then. Presently comes rain, and then we shall be again done for a time. Whether I shall get a customer in time I do not know, but if I do I shall have some good takes to account for.—JAMES HASLETT.

Thames (Eynsham.)

Last week I was unable to send you a report of angling, owing to the rise in the floods and the general rough weather we had here, but I hear that a few jack and perch were taken in the quiet spots off the floods. A distinguished angler from town paid us a visit this week. I went with him to the Evenlode on Wednesday, and a nice day's sport we had amongst the roach, perch and chub; but the rain Wednesday night, which was very heavy, caused the water to be in such bad condition on Thursday that nothing could be done. Altogether the floods have receded considerably, and we hope very soon to be able to fish in the Thames in this neighbourhood.—W. B. HOWE.

Thames (Goring).

Water now a little thick, in good order for roach fishing; by Sunday, if it keeps fine, water will be in good order for all round fishing; I have had two days fishing since my last report, best day, one jack, 4 lb., and some good perch, largest perch about 1 lb.; prospects at present look well for the next few days.—JOHN RUSH.

Thames (Oxford).

Last night's heavy rain has slightly altered the height of the Cherwell, but the Thames still continues in splendid condition; the water is slowly subsiding, and the grass is at last beginning to show, brown and slime covered, on the soddened meadows, but the miasmatic effluvia which arise from the rotten vegetation is not quite so fragrant as "Araby's balmy breezes." On Saturday I tried the Holywell Mill Stream, and the back water at Mesopotamia; but after wading for about 300 yards, and getting thoroughly wet about the legs and generally uncomfortable before I could reach the banks of the river, when I arrived there I found it impossible to fish, so I gave it up as a bad job and came home. The same day Mr. Gray had a few good perch and roach, at the base of the old dog kennels, a continuation of the piece I was trying, but I cannot give their weights as I have been unable to see that gentleman. On Sunday I only managed to get as far as the Fisherrow, but no sport had been obtained there. Mr. Corbett was out one day at Kirklington on the Cherwell, but he only caught one chub of about ¾ lb and a few fingerlings, which were returned to their native element. He tells me that the water meadows are still badly flooded, and that the water was beginning to thicken. The big jack I mentioned last week was a canard, emanating from a—I suppose I must say—gentleman, who aspires to the title of angler, and it was put about for the benefit of a friend of mine, who reports for another leading sporting paper. Why we unfortunate senders of news are to be considered the butt of every idiot whose shallow brain is capable of hatching a lie is beyond my comprehension. I hope he is satisfied with his work. If he is, I do not grumble, or wish to interfere with his innocent amusement, and I think every right-minded person will agree with me that he has justly earned a right to be considered a consummate liar.—CHERWELL OTTER.

Thames (Richmond).

The fishing of the last week has not been so good as I expected, owing to the heavy rain of last Thursday night and the cold winds that have been blowing during the week. The water is now in capital order, and, with reasonable weather, I anticipate some good sport during the next week.—JOHN BUSHNELL.

Thames (Twickenham).

Wind, N.E.; the weather like spring, and the water has run off lower than we have had it for the past six weeks, and I am pleased to say we have commenced work again and have had some very good takes. This day Spong has been out with Mr. Munford, of Islington, and caught nine dozen good fish, and Mr. Barlow and friend, with Ted Brown, took a nice basket of fish. Tides suit for whole-day fishing.—ALFRED PERRIN.

Trent (Newark).

Water came on to-day high, thick, and unfishable; no sport as far as I can learn, for the past week. Prospects for the next few days *nil*, unless a decided improvement takes place in the water. The fish in the Trent are having another close time, for it is nearly eight weeks since we had a chance of wetting a line.—THE TRENT OTTER.

Trent (Nottingham).

Although running at a great height, the river in this district on Thursday was in excellent condition for bottom-fishing, with either worms or maggots. The flood-water quickly ran off, and on Tuesday the gentle swims were fishable above Nottingham. Some nice lots of dace were got with the cockspur worm in the Wilford Allotment; and on Thursday a basket of splendid roach came to hand from the vicinity of Stoke. A few bream were also caught. The weather was all that could be desired, and in the upper reaches satisfactory accounts reached me of the doing amongst roach and dace. In this instance nearly all were caught with maggots. Apart from the river, the pike contingent have been very busy in the lakes and reservoirs. On Tuesday, a friend of mine took two fish, the largest weighing 13 lb. and the other 6 lb., besides letting four others escape. Several very large fish have also of late been taken with the spinner in Mansfield dam.—The Man at the Clubs.

Wharfe (Yorkshire).

There have not been many anglers out during the past week, neither has the river been in proper condition for grayling fishing. I had a turn last Saturday on a preserved length of the river in company with one of the best fly-fishers in Wharfedale. The weather was something fearful, a sudden tornado of rain and hail recurring about every hour. The river was very full and discoloured, but by the advice of my companion I stuck to the quiet back eddies and places where the becks ran into the main river. At the close of the afternoon I had nine nice grayling and I consider that I earned them, as at times my hands were so benumbed as to render it a matter of some difficulty to hold my rod. I gave half-a-dozen to a friend in Leeds who told me yesterday that two of the largest were full of spawn. I did not see it to form an opinion, but think that they must have been feeding upon trout ova, as they could not possibly be spawning themselves at this season of the year.—Francis M. Walbran.

Witham (Boston).

The rain which I spoke of last week has caused considerable rise in the waters around this centre; but by Monday most of the drains and other streams, except the Witham itself, were again in angling trim. The main river is not yet in condition, but is running down fast, and supposing the present weather holds, will soon be affording its accustomed sport. In consequence of the state of things prevailing, there has been little pike-fishing done. And no wonder. There can be no pleasure in patrolling the banks of the streams just now under any circumstances, for many of the meadows are more like quagmires, and the work, besides being uncomfortable, is positively laborious. Some few, however, have been killed on the Stickling drain, and also at Cherry Corner; and on the South Forty-foot, near the junction of the Twenty-foot, and at Wyberton Bridge. No heavy fish has been amongst them, but two or three went to from 5 lb. to 6 lb. At the last-named place some nice perch were killed on Tuesday with worm. On the Boston drain there have during the week been a few fairly good roach takes, and also some on the Aqueduct water, but this kind of sport has been limited to a few instances, and those in the middle of the day. A sharp frost, and afterwards snow and rain, stopped the anglers on Wednesday; but as I despatch this circumstances are more favourable.—The Yellow Belly.

Wye and Derwent.

Both rivers have run down nicely during the last week, and will soon be all right for fly-fishing, especially the Wye, which ought to yield some good baskets of grayling next week between 12 o'clock and 3.30 p.m. The furnace and dyed hackle flies will be found to kill grayling well up to Christmas, weather and water permitting. Fish are found to rise the best at this season of the year in the deep, slow runs. Sport all up and down the Derwent with the Bottom fishers during the week has been first-class, and good baskets of both grayling, roach, and dace have been killed by the aid of cockspur worms and maggots for baits. Weather greatly improving.—Geo. Jas. Eaton.

Yare (Norwich).

The weather has again been most unfavourable for angling in this district, only those who can seize the favourable opportunity being able to get at their favourite pastime, it being really no use making any arrangements in advance, as the probability has been that severe gales and storms would prevail. One member of the Champion Angling Club was at Brundall last Saturday, and was successful in landing a nice lot of very fine-conditioned roach. Another member of the same club took several good jack, one turning the scale at 16 lb. These were all taken spinning with the Pennell flight, and I am quite of opinion that no bait can be more deadly that a nice dace, well arranged on one of these flights. I mean during the coming season to persevere in this direction, and will let you know the result. We are hoping for a change of weather during the next month, when jack fishermen should be busy. Hail, rain, snow, and sleet have to be faced at present by the ardent lover or the angle.—Robert Moll.

Yore (Hawes).

I was out a short time on Saturday last and got a brace and a-half of grayling weighing over 1½ lb. Fish under half-a-pound are the exception in this district, although they seem to be the rule in the lower waters of the Yore, according to Mr. Walbran's report of last week. Snow fell in considerable quantities on Monday last. Tuesday was a most favourable day, but no anglers out. To-day (Thursday) the water is in fine trim, and is likely to remain so for the next few days, as the barometer is rising.—Jos. Corry.

CLUB REPORTS.

ACTON AND EALING ANGLING SOCIETY.

On Tuesday, Nov. 21, we had a quiet spread at the George and Dragon Hote, High Street, Acton, after which the president, A. C. Bocking, Esq., presented the prizes that have been won this season up to that date. Mr. W. Howell took a gold pin, first prize, and 10s 6d., the latter for the largest fish in the competition. Mr. Townsend took second prize (for second gross weight) 24s., which was a sweepstake of 2s. each, subscribed by the twelve competitors in this match. Mr. A. Eydmann took, as third prize, a rosewood winder, with set of lines and floats complete. Mr. T. Eadbrook, in another competition, was first, winning a pair of fishing boots, value one guinea; the second and third prizes were not taken, owing to the state of the water, the match having been fished when the floods were out 3 weeks ago. The healths of the officers was drunk during the evening, the prize-givers' and the winners' healths were also drunk; all the gentlemen responding in brief and suitable terms, especially the chairman, who works hard for the welfare of the club, as does the vice, Mr. W. Eydmann, and secretary, C. Simpson. Since the supper another competition has been fished, the result being: Mr. W. Eydmann, 1st, winning waterproof coat; Mr. W. Howell, 2nd, roach rod; Mr. T. Eadbrook, 3rd, silver-plated fruit basket: Mr. Cook, 4th, a splendid time-piece. Mr. W. Eydmann had a capital show of roach, dace, perch, and one rudd from Eel-Pie Island, which we thought a fish rarely caught in that locality. Perhaps Mr. Marston, in one of his useful footnotes, will say if such is the case or not? Are they common in the tide-way? I forgot to say before mentioning this competition that some capital songs were given during the evening of the supper, one of which was composed and sung by the secretary for the occasion. Our vice-president has presented a handsome silver cup, under glass shade, to be fished for on Saturday, Monday and Tuesday next. The conditions are from the bank, only any public water, jack only to weigh, the largest fish to take the prize, not the gross weight. We have had some capital shows this past fortnight, the heaviest take being by Mr. Slatter; the least quantity, if any at all, by—Black Bag.

AMICABLE BROTHERS ANGLING SOCIETY.

Mr. Arnold, roach, 4 lb. 1 oz.; Mr. Carrington, dace and perch; Mr. Dwelley, roach, dace, and chub; Mr. Lewis, bream; Mr. Hunt roach and perch; Mr. W. Lake, roach and perch. The annual supper will take place in the club room, Dec. 11, and the distribution of prizes on Wednesday, Dec. 20. —T. Worledge.

Nov. 26.

ANCHOR AND HOPE ANGLING SOCIETY.

Very few of our members were out on Sunday, the 26th, Mr. A. Shakle saving the club from a blank with 3 lb. roach from the Lea.—D. Davis, secretary.

ANGLERS' BENEVOLENT SOCIETY.

Augustus Harris, Esq., proprietor of Theatre Royal, Drury Lane, has granted, in the most generous manner, two nights during the run of the pantomime for a ticket benefit in aid of the funds of the Anglers' Benevolent Society. Full particulars will be duly published.—R. Ghurney, secretary.

BERMONDSEY BROTHERS' ANGLING SOCIETY.

Mr. Frost saved a blank on Sunday with fish from Pulborough. The half-yearly supper takes place on Tuesday next at 7.30.—A. G. Crocker.

BRISTOL GOLDEN CARP ANGLING ASSOCIATION.

The distribution of prizes won at the contest described in your last publication were presented to the winners on Monday evening, there being a large gathering to witness same. The prizes were of good value, consisting of several tackle books, well-furnished rods, several sets of jack tackle, reels, landing nets, bait tins, fishing baskets, several sets of artificial baits, cruet stands, birds and cages, with many other valuable prizes One given by Mr. Hamilton, the talented artist and photographer, of Paul's Street, Kingdown (£2 2s.), who, on the day of the contest succeeded in taking several groups, also one of the committee, in a most artistic manner—a great number of the photographs being purchased by the members present. The evening's proceedings passed off in a most satisfactory manner, each winner being much satisfied with the prize he had won. Arrangements were also made for future contests, many prizes being again promised; and also arrangements as to an annual dinner, &c.—J. W. Hadden, president.

CITY OF LONDON ANGLING SOCIETY.

The following members weighed in on the 26th:—Mr. Nitz, a jack 3 lb. 2 oz., from the Rye House, and Mr. Castell, roach, from Rickmansworth. On the 10th December we fish a pegged-down match at Weybridge for four prizes. Our return visit on Tuesday was well attended, twenty-two clubs being represented, viz., The Amicable Brothers, Amicable Waltonians, Hoxton, Brothers, Great Northern, City of London, Odds and Evens, North Eastern, Knights of Knightsbridge, Good Intent, Star, Eustonians, Little Independent, Bermondsey Brothers, Anchor and Hope, Barbican, Beresford, Bostonian, Buckland, Crown Piscatorial, Duke of Norfolk, Peckham Brothers, and the United Brothers from Deptford. We had some good singing by the following gentlemen:—Messrs. Watts, Frost, Neale, R. Smith, Burwash, Martin, Jennings, C. Watling, Vanhagan, Stevens, Stidolph, Sparrow, Page, A. Barr, Fitch, Gottschalk and Pratt. Mr. Watts, of the United Brothers, in the chair, faced by Mr. Frost, of the Bermondsey Brothers; Mr. Benningfield, pianist. The next visit will go to the Odds and Evens.—Cas.

GOOD INTENT ANGLING SOCIETY.

There was not many fish brought to the club on Sunday last. Mr. Cox, jack; Mr. W. Hughes, jack; Mr. Maybury, roach. The prizes for November were taken by Mr. G. Bates, first; Mr. Maybury, second; Mr. Donovan, third. The members will fish at Bourne End for 12 prizes on Sunday, December 10th, all pegged down.—R. Murphy.

HAMMERSMITH UNITED ANGLING SOCIETY.

On Sunday, the 19th, Messrs. Lewis and Reynolds had dace and roach from the tidal waters. Messrs. Aldridge and Walters had roach and chub from private water on Thursday. Mr. Lewis, roach and dace from Kew Bridge, and Mr. Reynolds, roach from Brentford Docks. On Friday Messrs. Steadman, Burbidge, and Lewis had dace from Kew, and the two latter weighed in on Saturday. Mr. Hitchcock, fishing at Kew on Sunday, had some roach, and and Mr. Lewis, dace, and Mr. Pitts, 6 lb. 3 oz. of perch and roach from Henley. Next Thursday being quarterly night, the subscriptions are due; and members are desired to attend, as arrangements for Mr. Pitt's prize and a tripe supper will be made.—Argus.

IZAAK WALTON ANGLING SOCIETY.

The two special prizes given by Messrs. C. Green and T. Dennison, jun., for the heaviest weight of any kind taken on the four Sundays in November, were were won by Messrs. G. Manning and G. Wood. The half-yearly distribution of special prizes took place on Wednesday, the 29th inst., on which occasion the members had a supper, which was put upon the table in a very nice manner. Mr. A. Rogers (the host) occupied the chair, Mr. G. Wood the vice-chair. After the cloth was cleared the chairman, with a few very appropriate remarks, presented the following prizes:—W. H. Hawks, a pair of lace curtains; H. Butt, a music-stool; G. Bliss, a cruet stand; J. Barnes, a box of cigars; H. Butt, a sewing machine; G. Wood, a fireguard; W. Mecham, a rod; J. Barnes, a lamp; G. Manning, a gold ring; W. Mecham, a work entitled the "Fern World"; H. Auburn, a pair of slippers; W. Mecham, angler's knife; W. Wilkinson, a silk umbrella; G. Wood, two fancy cabinets. After the prizes were given, the chairman presented the secretary with a fishing box, stating it was from a friend who did not wish his name mentioned, saying it was given as a mark of the esteem in which he was held. There was seven special prizes, the conditions of which are to be arranged by the members on the next meeting night. This brought the meeting to a close. The remainder of the evening was spent in harmony; and after some capital songs and recitations, a vote of thanks was given to the chairman.

MARLOW ANGLING ASSOCIATION.

On Tuesday last the members of the above association held a fishing competition for two prizes, first prize a jack rod, second a roach rod; five punts starting for the above, the weather being very uncomfortable, the wind enough to blow you out of the punts, and sport so bad that some of the competitors did not stand it; fish would not bite. At four o'clock, the time to weigh-in, only one jack, 3¾ lb., was caught, and five small perch; the former prize by Mr. Stockbridge, and the latter prize by Mr. Scott. Afterwards an excellent dinner was provided by Miss Compere, of the Complete Anglers Hotel, when about thirteen sat down, the chair being taken by J. Rawson, Esq., vice-chair by R. Jackson, Esq., hon. sec. After partaking of the good things provided, which was the best bite of the day, the remainder of the evening was devoted to some excellent songs given by Dr. Shone, Mr. C. M. Footitt, Mr. Bedford, and others. The evening was brought to a close at ten o'clock.—A. Maskell.

RODNEY PISCATORIALS.

The members of this society will compete for four prizes in the association water at Weybridge, in the river Wey, on December 3, 1882. All fish to weigh according to society's rules. I am requested by the members of this society to return their most sincere thanks to the donors of the following prizes:—Mr. and Mrs. T. Hughes, £6 6s.; Mr. G. Lee, £6 6s.; Mr. G. King, £1 1s.; Dr. Canton, £1 1s.; Mr. Hatmon, 10s. 6d.; Mr. G. Hockley, silver-plated tankard; Mr. R. Grant, a handsome bronze lamp. I also return my sincere thanks for the able manner in which they have assisted me in my endeavours to form a society among my brother anglers in this neighbourhood, who, like myself, have only the one day in the week which they can devote to angling. In regard to the society, I must say that we are in a flourishing condition, as our balance sheet will show when produced on Wednesday next, our quarterly night, on which occssion all prizes won during the past quarter will be distributed. Messrs. Grant and Chaplin will represent this society at the meeting to be held at the Foresters' Hall, on December 6.—Pixie.

November 30.

ROYAL GEORGE ANGLING SOCIETY.

The following members weighed in on Sunday last:—Mr. Wood, 4 lb. of roach; Mr. Parsons, 2 lb. of roach; Mr. Guynan 4½ lb. roach and dace; Mr. Chapman, 1½ lb. roach; Mr. Palmer, 3 lb. roach; Mr. Bernhardt, 1 lb. roach. —C. W. W. Bernhardt, hon. sec.

Nov. 30.

SILVER TROUT ANGLING CLUB.

In the report of the half-yearly dinner in the Fishing Gazette last week, the name of Mr. John Pascoe was inadvertently omitted amongst the vocalists on that occasion. Mr. John Pascoe is a rising baritone, and the skilful and pleasing rendering of his songs were most highly appreciated and loudly re-demanded. His services thus kindly given to the Silver Trouters are deserving of of every acknowledgment.—B.

SOUTH LONDON ANGLING SOCIETY.

On the 26th six of the South London fished six of the Walworth Waltonians a pegged-down match at Sawbridgeworth for a supper, the losers to pay. The weather was bad, very cold, and the wind so strong that the Stort was a miniature sea; there was no telling when had a bite. There were only two roach taken, weighing 5½ oz. They were taken by the Walworth Waltonions, who won. The take could not have been much less; but we were informed the river had been netted five times in the last three weeks, so we could not expect much.. Weather and take of fish excepted, both sides declared it was one of the most pleasant days they had spent. There was not a hitch in it; and we, the South London, hope to meet them with better weather next time.—G. H. Field.

ST. JOHN'S ANGLING CLUB.

The members of this club had reasons to be well satisfied with themselves on Sunday, the 26th, for every tray in the club was full of fish. The following is the list of members and places:—Mr. Rushton, perch and roach from Windsor (the perch were all good fish); Mr. Fudge, roach, dace, and jack from the Lea (the dace and jack was in splendid condition); Mr. Hunt, perch from the Thames; Mr. Clark, some fine chub from the Thames; Mr. Thorling, roach and dace from the Colne; Mr. Stevens, roach from the Lea. Messrs. Bray, Leacock, Mathews, Hebben, Reynolds, and Wolf were out, but had very bad sport, as the water was out of condition and the river Way all over the fields. —F. Thorling.

Nov. 27.

THE JOVIAL ANGLERS ANGLING SOCIETY.

I have the pleasure to inform you that we had a fishing competition on Sunday last for three club prizes; 1st for the heaviest fish of any description, 2nd for the heaviest weight of fish, 3rd for the second heaviest gross weight. Our "Jovials" turned out in earnest, and, although the weighing in was not very heavy, it showed that we had all been doing our best. Messrs. Steade, Webber, and Davis were the successful competitors. At the same time, it gives me a pleasure to tell you we keep adding to our members and funds. The water here now is in capital condition, and there are some splendid roach being taken to-day (Nov. 28).—Harry Platt.

THE LITTLE INDEPENDENT ANGLING SOCIETY.

On Wednesday evening we held our half-yearly supper, which proved a great success. The brother members and friends sat down to a sumptuous repast, provided by our esteemed host, Mr. W. Loomes, which reflected great credit both for himself and our worthy hostess. After supper, Mr. Brown, of the Coffee House, Charlton Street, Somers Town, taking the chair, and Mr. Pipe the vice, Mr. Brown opened the harmony with the old song, "The Little Brown Jug," and was followed by Mr. Pipe with "The Slave Ship," both meeting with great applause. After that the following gentlemen obliged:—Mr. Letch, Hurwood (Titmus of the Phœnix Angling Society), Mr. Matthews on the whistle, Mr. Hopton sang "My Lively Polly" in fine style. Mr. Revill, of the Upper Welsh Harp, who could not attend, sent £1 to be spent towards the harmony, and promised a handsome present towards our fishing contest. Mr. Brown (Coffee House) likewise gave some valuable prizes to be competed for; also, Mr. Price gave us a handsome prize. The pianist, Mr. Brown, played throughout the evening in a manner thoroughly appreciated by all. The evening closed with everyone being only sorry it ended so soon.—W. H. Evans, secretary.

Nov. 30th, 1882.

THE PISCATORIAL SOCIETY.

At the weekly meeting on Monday evening last, at Ashley's Hotel, Coven Garden, with Mr. H. J. Inderwick in the chair, Mr. Thomas Huggett has been again to the fore by weighing in from Henley 15 lb. 2 oz. of good perch, the largest 2 lb., and a tench of 3 lb., 4 oz. The capture of that quantity of fish in water that was out of condition, furnishes another example of Mr. Huggett's skill and perseverance. He was highly complimented by his fellow members, but the best compliment they can pay him is to follow his example and add to the society's gross weight of fish in the register book. The prospects are regarded as very favourable for the club competition on Monday next.—B.

TRAFALGAR ANGLING SOCIETY.

A few members of this society were out on Sunday last, but their usual bad luck was with them, only two small fish being taken by J. Gaze, fishing the Thames at Sunbury Lock, viz., a roach and dace, weight 8½ oz; water very high, but a good colour. A visit will be paid to this society on Monday next, December 4th, hoping to see a good muster of brother anglers.—J. Gaze, hon. sec.

WALTON WALTONIANS.

The result of the competition that took place between this society and the South London last Sunday ended, after a great struggle to get fish on both sides, in favour of this society. Two of the six that represented this society, Messrs. Bayley and Delchaye, junr., managed, each of them, to land a roach. This is the second competition between these societies, and on each occasion "The Southeron" has come off second best. Never mind, W. Breewood and Co.; better luck next time. We will have it out in the supper.—Pixie.

WALTONIANS.

On the 22nd Mr. Rushbrook weighed in 3 lb. 5½ oz.; Mr. Malcolm also weighed in. On the 26th Mr. Starr had 3 lb. 14¾ oz. of roach; Mr. Packman, 2 lb. 8 oz. of roach. Messrs. Malcolm and J. Moose also weighed in fish.—A. Marriott.

Nov. 28.

CLUB AND OTHER JOTTINGS.

By L. B.

Re International Fisheries Exhibition and the London angling clubs.

A meeting of the representatives of angling societies will be held at the Foresters' Hall, Clerkenwell Road, on Wednesday evening, December 6. The conditions originally decided upon by the International Fisheries Exhibition Executive Committee having, after careful consideration, been so altered as to meet the generally-expressed views of loan exhibitors, should remove all difficulties, and leave the meeting on the 6th nothing to consider except how best to acknowledge the concessions made by the executive by getting club representatives present to pledge their societies to send their, in many instances, magnificent collections of preserved fish and other trophies in such numbers as to make a display worthy of the anglers of this huge metropolis.

The Cavendish Angling Society has been removed to the Duke of York, Wenlock Street, City Road.

I was glad to read that Mr. Crumplen's valuable services received recognition at the hands of his brother members. There are none among the foremost representatives of the London anglers ever ready when called upon to make any effort or sacrifice of time and money to promote the interests of their brethren, or those of the sport we all love so dearly, more deservedly respected than Mr. Thomas Crumplen, and nothing short of a serious indisposition, accompanied by violent physical pain, prevented my being present on so auspicious an occasion.

The half-yearly supper of the North-Western Angling Club took place at the club house, the Lord Southampton, Southampton Road, Haverstock Hill, on Thursday evening, November 23rd, between 50 and 60 members and friends sitting down to partake of the capital repast provided by host Wetenhall. Messrs. Aldis and Marshall faced other in the chair and vice-chair respectively, and among the visitors present were Messrs. C. P. Wheatstone, Jarvis, Jennings, W. Packman, Clark, &c. A number of capital prizes were presented to the successful anglers, quite a formidable list being made up to be fished for during the coming half-year. Some first-class songs, toasts, &c., made the remainder of the evening pass pleasantly, and only too quickly.

The usual monthly meeting of the United London Anglers' Central Committee will take place at the Bald Faced Stag, Worship Street, Finsbury, on Monday evening, December 4th; Mr. S. Morgan in the chair.

A West Central Association, No. 2 District, visit will be paid the Trafalgar Angling Society, George and Dragon, Greek Street, Soho Square, on Monday evening, December 4th.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

BAYONET-POINTED HOOKS.

Sir,—One very often hears complaints made by anglers that, after having hooked a fish and played it, it has got off. This is due in most cases, especially in fishing for pike and leather-mouthed fish, to a fault in the hook, not having been "barbed"—I mean driven home. Penetrating power in the hook I have always considered an essential in fishing, and on purpose to have my hooks in the sharpest condition, I constantly keep a fine watchmaker's file in my pocket-book, and use it when necessary. But there is something more than sharp pointing required, if you want the fullest and quickest penetration, and that is to have the hook's point, from the barb, instead of being round, as it is now in all hooks, made three-edged—or bayonet-shaped. I do not know that the idea is new. I have never seen a hook for sale so made, and I have taken my idea from practical experience. Both the surgeon and the shoemaker know how easily the skin can be pierced by a bayonet-pointed or triangular needle, and how difficult it is to stitch a wound or sew leather with a round one. Hence, for the last few years, I have often filed my hook-points to this shape, with the most marked advantage, having found that the slightest touch will drive them home; and if the hook touch the fish anywhere, there is little chance of its escape—such is my experience. As a pattern, I sent to Messrs. Hutchinson and Son, Kendal, a surgical needle (as enclosed), and from it I have received patterns (as enclosed) which, for penetrating power, I should think are unsurpassed. Any shape of hook can be so pointed, and I feel sure if such pointed hooks were used once, the angler will feel inclined to discard all others.

I have given Messrs. Hutchinson the privilege of making these hooks in their manufacture or sale. I have no monetary interest.—I am, &c.,

John Brunton, M.A., M.D.

Nov. 27, 1882.

P.S.—Sample of hook is untempered. I could give many instances of the value of this hook, but do not wish to encroach too much on your valuable space.

[We think this is a *very capital idea.* The bayonet-shape *must* be better, for the simple reason that the sharp sides of the point *cut their way in,* whilst the round point has only the sharpness of the extreme point (which may be equal, of course, in both shapes) to rely on for making the hole.—Ed.]

YOU NEED NOT FEAR THE BLACK BASS.

Sir,—I have your two letters of October 18 and November 3. Have just returned from the Adirondacks, or would have replied before.

In regard to black bass and their relations to other fish, it will be well to bear in mind that while they feed to some extent upon small fishes they do not confine themselves to that diet.

There are no large cyprinoids in America except the so-called "chubs," *Semotilus corporalis* and *S. bullaris* (both of which are the *Leucosomus corporalis* of Günther, Catalogue Fishes, Brit. Mus., vol. vii, p. 269). These grow to a pound weight in some parts, but are not plentiful anywhere. Other cyprinoids are called "chub" also, but few grow to over a finger in length. You have several large fishes which come within this family, as roach, dace, &c., and they should be able to breed freely and resist the bass, which is not as greedy as a pike. Your pike have not yet depleted your waters of other fish, and I doubt if the bass will do it. I think your anglers will prefer bass-fishing to the less exciting barbel, bream, and dace, and will do their share in keeping the Yankees within a reasonable limit as to numbers.

It seems to me that the best place to look for a solution of the question of extermination of other species is not about New York, where the bass have only lived for a dozen or more years, but to the south and west, where they are indigenous. The rivers of Florida, Georgia, the Carolinas, and Virginia, as well as those of the states on the Ohio and Mississippi rivers and the great lakes, have always had black bass in them, and they contain plenty of other fish. Those waters swarm with *cyprinidæ* and a related family of soft fins, the *catostomidæ*, which we call "suckers," from the mouth being formed for sucking mud and worms from the bottom. You have not these fishes, but in some of our rivers they grow to six and more pounds in weight.

As for "worms" in the bass, it is true. At certain times of the year, say in August, our perch, *perca fluviatilis*, bass and other percoid fishes have a burrowing parasite, whose life history appears to be unknown, which looks like a larva of some insect, but may not be one, and many will not eat the fish then. I have eaten them, as I have taken worms in cherries; in fact, I never look for them nor care about them.

Perhaps your fish will not have them if they have now passed from them.—I am, &c., Fred Mather, fishing editor, *Forest and Stream.*

New York, Nov. 16, 1882.

[We measure from the platform on which the caster stands. Sometimes he was a foot or more back from the edge where the measure begins.—Ed.]

BITES LOST WHEN ROACH-FISHING.

Sir,—"Anti-Theory" cannot have the slightest conception of the number of roach bites lost out of every twenty by ordinary roach-fishers—not crack Lea roach-fishers. We must really bar these, my friend, "Anti-Theory," for I have heard some of these said crack Lea gentlemen are so fearfully clever that I have been given to understand if the fish only smell the paste it is all up, and the roach knowing this, that is one reason they so seldom catch a good dab. The next time "Anti-Theory" goes out roach fishing with paste, with the fish in the same peculiar humour as described, in fact, "not on," let "Anti-theory" honestly state how many bites he loses out of every dozen, and I think even he will be surprised.

Examples:—The very day I wrote the letter on bread-fishing there was an ordinary roach-fisher paste-fishing for roach on the opposite bank, and I will undertake to say he lost five bites out of six—yes, and his float went under nearly every time. I have seen hundreds of times some good roach-fishers lose three bites out of six in the Trent, Thames, Ouse, Colne, and Mole. Now, there is variety enough for you. The last time I was at the Mole there were some very clever London roach-fishers fishing with paste, and I will undertake to say they lost three bites out of six. Why, even "strict pegging" with the worm, you would be surprised, Mr. Editor, the number of bites lost in comparison with the fish hooked, especially with dace. I am fully borne out by "The Trent Otter." See his article on roach-fishing in his new work,* and if he is not a practical roach-fisher I should like to know who is. In fact, I actually received a letter from him last week quite coinciding with my "*theory*," and I was quite delighted to think that such a master of the art agreed with me. If I have very much amused friend "Anti-Theory," he has a great deal to be thankful for, for it is no joke to amuse people in these dull times. An angler belonging to a London club—you can have his name if necessary—told me some of these crack Lea roach-fishers would sit on the banks of the Lea the whole day and be content to take away five or six decent fish, say ¼ lb. each, perhaps one would be ½ lb. I should like to know how many bites they lost on such occasions. Will R. Woolfall kindly answer my question? He is quite right, I am dreadfully querulous. I believe people generally are when they want information. Pope, I believe, was called "a little crooked thing who asked questions," and everybody knows why he asked those questions and the splendid use he made of the information. I am excessively happy to inform friend Woolfall I have at last regained my equilibrium, and if he will keep his promise I shall be very grateful.

I suppose he is laughing at my idea of saying the pike might have swallowed the roach tail first. Poor fellow. I have not had a pike fourteen months within reach of my hand for nothing; and there was a good deal depending (in more ways than one) on the answer to my question. However, let him read the letter in your last issue signed "C. S. S.," which I sincerely hope and trust may alter his opinion.

Mr. Woolfall, fair play, if you please, but no punning! What, a secretary in all the majesty of office, lowering himself to follow such a commonplace pursuit! I am not only dreadfully sorry, but more "discontented" than ever. Has it ever struck you, Mr. Editor, what a particularly dull place this world would be if everybody was contented?

Thank heaven, that is over; now to business. It may interest, and mayhap amuse "Anti-Theory," to know that the last time I visited the Welsh Harp, I lost so many bites, it would not only make his hair stand on end, but very likely come off altogether, if he knew all. The failure was too complete to be passed over lightly, so, from mere curiosity, I asked five or six other anglers how they had fared, and the answer was the same in every instance, "We can get plenty of bites, but catch very few fish." And in an angling career extending over nearly forty years I have heard the very same remark from the very best anglers, both living and dead; and few knew the reason why, that is more.

I never said, or even hinted at, crack roach-fishers losing four bites out of six. I said "they were often and often too late." I say so still. My words were: "In fact, I know—and you know—ordinary roach-anglers will lose four bites out of six." I say so still. It appears to me "Anti-Theory" does not even know the difference between a "crack" and "ordinary" roacher. The sooner he finds out the better. And the next time "Anti-Theory" goes roach-fishing with paste, crack or no crack (especially if he puts on the great round pieces I have seen used), I should feel obliged if he would take an account of the bites missed in every twenty. I have watched most minutely hundreds of roach-fishers when they have been using paste, and taking one man with another, they have always lost quite as many bites as they have taken fish. That is my experience.

Facts are stubborn things, and I have an idea the result would rather astonish him. Now for a few remarks on roach-fishing by the "Trent Otter"; see his new work, page 84. I should imagine he is a man practical enough for all ordinary purposes. Page 84, we read:—"How many times has an angler seen his float give a hardly perceptible bob, and has waited until he has had another and more decided one, and then found, on striking, that his bait was gone, and there was no fish on his hook." Let "Anti-Theory" carefully read the reason of the above, and then read my letter, "Fish at the Aquarium," and he might say—"Why, one has copied the other." But such is not the case. I allude to where he describes the roach "blowing" the paste out of their mouths, and so eluding the hook—see page 85.

It is, nevertheless, true anybody can catch roach sometimes when the fish are quietly sucking down the bait and hooking themselves, but it is not very often he is "on" like that.

This is wonderfully true—page 85 again—"But the big fellows in a quiet water, when they are not well on, are not to be taken by anybody."

On the same page—"More roach have been lost by waiting for a trifle—for a second bob—than have been taken."

On page 88, again, when fishing with gentles for roach—"The angler strikes time after time, and yet cannot hook his fish." And then he tells you, in the most masterly manner, why.

In conclusion, I cannot help remarking what a strange thing it is a man should want to put his knife into you because you happen to be of a different opinion to himself.

Our friend, "Anti-Theory," seems to forget I am not speaking of roach-fishing at a time when, as the "Trent Otter" says—"Anybody can catch them," but when they are in that particular, fastidious, peculiar, finicking, lackadaysical humour as described, when a "crack" roacher has all his work cut out to nail them, leave alone an "ordinary" roacher.

However, sincerely hoping "difference of opinion," &c.,—you know the rest—I am, &c., Mark Antony.

N.B.—I should certainly like to hear what a few "brethren of the roach pole" have to say on the subject—it is positively getting interesting. Whoever would have thought that a visit to the Aquarium would have caused such a hubbub?

P.S.—If R. Woolfall, Esq., did not think it a most extraordinary and "astounding" incident, why take the trouble to be at so much pains to describe the occurrence, and publish it?

[We hope some other roachers will give their experience on this matter. Our experience is that there are times when you can kill fish at every bite, and others when from some peculiarity in the biting you miss 50 per cent. at least. What does friend "L. B." say? or Charlie South? or Mr. Pattison of the P.S.? or Dr. Cooper? or other well-known roach anglers?—Ed.]

ROACH BITES AND CRACK ROACHERS.

Sir,—I have read your reply to "Mark Antony's" theoretical effusions on angling matters, and, as "Anti-Theory," would like to have the opinion of some of our Lea cracks, not that I consider myself an adept at roach-fishing—still, from my own personal experience and assiduous practice for the last 25 years at the favourite sport of roaching, I think I may claim to know a little about the subject, and am prepared not only to back myself, but a good dozen of my friends, who are well up to the game, that we each and every one of us will strike ten out of twelve bites. I think myself that the great secret in missing fish is on account of the toughness of the paste; and I should certainly consider that he can be but a very poor roacher who could not only catch his fish, but know how to make his paste. Roach-fishing in the Lea is not as it used to be: the great difficulty now is not in striking the fish, but in getting them on the feed.

---

* A work every angler should read.

Can any friend give us poor Lea roach-anglers the tip to get them "on"? We should soon prove the contrary to "M. A.'s" statement. I daresay at first we might miss a few on account of the stiffness of our arms, but that would improve in a very short time, and he would be, as our friend "Anti-Theory" states, but a very poor specimen of a "roacher" who could not hit his fish ten times out of twelve.—I am, &c., J. F. Waters.

STRIKING ROACH.

Sir,—I am not by any means a "crack" roach fisher, but know how to hit a fish pretty well, and quite agree with "Anti-Theory" that to miss four out of six knocks in fishing with paste is not only enough to make your hair stand on end, but to turn grey.

I should certainly give up the sport and take to something else if I were to miss fish in that way. I manage, as a rule, to hit eight or nine fish out of very dozen fish; but I have frequently watched some "Lea cracks," who rarely, if ever, miss one in two dozen knocks.—I am, &c., E. W. A.

FEATHERS, FLIES, &c.

Sir,—Referring to "Arncliffe's" note regarding blue game fowls, although "Blaine's Rural Sports" distinctly states that South Wales is the place *par excellence* for obtaining fowls of that breed, I, although a resident in the principality for some years, have failed to meet with the variety.

Perhaps some of your Welsh correspondents will place us right on the subject. Local fly-tiers, both professional and amateur, use the Spanish or Andalusian blue hackle for winged flies, and coot or dotterel for buzz, and disclaim all knowledge of the blue game—unless, indeed, it is the hackle tinged with brownish or brassy edges, and these I consider are very unsuitable for tying the blue dun, yellow dun, and other flies requiring pure blue hackles.

"Arncliffe" asks for information of the red caterpillar. I find the most killing method for using Foster's particular dressing for trout is by sink and draw, working it up and down close under the banks in deep pools, especially when the river is full and slightly coloured. I sometimes stick a gentle on each of the hooks, but I do not think they are particularly advantageous.

I have not done much with it, as I seldom use it; but I remember one afternoon last season getting nine fish rather above the average size with it, when I could do nothing with ordinary flies. The water at the time had a slight brown hush on it from mine pollution.

In hot weather and low bright water it is to me useless; but perhaps I do not know how to use it.

As it was my query that drew from Mr. Hall his very clear and instructive letter on dressing on the eyed-hooks, allow me to thank him most cordially for it. I, too, have seen some of his handiwork in fly-dressing, and all I can say is, I would give my best rod to equal it.

As "Arncliffe" has some dotterel feathers to spare, will he sell me a few? I have nothing to offer him in exchange. If it is blue Andalusian pullets he requires, I will tell him where to get them, or eggs, if he will write me, and I have no doubt but that you will, sir, kindly forward his letter to my address.

Good furnace hackles I find exceedingly rare—I mean those more particularly with the black-tinged edges. These are indispensable in dressing the fatal coch y-bondhu with us. The ordinary kind with the black middle are common enough. I would remind you of the letter you have for me, and herewith send my postal address. I thank you in anticipation for your courtesy.—I am, &c.,

Cardiff, Nov. 26, 1882. Bittern.

THE BATTLE OF THE STYLES.

Sir,—This time I must beg to differ with V., who is enthusiastic upon the Thames style of fishing in opposition to the Trent style, his main argument being the advantage in handling and manœuvring his bait, and delicacy to be obtained in the actual feel of the line when playing a fish. Now, I must claim that the Nottingham mode is as capable of manipulating the bait, particularly the various artificial baits so often used, as the Thames method, and I think many well known anglers will bear me out. As to the question of playing one's fish, I fancy there are many occasions when the Thames fisherman would give much for his line to be snugly coiled upon his reel than dangling about his feet, or mayhap scorching his fingers beyond endurance during the first and succeeding runs of a good Thames trout or large pike. I am also satisfied that during a long day's fishing the Nottingham disciple will certainly excel the Thames man in his number of casts by reason of the line not becoming entangled so frequently, if at all. Your correspondent says that your Fishing Gazette Tournaments prove the superiority of the Thames method, and he samples the distances cast by the professionals. His argument fails when he applies his test to the amateurs, and had he compared the competitions where the Thames and Nottingham styles met in actual rivalry he would have found that the Nottingham exponents secured both prizes for accuracy and distance. Probably this goes for nothing, as the excitement and novelty of the situation might affect some men more than others—still there is the fact. No doubt "Secretary" was wrong in suggesting a man spinning (Nottingham) should turn his back to the position he is going to fish previous to actually throwing. He should most decidedly keep his eye upon the spot, and let his skill manipulate his rod ready for the cast sideways or overhead.

Now, sir, to summarise: I am bold enough to say that before many years are past the Thames method will be ignored, if not forgotten; that all anglers should practise to acquire the Nottingham style (I know it takes a long time); they will then be able to fish anywhere and for any fish, and as Mr. Martin ("Trent Otter") says in his book you referred to last week, they will be able to fish *fine and far*—far finer than the Thames man, who cannot use an undressed fine line, and with practice they will feel they may become almost as accurate and independent as the fly-fisher, and experience the same delightful feelings of an angler who wants no boat or level platform to pursue his much-loved pastime.—I am, &c., Thames Nottingham.

SPINNING FOR PIKE—NOTTINGHAM v. THAMES STYLE.

Sir,—I read with interest the article "Discussion at our Club," in the Fishing Gazette for Nov. 18, and endorsed every line of it with the exception of the position of the hands when throwing: the left hand must be above the reel, and the right hand immediately below it, the forefinger acting as a "brake" on the outer rim of the reel, and so prevent its over-running itself and causing an entanglement, which all young beginners are apt to experience. I have also read this week the imaginary conclusion of the discussion by your correspondent "V.," and I maintain that either on the bank, wading, or in a punt the Nottingham style is not only the most effective but more graceful. You may also make fully two casts while the Thames fisherman is making one. I also maintain that you can with your rod when spinning in the Nottingham style impart equally as graceful leaps and dashes to your bait as your Thames fisherman can. I remember some short time ago spinning from a boat in the company of a gentleman who used the Thames style. The result was five fish to me and one to my friend, who was continually getting his line entangled either in the boat bottom or by the line catching some obstacle as the bait was being thrown out, or he either threw too hard for the amount of line he had coiled out, or he did not throw half hard enough, and could not recover the line until the bait was fast on the bottom.

In casting the bait from the reel you must incline your head and body sideways, but not necessarily turn your back upon the place you wish your bait to alight.

I admit that at the F. G. tournament the distances thrown in the Thames style were further than the distances thrown in the Nottingham style; but I think forty yards is quite far enough for all practical purposes.—I am, &c.,

York Sher.

FISH CREELS, &c.

Sir,—Would you, or any of your subscribers, kindly inform me through your valuable journal of the best way of keeping fish distinct from food, tackle, &c., in a rather large basket, as I do not like the usual way of putting fish in a bag and then in your basket, as the fish can't readily be seen, and at the same time I don't think it looks "nice"?—I am, &c. Crystal.

Bristol.

[We never keep the tackle and lunch in the same creel with the fish, but carry them separately in a light leather bag, hung over the other shoulder. "Crystal" should have wo light tin compartments made to fit, one at each end of his creel, leaving space for the fish in between—this will keep the food from getting a fishy flavour, and the tackle-book, &c., from dirt. Fish keep best in a perfectly air-tight creel, and for next season we are thinking of having our creels lined with waterproof canvas. We abominate all bags for carrying fish; if you happen to slip and come down on the bag you spoil your fish to a certainty, and it is the same in travelling—the fish get mashed up fearfully if carried in a bag. The north-country wooden box is the best thing, but it gives an angler the appearance of a milliner's assistant. We think the French creel, made waterproof as we suggested, will be *the* thing.—Ed.]

FISH AT THE AQUARIUM.

Sir,—I must apologise for the delay in answering your note with the enclosed. As I daresay you observed when you saw the black bass, they were more or less injured on the tip of the under lip, caused by the violent rolling of the ship during the heavy weather experienced by the ship during their passage across the Atlantic.

In every case of injury, whether in confinement or in a state of nature, fish, in my experience, are always attacked by what appears to be a fungoid growth; if they survive the injury, they cast off this fluffy appearance, as have done the whole of the black bass here, with one exception, and that appears to have commenced this process.

All the fish sent to me by the Marquis of Exeter are in good health and feed well, with the exception of one which died an hour after arrival. I have every reason to believe that I shall be able to keep in as good health and as successfully the black bass as I have the Thames trout, which have now been here so many months in perfect health, and which are the admiration of all who understand fish who see them. If your correspondent would care to see the trout spawned in the course of a few weeks, and will send me his name and address, I shall probably be able to convince him that fish may be kept in confinement, and that not in the wretched condition which he seems to infer.

Of the forty-two carp kindly presented by Sir Robert Harvey, M P., last February, I have not lost a single specimen; but one of the disadvantages of associating aquaria with places of amusement is that some of the visitors dine before viewing the fish.—I am, &c., John T. Carrington.

WEIGHT OF GRAYLING.

Sir,—Can you inform me the greatest weight grayling attain in this country? I have caught them at Lössæt in Norway 8 to 10 lb. in weight. Do they run to as much here.—I am, &c., J. Hewetson.

Putney.

[A five pound grayling is a great rarity in this country.—Ed.]

A LEGAL QUERY.

Sir,—In reference to Mr. R. Woolfall's question, the 7th and 8th of George IV., cap. xxix., sec. 35 enacts, "That if any person shall at any time be found fishing against the provisions of this Act, it shall be lawful for the owner of the ground, water, or fishery where such offender shall be found, his servants, or any person authorised by him, to demand from such offender any rods, lines, hooks, nets, or other implements for taking or destroying fish which shall then be in his possession, and in case such offender shall not immediately deliver up the same, to seize and take the same from him for the use of such owner. Provided always that any person angling in the daytime against the provisions of the Act, from whom any implements used by anglers shall be taken, or by whom the same shall be delivered up as aforesaid, shall, by the taking or delivering thereof, be exempted from the payment of any damages or penalty of such angling."

I cannot say if this Act has been repealed, or others have been made; if not, it is certainly illegal to convict after the rod and tackle have been destroyed or delivered up.

It is much to be regretted that some "anglers," when told that they are trespassing or that the fishing is preserved, reply with insolence and, in some cases, blackguardism, instead of a polite apology, and thus all are made to suffer for the faults of a few. It is easy, except in rare cases, to obtain information about fishing, and whether preserved; also if leave is likely to be granted. If information cannot be obtained, civility costs nothing, and often ends in an invitation to continue fishing. Much damage is often done to hay, crops, &c., by the "thoughtlessness" of anglers, and one can hardly be surprised that permission is so seldom obtainable.—I am, &c.,

Dalston. C. T. Padfield.

MANCHESTER AND DISTRICTS AMALGAMATED ANGLERS' ASSOCIATION.

Sir,—Just a line in reply to Mr. Ashworth's letter of last week. In it, he says the trout weighed in January last is the only instance when this class of fish has been weighed in for a prize during close season. Does that mean that they allow rough fish to be weighed in during close season—as I know they have no rule to the contrary? As to my not writing till October, I will explain. The subject of this particular trout being taken out of season was brought before the delegate meeting in January last and left over till April. At the April meeting Mr. Ridgway's notice of motion was given; at the July meeting Mr. Cribb's proposition was carried. This, of course, appeared on the minutes, and as the secretary is generally very late in sending them out—I did not know what had been done till October 1, and then I thought I was perfectly justified in writing to the Gazette. I may also say that I am no renegade from either his or any other society, nor have I any private grievance, nor do I wish to bring his society into disrepute, as I consider they have already done that for themselves.

With regard to the 6 oz. jack, I think Mr. Ashworth is trying to guess who I am, and his guessing appears to be as far from the mark as his replies to my letters. I may say that up to March last I had never saw the water, consequently I could not have taken the jack, and his letter is the first intimation I had of one being taken.

As to Mr. Ashworth's members not being ashamed of anything they have done, I should only be surprised if they were, as shame seems to be a scarce commodity with them. I don't understand why Mr. Ashworth should object to my signing myself "Trout," unless it is that, unlike the other trout, I have not been caught. But so long as my opinions are right, I shall not be ashamed of signing myself Trout.

Nov. 28, 1882.

THE RAVENSBOURNE.

Sir, I notice in your last Gazette a mention of the Ravensbourne River, and recollect many years ago I used to fish in it, and killed fine trout about Catford Mill and above, and all the coarse fish—dace, roach, &c.,—were of the finest kind from any river I ever fished.

It takes its rise from the same source as the Wandle, and would yield the same results, if taken up by our energetic London anglers, and can be made one of the best trout rivers in England. It is some miles long, and may be worth an enquiry.—I am, &c., Fly-Fisher.

November 30.

SALMON ANGLING ON TWEED AND TEVIOT.

In consequence of heavy rains both rivers came down in full flood on Wednesday week, the gauge at Kelso Bridge registering fully four feet of flood water, thus putting a stop to angling for the time being. So quickly, however, did the river subside, frost having again set in, that anglers recommenced operations on Friday, notwithstanding the fact that the colour of the waters was much against success. Reverting, however, to Tuesday, the 21st, we may state that the Earl of Howe, on the Birgham water, killed six salmon; the whole of the fish being got after half-past twelve o'clock, and the weight of which were, 29½, 25, 18, 17, 17, and 15 lb. respectively. On Friday, on the Junction water, Mr. Drummond, Ednam House, killed three salmon, the weights of which were 21, 18, and 15 lb. respectively. On the Hendersyde water, the same day, Sir George Waldie Griffith had a brace, and a similar number was killed by Captain Griffith on the under Hendersyde water. On Saturday the rivers were still very full, and of a really bad colour; and on the deep-water "casts" angling was almost impossible; but, strange to say, that veteran angler, Mr. Denison, fishing on Birgham Dub, had excellent sport, killing five salmon, the weights being 30, 24, 20, 20, and 20 lb. respectively. Taking into consideration the heavy state of the water, and also its "snow-broo" colour, this take was certainly something astonishing, the more so as all the other waters in the neighbourhood were fished blank, with the exception of Ednam House (Junction) water, where Mr. Moffat killed a brace of salmon, one 24 and the other 18 lb., while only one of 20 lb. was killed on Sprouston water by Mr. T. Pringle, fishmonger. This take stamps Mr. Denison as one of the most expert salmon anglers who ever handled rod or threw line over the monarchs of freshwater. The elements on Monday were rather more favourable, and fair sport was got on all the "casts." On Birgham Dub Mr. Denison had three, 20, 18, and 17 lb. On Floors lower water Mr. Walker, Scarborough, got a brace, 31 and 19 lb.; while on Floors upper water Mr. Forrest had a similar take, 15 and 16 lb. On the upper Hendersyde water the same day Sir George Waldie Griffith had one, and on the Hendersyde water Capt. Griffith killed one, and on the upper water Colonel Beden one of 24 lb., while Mr. Somervaille, Edinburgh, on the Sprouston water killed a beautiful grilse of 9 lb. On the Ednam House water, the same day, Mr. Drummond had a 15 lb. salmon. Tuesday was a good day for angling, and sport was fair all round. On the lower Sprouston water Mr. Caldwell had one of 20 lb., and on the Hendersyde lower water Sir G. W. Griffith a brace, while Capt. Griffith had three on the Hendersyde water. Mr. Moffat fishing on the Junction water, had three, 25, 20, and 18 lb. On Birgham Dub Mr. Denison killed four salmon, 20, 19, 17, and 14 lb.; he also landed a kelt, which was returned to the river. Mr. Walker, on Floors lower water, got a brace, 19 and 20 lb., and on the upper water Mr. Clapham, Broomhouse, Dines, killed four, heaviest 20 lb. On Tuesday, on Birgham Dub, Mr. Denison killed a brace, 20 and 16 lb. On Floors lower water Mr. Goall, Kelso, had a pair, 22 and 17 lb., and on the upper Floors water, Mr. Walker, Scarborough, killed five fish, the heaviest weighing 25 lb. On the Junction (Ednam House) water Mr. Drummond killed one of about 20 lb., and lost three others. On the Teviot Mr. Adam Lamb, Kelso, had a couple of salmon, the heaviest being about 20 lb. In the Galashiels district, on Friday, on the Fairnilee water, Mr. Cape had one 24 lb., and Mr. Robert Shortreed, on the West fishings, had one the same weight. The rod salmon angling season closes to-day, and a *résumé* of the season will appear in our columns shortly.—Maxwell, Kelso, Nov. 30.

THE GRESHAM ANGLING SOCIETY.

This society met on Tuesday last; Dr. Defreiz in the chair. The secretary announced that a specimen pike of 16½ lb. had been weighed in by Mr. G. R. Hunt, a statement that was warmly applauded. During a pleasant discussion upon angling topics, Dr. Brunton produced some hooks made specially for him, from his instructions, by Messrs. Hutchinson and Son, of Kendal. The peculiarity of these hooks lay in the nature of their points, which are bayonet-shaped, giving them, it was explained, a penetrating power over all other hooks. The idea, or principle of action, was taked from the triangular-pointed needles used by surgeons and glovemakers. No one would suppose how difficult it was to pierce skin with a round needle till they tried it, or, on the other hand, how easy it was to do so with a surgical needle, as was demonstrated by experiments on a leather glove, much to the surprise of several of the gentlemen present. Dr. Brunton narrated some of his experience with hooks so pointed, stating that if the hook touched the fish it was sure to penetrate, the wound made by the point greatly facilitating the passage of the hook beyond the barb, or its "barbing," as commonly called. Notice has been given of a special meeting on Tuesday, December 19, to consider Mr. Parker's resolution that life members and country members be admitted to the society. Dr. Brunton will read a popular scientific paper before the society on Tuesday next, at Masons' Hall Tavern, "On the Special Senses of Fishes," the paper being illustrated by diagrams; the chair will be taken at 7 p.m., and all anglers interested are welcome to attend. Mr. T. R, Sachs attended as a visitor on Tuesday last, and was very cordially received. The treasurer and secretary were present at a large gathering of anglers on Thursday evening, November 30, held at the club-house of the South London Angling Society, one of the oldest and best societies south of the Thames.

FACEACHE, TOOTHACHE, PAINS IN THE GUMS, NEURALGIA. —Adam Smith's Neuralgine is a Certain Cure. Bottles, 1s. 1½d., 2s. 9d. Post free from Proprietor, Chemist, Wednesbury. London Agent, W. Edwards, 157, Queen Victoria Street; and all chemists.

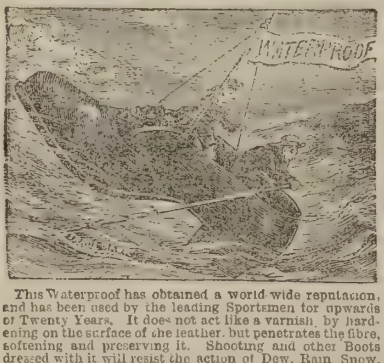
Torcross is about 20 miles south of Torquay—the mildest climate in England for winter fishing.

FISHING & SHOOTING SEASON

NO SPORTSMAN should leave for the RIVERS OR MOORS without having his Boots dressed with

STRAWSON'S WATER-PROOF.



This Waterproof has obtained a world-wide reputation, and has been used by the leading Sportsmen for upwards of Twenty Years. It does not act like a varnish, by hardening on the surface of the leather, but penetrates the fibre, softening and preserving it. Shooting and other Boots dressed with it will resist the action of Dew, Rain, Snow, and Sea Water. It is especially good for keeping the Soles of Boots and Shoes Waterproof, increasing the comfort of the wearer by its softening effects on the leather, helping to prevent blisters and chafing to the feet.

All Classes who are exposed to the many changes in the weather should use it as a matter of economy in preserving their Boots, and preserving their health, by keeping their feet dry.

Opinion of a well-known Angler—

"I have often stated (and always asserted in my books) my belief that your Waterproofing is the BEST IN THE WORLD for sporting purposes, and indeed the only one which will keep out Melting Snow."

Yours truly, H. CHOLMONDELEY PENNELL.

Sold Retail by all Boot and Shoe Makers, Saddlers and others
in Tins, price 2d., 4d. 8d., 1s., 2s., 5s. & 10s. each.

Ask your Boot Maker or Saddler to procure it for you, or send Stamps for the price of a Tin to the Proprietor, who will forward a Sample, carriage free, to any address.

Important Offer to the Readers of THE FISHING GAZETTE.

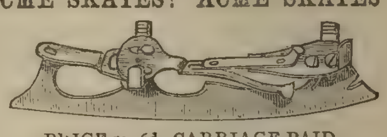
SKATES! SKATES!! SKATES!!!

AT PRICES TO SUIT ALL.

THE extreme mildness of last winter, and the consequent depression in the Skate trade, enabled us early in the spring of the present year to purchase for CASH a Manufacturer's stock, comprising 5000 pairs, at a price never before known in the English markets, and we now offer them to the readers of this journal at an unprecedentedly low price; and, in order to effect an immediate clearance of the entire stock, we have made special arrangements with Messrs Sutton and Co. to send all parcels CARRIAGE PAID. This, we feel sure, will meet with the cordial support of the thousands of readers of the FISHING GAZETTE who have hitherto favoured us with their patronage.

CONDITIONS OF SALE.—As soon as you receive the Skates, if not well satisfied with your bargain, write to us, and we will return you the money.

ACME SKATES! ACME SKATES!!

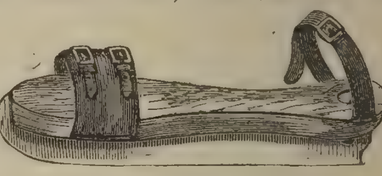


PRICE 5s. 6d., CARRIAGE PAID.
If stamps, 3d. extra.
Sizes—8½ 9, 9½, 10, 10½, 11, and 11½ inches.
All Sizes one Price.

The above pattern is too well known to require either description or comment. We need only say that they are of A1 quality, warranted steel blades, best finish and workmanship, and we guarantee them equal to any Skates usually retailed at half-a-guinea per pair.

Very superior quality ditto, beautifully nickel-plated, price 10s. 6d. per pair, carriage paid.

Hard Polished Wood, with Broad Toe Strap.



PRICE 3s. 6d. CARRIAGE PAID.
If Stamps, 3d. extra.
Sizes—8, 8½, 9, 9½, 10, 10½, 11, and 11½ inches.
All Sizes one Price.

This is our speciality in Wood Skates, and they are a marvel at the price. Each pair is polished all over, and fitted with two broad toe and heel straps, made of best leather and hand-sewn. The blades are well steeled, and in appearance and wear are unequalled by those costing treble the money.

This pattern can also be had in polished Walnut, with brass toe caps, and fitted with best leather straps. Price 5s. 6d., or 69 stamps, carriage paid.

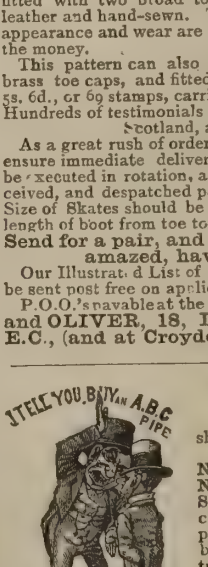
Hundreds of testimonials from all parts of England, Ireland, Scotland, and the Continent.

As a great rush of orders is expected, early application to ensure immediate delivery will be necessary. Orders will be executed in rotation, and when possible same day as received, and despatched per Sutton and Co., carriage paid. Size of Skates should be ascertained by measuring the full length of boot from toe to heel.

Send for a pair, and if you are not satisfied and amazed, have your money back

Our Illustrated List of Skates and other Specialities will be sent post free on application.

P.O.O.'s payable at the G.P.O., London, to **DRALLIM and OLIVER, 18, Ironmonger Lane, London, E.C., (and at Croydon).** Please mention this Paper.



I TELL YOU BUY AN A.B.C PIPE
AND DON'T YOU FORGET IT!

The Fishing Gazette.

SATURDAY, DECEMBER 9, 1882.

A HINT TO THAMES ANGLERS.

WE earnestly ask all anglers who fish the River Thames to read the first letter in our Correspondence columns this week. It is from an angler who himself is ever ready to support any good cause by his contributions. That there should be only too much need for such a letter, is a thing which Thames anglers ought to be ashamed of. We venture to say that Mr. Thomas Spreckley himself, in addition to the immense amount of work and time which he so willingly gives, also gives from his own purse more towards the improvement of Thames angling, than do all the anglers and angling clubs of London put together. Is this fair? No; and we must all come forward and show him by our subscriptions that we appreciate the work he has done, and intend to support him in carrying it on even more extensively.

SCOTCH FISHERIES IMPROVEMENT ASSOCIATION.

INTERIM REPORT BY THE COUNCIL TO THE MEMBERS OF THE ASSOCIATION FOR THE HALF-YEAR TO NOVEMBER, 1882.

MR. J. BARKER DUNCAN, Hon. Sec. of the Association, has sent us a copy of the half-yearly report, from which we make the following extracts :—

As formerly, the Council of the Association have though it proper to submit an Interim Report against the half-yearly meeting of the members, though such is not required by the rules.

Membership.—The number of members (individual and corporate) continues at 160. The council regret the retirement from the Association of Sir James R. G. Maitland, Bart., who, whilst one of their number, was most active in promoting the objects and interests of the society. Sir James placed the society under special obligation at the time their first report was issued, by kindly allowing his Norwich Prize* Essay on the Salmon Disease to be printed and circulated along with that report. By the deaths of Captain N. S. Kennedy, of Allerton, and Mr. Robert Lindsay, Tighvonie, the association has lost two valuable members.

The Scotch Fishery Board.—Since the issue of the second annual report in May last, a very important step has been taken by the present Government. The "Fishery Board (Scotland) Act, 1882, introduced by the Lord Advocate, the Solicitor-General for Scotland, and Mr. R. W. Duff, of Fetteresso, M.P., received the royal assent on 18th August last. It provides for the establishment of a Fishery Board for Scotland, and makes provision for the same taking cognisance of everything relating to its Coast and Deep Sea Fisheries, without inference, however, with existing public authorities or private rights. But what is of special interest to the members of this association is the further provision that the board shall also have the general superintendence of the Salmon Fisheries of Scotland.

* * * * *

When the bill was before Parliament, the council forwarded a memorial to Lord Rosebery and the Lord Advocate, expressing cordial approval of the measure, and respectfully suggesting certain amendments, with the view of improving its efficiency.

Now that the Act is passed, the council are much gratified to find that Scotland is at last to be placed on a footing with England and Ireland by having an inspectorate of its own. The annual report, which will fall to be issued by the board, will be a means of affording valuable information regarding our Scotch Fisheries, and will form a yearly record from which statistics long wanting may be compiled.

It is only needful briefly to advert to the opposition which from certain quarters was offered to the Bill in Parliament. It is believed that this opposition was founded on quite a mistaken understanding of the character of the measure. It is subject for regret that one object gained by the opponents was the exclusion of the Tweed and its tributaries from the operation of the Act.

The council feel that it is due to Lord Rosebery and the Lord Advocate to say that the passing of the Fishery Board (Scotland) Act reflects, through them, the highest credit upon the present administration, inaugurating as the Act does a marked era in the history of the Scotch Fisheries.

The Old Fishery Board met for the last time on Monday, the 16th October, for the purpose of being dissolved in terms of the Act.

* * * * *

Her Majesty's Principal Secretary of State has appointed Archibald Young, Esq., Advocate, Inspector of the Salmon Fisheries of Scotland under the Act. Mr. Young is well deserving of this appointment, having for fifteen years past faithfully and successfully discharged the duties of a commissioner of Scotch Salmon Fisheries, and having during that period acquired a thorough acquaintance with their details and requirements.

Her Majesty has been pleased to approve of the appointment of Captain Dugald Graham of the Northern Lights Steamer "Pharos" to be secretary of the new board.

Amended Legislation.—In the memorial recently submitted to the Earl of Rosebery and the Lord Advocate, by the council of the association, in support of the Fishery Board (Scotland) Bill, the following representation was made:—"That your memorialists being in communication with almost the entire body of fishery associations and angling clubs in Scotland, they feel entitled to express the general opinion of these associations and clubs, in suggesting that fresh water trout should be taken cognisance of in some form in the present Bill, so as to bring this class of fish under the superintendence of the board along with the salmon-fishings. In Scotland, where there are numerous rivers and lakes well suited for the breeding and nurture of non-migratory trout, and, in many instances, wholly unfrequented by salmon, no statutory protection of any kind exists, and no close time is fixed."

---

* A £10 prize given by the Editor of the FISHING GAZETTE.

In the returns obtained by the council, in 1881, from Scotch angling clubs and associations, all were unanimously in favour of an annual close time for trout.

Now that Scotland has an inspectorate of its own, there can be little doubt that before long proper protection will be given to trout, and a fence time fixed by law, a consummation as devoutly wished for by English as by Scotch anglers.

Fish Culture.—This science is rapidly advancing and becoming more widely known in Scotland. Many millions of trout ova are now annually incubated at the Howietoun Fishery,* Troutdale Fishery, and Solway Fishery. The Tay commissioners still annually turn into the river Tay many thousands of smolts, and the council are informed that the Tweed commissioners have been making inquiries as to the probable cost of the erection and management of an establishment for hatching a million of salmon ova annually in connection with the fisheries in the Tweed. In August last the District Board for the river Forth had some 13,000 salmon fry turned into the Teith, near Ochtertyre, the eggs having been incubated at the Howietoun Fishery. Amongst other stocking operations, it may be mentioned that Messrs. John Anderson & Sons, Edinburgh, have, during the past winter, incubated some 40,000 to 50,000 eggs in their hatching-house at Cobbinshaw Loch, the fry from which were turned into the loch in the course of the spring. The hatching-house, which was erected some three years ago, has now been enlarged, so as to provide for the incubation of 150,000 eggs annually.

As showing what angling clubs may do in this direction, Mr. John Clark, Secretary of the Echaig Club, Glasgow, reports as follows:—"The operations in salmon hatching at Benmore, Kilmun, have been carried on for the last few years with very marked results, not only in the greater number of salmon caught, but in the increased weight of the fish. Prior to the first introduction into the hatching boxes of ova from the Tay, the grilse usually caught weighed about 3½ lb., rarely exceeding 5 lb., salmon weighing about 7 lb. Now we seldom get a grilse under 5½ lb., whilst the heaviest salmon caught this season weighed 18½ lb. In Loch Eck, fish have been taken with the net weighing nearly 30 lb. We turned into the river this spring, after the umbilical sac was absorbed, about 80,000 young salmon from Tay and Tweed ova."

The Lochleven Angling Association have placed in the loch 3000 two-year-old trout, besides turning into the Gairney—one of its feeders—some 50,000 fry. It may be mentioned that the directors of this (the Lochleven) association have resolved to erect hatching-ponds in connection with the loch.

* * * * *

In England, angling clubs and associations have of late been leasing and stocking waters. In Scotland, it is thought this might also be done with immense advantage, seeing that from wholesale and unsportsmanlike capture of fish, pollutions, &c., our streams have been, and are still being, notoriously depleted. Why, for example, should the reservoirs of our Water Trusts and Municipal Corporations not be more largely stocked than they are? Mr. Byram Littlewood, of Huddersfield, a well-known English pisciculturist, has, it is understood, turned into the Huddersfield Corporation Reservoirs, at various times during the last five years, somewhere about a million of different kinds of trout and char. In large bodies of fresh water, animal life, in the shape of insects and grub, more or less abounds; and the presence of fish, especially trout and char, is known to improve the water by keeping down such. The Paisley Water Commissioners have, it may be stated, let the fishings of their various reservoirs to parties resident in the Burgh, who have formed themselves into angling clubs. In some cases the leases have been for periods of years, and in other cases simply annual tacks. The lessees attend to the stocking, and in one of the largest reservoirs have placed some 5000 young fish.

In the vicinity of Edinburgh there are some thirteen reservoirs, which supply the city with water. Why should these, or some one or more of them, not be leased by the Edinburgh angling clubs, or a united association of these clubs, and systematic stocking be followed out? Indeed, why should the Water Trustees, recognising the salutary effect of the presence of trout and char, not make a special grant each year for the proper stocking of their several waters? Annual expenditure would no doubt be recouped by the issue of angling licences, at say 2s. 6d. or 5s. each, for the year, and under restrictions as to the size of fish allowed to be taken, the lures to be used, &c.

Under the control of the Edinburgh and District Water Trust, there are 13 fine reservoirs, with a combined area of 1122 acres. What splendid fishing these might most easily be made to yield!

* * * * *

Angling Clubs.—A number of angling clubs and associations have been formed during this year, and the council are now in communication with about ninety of such societies in the various districts of Scotland.

Fish-Passes.—The council feel that the subject of fish-passes is one that touches closely upon the improvement of Scotch Fisheries.

* * * * *

Pollution.—The prevention and curing of pollution in our rivers and streams is another important object of this association. When skilled chemists have reported that there are ways and means of obviating disastrous results of this kind, there can be no excuse for offences so distasteful and wanton, besides being so hurtful to public interests.

* * * * *

Fishery Exhibitions.—In quick succession to the recent International Fisheries Exhibition at Edinburgh, a Maritine Exhibition was opened at Tynemouth, on 6th September last. The chief departments of exhibit were naval architecture and marine engineering; although there were also departments for fisheries and life-saving and coast-lighting appliances. The exhibition was continued open to the 14th of October, and was very largely visited—the total number admitted being somewhere about 250,000. Like other exhibitions of the same class, it has been a financial success, the committee having announced that they are able to predict a substantial surplus.

But all exhibitions that have hitherto taken place in the United Kingdom must be held as only preparatory to the Great International Fisheries Exhibition, to be held in London in 1883. A prospectus has been issued showing how powerfully the scheme is to be supported—Her Majesty the Queen being chief patron.

In every division of the catalogue, England will, it is understood, be fairly represented. From Scotland there is (as yet) to be only a partial and limited collection, and a want of representation exists in the principal interests of the Scotch fisheries. Of course, it is not too late for this to be remedied by any society, committee, or other agency, capable of gathering together a representative collection for national and philanthropical objects.

If a committee for Scotland were to be successful even now in procuring a fully representative collection, the London committee would no doubt be both willing and glad to provide room for it.

* * * * *

Salmon Disease.—This scourge still exists. Many thousands of fish have been killed by it during several past years in the Tweed, the Tay, the North Esk, and in other Scottish rivers, including those flowing into the Solway Firth.

In the twenty-first annual report of the inspectors of fisheries for England and Wales, issued in April last, Professor Huxley, at very great length, treats of the character, symptoms, and effects of the disease.* The fungus which grows on diseased salmon is known to be a species of the genus *Saprolegnia*, and it is commonly identified with *S. ferax*. The *Saprolegnia* appear to be "a kind of water moulds, which usually live at the expense of dead and snbmerged animal and vegetable substances, and are specially common upon dead insects," &c. The report, amongst other things, states that "the disease appears to be a purely cutaneous affection, and the fish seem to die partly from irritation and consequent exhaustion, and partly perhaps from the drain on the resources caused by the production of so large a mass of vegetable matter at their expense."

* * * * *

New Fishery Districts.—In September last, the bye-laws requisite to bring the Orkney Islands under the scope of the Salmon Fishery Acts of 1862 and 1868 received the sanction of the Secretary of State; and it is understood that the bye-laws for erecting the Shetland Islands into a fishery district have been drawn up by the commissioners of the Scotch Salmon Fisheries, and will shortly be submitted to the Home Office for the sanction of the Secretary of State.

On behalf of the council,
J. BARKER DUNCAN, Hon. Sec.
6, Hill Street, Edinburgh, November, 1882.

At the half-yearly meeting of the association, held in Edinburgh, on November 30, Mr. David Milne-Home in the chair, the report was discussed, and some valuable suggestions made in connection with questions referred to in it by the chairman, Mr. T. G. Murray, Dr. C. Bell, Mr. Handasyde, Mr. Johnston, Mr. Gordon Mason, Mr. Archibald Young, Principal Williams, the Hon. Secretary, and other gentlemen.

As we said when noticing the first report, this young but energetic and flourishing association is doing a most valuable work, one which cannot fail to prove of immense advantage to the interests of the important Scotch Inland fisheries. In wishing the Association every success, we know we are only expressing the feelings of all English anglers; as also that Scotland will be worthily represented at our exhibition next year.

NEW FISH FARM ON THE TAY.

We learn that the Tay Fishery Board have just completed the erection of a salmon hatchery, after the model of Sir James R. Maitland's famous one at Howietoun.

The Weather and the Birds.—Owing, no doubt, to the recent tremendous storms raging along our coasts, and rough weather, many of our rarer sea and aquatic birds have been driven inland. Several were found in the fens lately, especially Isleham and Burwell fens. Amongst the specimens found were several Guillemots, two red-throated divers, several Shearwaters, one Skua Gull. This morning from Isleham fen a beautiful Little Ouk (Murgulas Melanoleucus), and on the Newmarket heath several gulls have been picked up almost dead from exhaustion. Most of the specimens have been sent to Mr. Wm. Howlett, naturalist, of Newmarket, to be preserved.

---

* This is now the largest Piscicultural Establishment in Europe, producing upwards of twenty million trout ova yearly.

* Reference is also made to the Report on the Salmon Disease by Messrs. Buckland, Walpole, and Young, of date 22nd August, 1880.

THE TEES SALMON FISHERY.

IMPORTANT MEETING OF ANGLERS.

A MEETING of anglers and licencees of the River Tees Salmon Fishery, convened by Mr. W. A. Wooler, of Sadberge Hall, was held in the lecture room of the Central Hall, Darlington, on the 28th ult., for the purpose of discussing the best means of ameliorating the baneful effects of "hush" in the river Tees; the better watching of the river and tributaries; and other important matters affecting the general interests of the fishery. There were present anglers from various parts of the district, amongst whom were the following:—Mr. W. A. Wooler, Sadberge Hall; Messrs. F. Mewburn, T. M. Barron, Geo. Webster, W. Lascelles, Darlington; J. B. Ramsay, Gainford; W. Sang, Barnard Castle; H. Wright, Yarm; A. Moses, J. H. Moses, W. Sewell, W. E. Brown, E. Hutchinson, R. A. Luck, J. W. Law, J. Bamlett, Darlington; J. Winteringham, Croft; T. W. Deighton, Stapleton; W. Russell, D. Brebner, J. Teesdale, J. Durham, W. Lear, Darlington; Mr. Wilson, Coniscliffe; R. Byers, Croft; C. Eade, &c.

On the motion of Mr. T. M. Barron, seconded by Mr. G. Webster, Mr. W. A. Wooler was unanimously elected to take the chair.

The Chairman, in opening the meeting, remarked that it would be unnecessary for him to say much with regard to the important subject which had brought them together. He had taken the liberty of asking their presence on that occasion in the belief that it was high time something was done to protect the interest of so important a body. In the first place, the baneful effects of the hush from the mines and quarries in the upper reaches of the river Tees had been felt by all of them. This should be and, he contended, could be remedied. (Hear, hear.) The Duke of Rutland, at his mines in Derbyshire, had provided a remedy, and it was stated that the water went out very clear into the adjacent river. If so much had been accomplished in Derbyshire, the same could be surely done in Durham by providing ample subsiding tanks. The artificial hatching and rearing both of salmon and trout and—if they thought it desirable—grayling was also one of the most important subjects that could possibly claim their attention. These and other matters he wished them to consider well; but he was quite certain of this, that the Tees would never take that high position it was entitled to take unless they adopted some system of hatching and rearing fish. He suggested the advisability of forming themselves into an association, of passing such resolutions as they thought desirable, and of ultimately appointing a deputation to wait upon the Board of Conservators at their next meeting with a view of making known their wants and grievances. If that deputation was both numerous and influential, he felt sure a good impression would be made upon the Board. (Hear, hear.)

Mr. G. Webster (Darlington), said he had fished in the river Tees for nearly twenty years, and had had personal experience of the baneful influence of "hush." It was in short the bane of all anglers, as every one present would admit. (Hear, hear.) One of the first questions an angler asked before he went out fishing was whether there was much hush in the river. The influence this hush had upon fish was that it prevented them from feeding, and therefore under its influence they did not rise and take the bait. Hush, as they all knew, was produced by the refuse from the lead mining industries in the higher reaches of the Tees, and that people on the lower parts of the river should therefore have to suffer was most unfair.

Mr. T. M. Barron seconded, observing that nothing was more disgusting to the angler than to find the river full of hush, and it was astonishing how very small a quantity prevented the fish from feeding. (Hear, hear.) He contended that it was unfair that the anglers of the district should be called upon to pay the sum of 25s. for the privilege of angling in something very little better than a ditch. (Hear, hear.) The past had been about the worst season for fishing he had ever known, and although this might to some extent be due to other causes, it was in a very large measure attributable to the existence of so much hush in the river.

Mr. Wilson (Coniscliffe) said he was in a position to corroborate all he had heard as to the injury done to the fishery by the existence of hush, but he thought there was one defect in the statements put forward which it would be well to face. They were well aware that the principal lead mining company in the upper reaches of the Tees was a very old-established concern, which, in the absence of any legal knowledge, he should almost think had derived a prescriptive right, by virtue of their long establishment, to foul the water if it should suit them to do so. (No, no.) But, again, it was their duty to regard the interests and feelings of others; and as the London Mining Company had for many years past been struggling against great difficulties, they ought to bear these facts in mind. (Hear, hear.) He did not wish to discourage that meeting in the slightest degree; at the same time, he did not desire that anything should be done to materially injure the interests of an industry on which the livelihood of so many persons depended. He was in favour of all that had been suggested, provided their proposals could be carried out consistently with the interests of rhe industry he had spoken of. (Hear, hear.)

Mr. Sang (Barnard Castle) endorsed such proposals as had already been put forward, and suggested that in the resolution some reference should be made to the stone-chipping nuisance. In some parts of the river, it was impossible to comprehend the injury done to the fishing, notably near Barnard Castle, by the secretion of these chippings. It seemed to him that accumulation of these chippings had caused a very marked deficiency in the food of the fish. Another cause that contributed to the same result was the existence of so many "water ouzles," which were very destructive to the fly and other things that constituted the food of the fish.

Mr. D. Brebner (Darlington) suggested that under the provisions of the Rivers Pollution Act mineowners might be compelled to use every precaution in their power to prevent hush from coming into the river. He knew the difficulties that usually surrounded the proofs attending these matters, but under the circumstances he thought there would be no difficulty in the present case.

Mr. Barron pointed out that the Act referred to simply applied to anything that poisoned the fish; but hush, so far as he was aware, did not poison them, but merely prevented them from feeding.

Mr. Brebner said that a man had recently been poisoned by drinking water polluted by means of it.

After further discussion, in which Dr. Fothergill, Mr. J. B. Ramsay, and others took part, the resolution proposed by Mr. Webster was unanimously adopted.

The subject of watching the river was next introduced.

Mr. T. M. Barron proposed that the gentlemen present should be formed into an association to be called the Tees Angling Association, and that a sub-committee be appointed to draw up a code of rules to be submitted at a future meeting.

This resolution, having been duly seconded, was carried *nem. con.*

Mr. Wooler presented the association with a legal work on the subject of salmon fishery, and the meeting terminated.

[We are delighted to hear of the establishment of this association for the protection of the Tees, and wish it every success. It is a pity the Swale anglers do not combine in the same way, for the Swale suffers terribly from the same cause—refuse from mines. This refuse does not appear to kill the fish directly, though it does so indirectly, by killing the aquatic larvæ on which they exist. But it sickens them and spoils all sport.—ED.]

CLUB AND OTHER JOTTINGS.

By L. B.

THIS (Friday) evening a meeting of the Committee of the Anglers' Benevolent Society will take place at the Foresters' Hall, Clerkenwell Road.

The usual monthly meeting of the United London Anglers' Central Committee was held at the Bald-Faced Stag, Worship Square, Finsbury, on Monday evening last, Mr. S. Morgan presiding. After the reading and confirming of the minutes of the previous meeting, a long and interesting discussion ensued, in which Messrs. Manning, Theobalds, High, Kidd, and others took part, ending in a proposition that the rule passed some years since—"That a member of an angling society leaving the said society in arrears and joining another society, should, in the event of his applying for a privilege ticket, be refused same until he had satisfied the past demands of his late society"—be rescinded, which was carried. Messrs. Ghurney, Morgan, and Bonvoisin then spoke a few words about the coming Great International Fisheries Exhibition, urging the anglers to at once apply for space for the exhibition of their club collections of stuffed fish. The half-yearly balance-sheet, May 1 to November 6, 1882, was distributed. From this it appears that during the six months the association has enrolled three new societies, and issued 1064 railway privilege cards. The expenditure side shows, among other items, a gift of £5 5s. to the Thames Preservation, £10s. 3s. 6d. printing, £14 1s. 4d. for the preservation of the River Lea, including rewards for four distinct convictions, bill-posting, watching river during fence months, bailiffs' salary, Waltham, Edmonton, &c.; the balance in hand and in Post Office Savings Bank amounting to £101 7s. 6½d. The accuracy of the balance-sheet were personally vouched for by the auditors, Messrs. Baylie, High, and Dymond. During the evening Messrs. Crumplen and Bates entered the room and were heartily cheered. Some routine business was transacted, the roll called, after which a hearty vote of thanks was passed to the chairman, and the meeting brought to a close. At the meeting of the West Central Association's Working Committee yesterday week, a new angling society, viz., the Grafton, was enrolled, subject to confirmation at the next general meeting.

A No. 3 District W. C. A. visit was paid the South London Angling Society, George and Dragon, Camberwell Road, on Thursday evening, Nov. 30. Mr. L. Bonvoisin occupied the chair, our old friend Mr. Buck facing him in the vice. The snug club room, the walls of which are well covered with good specimens of the finny tribe, were comfortably filled by representatives of the following societies:—Beresford, Junior Piscatorials, Kennington, United Brothers, Walworth Waltonians, Piscatorial Society, St. Albans, Gresham, Rodney, Good Intent, Great Northern, Silver Trout, and North-Western. Among the singers were Messrs. Head, Hampson, J. Hotham, Grant, Mitchell, Bonvoison, Woodman, Beckett, Watts, J. Fitch, Dawes, and Fox. The toast of the "South London" was proposed by the chairman, who coupled with it the names of Mr. Secretary Palmer and Mr. Field. The toast, needless to say, was drunk with great enthusiasm, and responded to by both those gentlemen in a few well-chosen words. To the toast of the visitors, Messrs. Beckett, Hatfield, Crumplen, Wheeldon, Bates, Hatfield, Stebbings, and Fitch briefly responded. The usual vote of thanks to the chair and vice-chair brought this pleasant and successful meeting to a close.

Mr. T. Hoole, who, I fear, will be confined to his bed for some time to come, writes me this (Wednesday) morning:—"Please put a line in your notes in this week's GAZETTE, urging secretaries to send me full particulars of clubs, correct name, address, meeting nights, secretaries' name and address, ditto, for incorporation in a list I purpose issuing next month, and which I am desirous of making as complete as possible."

A No. 2 District West Central Association visit was paid the Trafalgar Angling Society, George and Dragon, Greek Street, Soho, on Monday evening, December 4, Mr. Humphries ably filling the post of chairman. The attendance was not so good as had been hoped for, but the songs and recitations were capital, making time pass pleasantly, and only too quickly. Among the societies represented were the City of London, Great Northern, Royal George, West Central, North-Western, St. John's, Bloomsbury, Crown, Piscatorial, and the Buckland.

The Thames Rights Defence Committee are about to issue a report, the perusal of which will, let us hope, induce many anglers to support so important a society.

A No. 3 District West Central Association visit will be paid the United Brothers' Angling Society, the Druid's Head, Broadway, Deptford, on Tuesday evening, December 12. The United's club room is a very large one, and capable of accommodating a goodly number, so it is hoped brother rodsters will muster in strength.

"Bites lost in roach fishing." I thank our Editor for the compliment he pays me in asking my opinion on the above knotty question. I have followed the controversy with great interest and much amusement, and am of opinion it is one of those questions to which it is extremely difficult to apply any hard and fast rule. In fishing with gentles, a much heavier percentage of bites are lost than in fishing with paste; this is so generally admitted, and the reasons for it are so patent, that we may dismiss gentle-fishing at once—to put "Mark Antony's" case into simple language, as I understood it, that gentleman states that an ordinary angler fishing with paste will, on the average, miss four bites out of six. I cannot help thinking this is placing the average of bites missed far too high; at the same time, there are undoubtedly occasions when the number of misses are alarmingly increased—so increased as to make the patient rodster wonder whether his right hand has lost its cunning. I have no hesitation in stating that, in my opinion, the Lea men are the keenest roach-anglers in the world; but even here I have heard, not ordinary roach-fishers, but A 1 men, exclaim, as they disjointed preparatory to rebaiting: "Bite, yes; had two or three fair knocks, but can't hit 'em.' Yet these men's tackle was perfection, rod striking instantly and from the point, line shotted to a shade, only the merest speck of the light porcupine quill showing above the surface of the water, hook of the finest wire, bait a little ball of paste rarely larger, often smaller, than a dried pea.

[We thank Mr. Bonvoisin for his opinion given at our request; it substantiates our view of the matter, as also does Mr. Charlie South's interesting letter in this week's GAZETTE. There are few men living who could beat Mr. Bonvoisin at roach-fishing.—ED.]

THE GRESHAM ANGLING SOCIETY.

THE meeting of this society on Tuesday evening was very largely attended, Dr. Theodore Cash in the chair. At the previous meeting Mr. Henri Brett gave a particularly interesting account of his recent adventures in Ireland, describing the fishing as excellent, and the peasantry as giving him a very hearty reception, so that no angler need fear giving Irish waters a trial. Pending the arrival of Dr. Brunton, Mr. A. W. Parker described a refrigerating apparatus of a novel character, introduced by Mr. Brooke, the well-known salesman of Leadenhall Market, who, in response to a warm vote of thanks, very kindly offered to receive and keep any fish weighed-in by members, and present them fresh on the society's table for inspection any Tuesday evening. Dr. Brunton then gave his paper on "The Special Senses of Fishes." In opening, the Doctor remarked that he found his investigations would lead him into a greater dissertation than a single evening would suffice for, and he had, therefore, selected the sense of sight, as the principal topic of his paper. The structure of the eye, and the optical laws involved in the use of it, were very clearly indicated, the Doctor being aided by the use of diagrams and dissections. Space will hardly permit us to deal fully with this admirable paper, but the conclusions arrived at may be briefly stated. The eyes of fishes, viewed as optical instruments, are inferior to those of man. Their range of sight is limited, but can be used effectively with a very small quantity of light, although it is defective in bright sunshine. The eye of the fish is a means of self-preservation—quick too see food, and quick to see an enemy, in his own element and out of it. When the angler can see the fish, the fish can see the angler. The best light for fishing is a diffused light, such as when the sun is clouded over, for then the fish come out to feed, being able to see and search for their food without pain or discomfort. The worst light for fishing is brilliant sunshine, for then the fish, as a rule, are dazed, and seek shelter. There is apparently no provision for closing the eyes during sleep, although fish, in common with all other creatures, undoubtedly take rest and repose. A ruffled surface, by dispersion of the rays of light, utterly obliterates the fish's view of anything out of the water, beyond a very short distance from the surface, and a running water does the same, but to a lesser extent. Fish have a power of selection of colours for food. The colour of the angler's clothing is not of so much importance as keeping out of sight; a dun or green garb is the best, but it is the angler's eye and face which frighten most. At the conclusion of the paper, which was fully appreciated and applauded, Dr. Cash made a brief but lucid statement, endorsing the results at which Dr. Brunton had arrived, adding also a little supplementary information on one or two points not fully brought out. Mr. Frost, in the course of an amusing speech, put a number of useful questions; Mr. Jardine also giving some details of his experience. Dr. Lloyd and other members having addressed the society, Dr. Brunton replied *seriatim* to the queries that had been put, resuming his seat amid such tokens of appreciation as must have fully assured him of the interest his paper had evoked. Mr. Crumplen moved that the hearty thanks of the society be tendered to Dr. Brunton, which, endorsed by remarks from Mr. Clarke in his usual vein, was carried with enthusiasm. The hon. secretary announced during the evening that Mr. John Groom had weighed in two pike, one of 17½ lb. another of 13½ lb.; Captain Alfred, one pike of 9 lb. and one perch of 2¼ lb., all from private water. The visitors' book contained more than the usual number of signatures, including Mr. Wheatstone (President of the Stanley Anglers), Dr. Maclaurin, Mr. Leo Bonvoisin, Mr. Morgan, Mr. George, and many others. Mr. J. P. Wheeldon (honorary member) was also present. Dr. Defreiz gave the toast of the "Visitors," coupling with it the name of Mr. Wheatstone, whom he hoped to see with them again, and also Dr. Maclaurin, to which both gentlemen responded. The librarian having announced the presentation of several volumes to the library, and the Anglers' Benevolent box handed round to non-subscribers, Dr. Cash vacated the chair, which he had filled so ably; the usual musical selections being afterwards given. We may mention that papers are read regularly on the first Tuesday in each month, and on these occasions particularly, all anglers interested are welcome to attend. The question of river pollution will shortly be dealt with, and a collection of tackle, from the Continent, be shown at an early date.

DUKE OF CORNWALL ANGLING CLUB.

THE fifth half-yearly dinner of this society was held at the club-house, the Duke of Cornwall, Lismore Circus, Haverstock Hill, on Monday, December 4th, Mr. J. Heckford presiding, faced by Mr. Hyde. Mr. McCluer, the proprietor and treasurer, giving them one of his well-known dinners, which met with great satisfaction from the members and friends present, which would have been more numerous had not the dinners in the neighbourhood of the Temple occurred the same evening, thereby attracting many of their supporters. It being Queen's Day, the toast of "The Queen," proposed by the chair, met with a great reception, as did also "The Club's Prosperity." The "W. C. A. L. A." proposed by the vice-chair, coupled with the name of Mr. Jennings, of the Bostonian A. C., also met with the reception which it always deserves.

Mr. Jennings, in reply, thanked them for the manner in which they kindly alluded to the society, and after feelingly referring to the loss Mr. Geen had sustained, and the late illness of Mr. Hoole, gave particulars of the state of associations, which were very interesting to the members and friends present. The chairman then proposed "The Visitors," remarking how pleased he was to see so many brother anglers; their nearest society, the North-Western A. C. being well represented, and the toast was coupled with the name of their secretary, Mr. Hill, who, in reply, gave them some good suggestions in respect to management, and strongly advocated their attending the meetings in as large numbers as possible. Mr. Hillier also thanked them for the toast, and hoped their takes would soon be as heavy as in his own club, the North-Western. Mr. Harris and Mr. Walter Filby also ably replied. The health of the host, Mr. McCluer, was very cordially drunk, as was also the hostess, Mrs. McCluer, with musical honours, and on Mr. McCluer's rising to reply, he was received with quite an ovation, which he thoroughly deserved, and thanking them, promised to do everything in his power to make the society as successful as possible, at the same time regretting that their takes were not quite so heavy as he should have liked, as it would have pleased him to see their doings more often reported, especially in the FISHING GAZETTE. The chairman then proposed the health of their late treasurer, Mr. R. W. Galloway, which was drunk with musical honours.

Mr. R. W. Galloway, in reply, said how pleased he, as promoter of the society, was to find them in such a flourishing condition, and after alluding to the pleasure it gave him to see so many friends and old companions, assured them that although he was a member of the North-Western A. C., he wished them every success, and promised his support (which he certainly gave in the shape of prizes, as the list will show).

After the "Chair," "Vice-chair," and usual toasts, the treasurer distributed the prizes, which were taken by Mr. Kettle (3), including 15s. kindly presented by the Bostonian A. C.; Mr. Hyde (2), Mr. England (2), Mr. New (2), and Messrs. Mann, Heckford, and Parker 1 each. A capital list of prizes was offered for competition during the next half-year, and then the following list of gentlemen kindly gave recitations and music:—Messrs. Heckford, Hyde, Aldis, Bennett, Galloway, Amies, Hanold, Jennings, H. Green, Brown, Lealand, Rodell, McCluer, and W. Brown.

When we say that Messrs. Rodell, W. Hanold, and W. Brown presided at the pianoforte, it will quite speak for itself that a most enjoyable musical evening was spent.

CAVENDISH ANGLING SOCIETY.

The members of the above society competed on Sunday last for three prizes. The conditions were Lea or Thames within a fare of two shillings and sixpence, all fish to weigh. Mr. Reeves was returned winner of the first prize with jack, Mr. Lee second with jack, and Mr. Mathew, jun., third with roach. Mr. Humberstone, the worthy host, was elected an active member on Thursday last. This will further cement the good feeling which exists between the members and Mr. Humberstone, whose interest is unquestionably with the society. Several other gentlemen were also elected, and others duly proposed. In all, affairs look very promising for the Cavendish Angling Society.—E. CHAMBERS.

CLUB REPORTS.

FITZROY ANGLING CLUB.

On December 3rd the members of this new society ventured for the first time to weigh fish at their club house, the Crown, Cleaveland Street, Fitzroy Square, Mr. Harris being the most fortunate competitor, having a fine show of roach from the Thames, thereby winning the first prize offered to what promises to be a very successful society. Meeting nights, Tuesday and Sunday evenings. —HAWKSIRE.

IZAAK WALTON ANGLING SOCIETY.

Three of the seven special prizes given on Wednesday, November 29th, will be fished for on the second Wednesday in January; all fish weigh; members to choose their own fishing water. The remaining four specials, given at the same time, will be fished for on the second Sunday in January. The members will meet at the Rye House previous to fishing, and then be at liberty to go where they please.

NORTH-WESTERN ANGLING CLUB.

Messrs. Harris and Browsell, two of our members, weighed-in on Sunday last a good show of dace, the former 10 lb. 9 oz., the latter 3 lb. 9 oz. Messrs. Grindley, Hillier, and Aldis jack, and Mr. Packman roach.—H.

ORIGINAL ALEXANDRA ANGLERS.

Most of our members were unfortunate last Sunday, but the following had fish:—Mr. M. Dymond had a fine brace of jack, Mr. E. Dymond had jack, and Mr. Towndrow roach.—E. DYMOND, sec.

PORTSMOUTH WALTONIAN ANGLING SOCIETY

One of these pleasing little gatherings, which now and then crop up in connection with the above society, took place on Wednesday last in the shape of a complimentary dinner to Bro. Brooks, of the Commissariat and Transport Corps, on his return from the Campaign in Egypt at the club room, Golden Fleece, Commercial Road, when a splendid repast was served by the worthy host, Easton, in his usual liberal style. Among those present were the president, Mr. A. L. Emanuel; vice-president, Mr. J. E. Buck; Messrs. J. S. Dyer, F. C. Mortimer, C. Smith, Bracey, Warden, Hartley, Spinner, Daniels, Grenley, Brough, J. Buck, jun., Brooks, Howell, Pratt, Everett, Vaughan, Layton, Cleverly, Cap. Hill, treasurer; Tranter, secretary; and others. After the dinner the usual royal and patriotic toasts followed. The guest of the evening, in responding for himself and the army, said he was glad once more to be among his brother anglers, and after the fortunes of war to smoke the calumet of peace. Bro. Brooks, on the occasion, was decorated with four medals besides the Egyptian medal, which had been pinned on his breast by her Majesty at Windsor. The evening was enlivened with some capital harmony; Mr. G. Sylvester presiding at the piano, singing some of his favourite melodies. Mr. J. Buck, jun., gave the new topical song "Egypt," and Mr. J. S. Dyer, "The Fine Old Jolly Angler." Every one thoroughly enjoyed himself, and the old adage, "Happy to meet, sorry to part, and happy to meet again," brought to a close one of those merry meetings for which this club is famous. On the following evening (Thursday) the regular club night, after the usual business was disposed of, Mr. J. E. Buck, the vice-president, read a very interesting paper on "The Carp"—Mr. Buck being a first-rate angler, he handled the subject in a very practical manner, which was received with enthusiasm.—DAGGERWOOD.

RODNEY PISCATORIALS.

On the 3rd we visited Weybridge in time to be caught in a steady shower, which compelled us to seek refuge in the Hand and Spear, where the accommodation is all an angler can wish for. Here he can obtain bread, cheese, and pickles, roast beef, a ham cured bloater, or a leg of mutton. After having partaken of some of the former and sufficient moisture to counteract that already obtained outside—the rain in the meanwhile having left off—we walked across the common to the Association water, which we reached in about ten minutes. I must say that this water looks a "likely shop," and at some time or other might have have had, or will have, some good fish in it. We tried it for some time, undisturbed by either the inhabitants of the land or water, and some of the members began to long for the sight of one or the other; at last it was agreed that they should go on a voyage of discovery, which they did till two o'clock, when they returned and reported the result—"It's no good fishing here; the cut was all cleaned out a short time ago, and the fish have not had time time to get back again yet, and when they do, they will want more watching than they get now, and those who watch the water will also want watching. But if we go into that portion of the Wey that runs into the Thames, we might stand a chance of getting some fish." We now packed up and adjourned to the place alluded to, and we were soon on "the job" again, each in his own style, either Nottingham, Ledgering, or tight line, all trying his best to get a fish, till nearly 4 o'clock, when "yours truly" landed a roach just above the society's standard. Four o'clock having struck, and the rain pelting down, we packed up and retreated to Host Capell's, and indulged in a glass of ale, and then started for the Hand and Spear. Here we were so interested in eating and drinking, that only two of the members caught the 5.45 train up to London, the others managing to reach the platform in time to see the train go out. We now had two hours and more to wait for the next train, so we returned to Mr. Mason's, who, seeing we had missed the train, invited us to inspect his private collection of piscatorial, ornithological, entomological, and other trophies, of which I must say he has a very nice collection, the inspection of which caused our two hours to pass away very comfortably. We thanked him, and wished him good-night, caught our train, reached London and our headquarters in time to save the society a blank, and as no other fish was exhibited, I was declared the winner of the first prize. The other prizes not taken will be given for the 3 gross weights of all fish taken "where and how you like," from now to the end of January, 1883.—PIXIE.

ROBIN HOOD.

The following members showed a few roach on Sunday last:—Messrs. Baillie, Hutchings, Baker, Theobald, and J. K. Fitch. We fish for eighteen prizes on Sunday next, at Cookham and Bourne End.

P.S.—Total weight of fish for half-year, 604 lb. 3 oz.—J. A. FITCH, jun., sec.

SOUTH LONDON ANGLING CLUB.

The first visit that has been made by the West Central Association to the South London Angling Society, which is the oldest club south of the Thames, took place on Thursday, Nov. 30. Their room, which is a large one, and well-hung round with fish, some of which are to be sent to the Exhibition of 1883, was quite full of visitors; Mr. L. Bonvoisin in the chair, Mr. Buck vice. There were some capital songs by Messrs. Fitch, Beckett, Head, and others, also one written and sung by Mr. Fox, of the Walworth Waltonians, in praise of the South London Club, which was loudly applauded. On the roll being called, there were fourteen clubs from all parts of London represented, and among others were Messrs. Wheeldon, Hatfield, Bates, Crumplen, Beckett, Stebbings, Whittaker, and Besley. A very pleasant evening was spent by all.—G. H. FIELD.

THE JOVIAL ANGLERS.

Our "Jovials" mustered along the banks in good numbers on Sunday last, in spite of the inclement state of the weather; but their efforts were not very successful, as out of the dozen who weighed-in not one could weigh-in more than 6 lb. The fish, though few in numbers, were very fine, especially the dace. Our contingent from Shepperton were also unlucky, as "no fish" and "smiling faces" was all they brought to weigh-in. For the benefit of our absent "Jovials," I may state there are two prizes to be fished for next Sunday for the two heaviest takes during the day. One of our honorary members, Mr. Orvis, of the Locomotive Inn, gives three handsome prizes to be fished for on Boxing Day, when I hope to be able to report some better takes.—HARRY PLATT, sec.

THE LITTLE INDEPENDENT ANGLING SOCIETY.

Our members were out last Sunday, and met with some good sport. Mr. Scott headed the list with a fine show of roach and some jack; Mr. Hurwood, the lucky man, having a fine show of roach; Mr. Raine some jack; Mr. Humphreys, tench; Mr. Petrie, dace —W. H. EVANS, secretary.

THE PISCATORIAL SOCIETY.

The annual club competition in connection with this society took place on Monday last, and is always looked forward to with great interest on account of so many members being professedly and practically chub anglers. The condition of the water was unfavourable for the sport, and the fish were not on the feed. One of the unsuccessful competitors remarked that in the upper portion of the river where he was fishing the water appeared to be in good order, but he could not get a single touch. There was a good attendance in the club-room on Monday evening to witness the return of the competitors, and Mr. T. R. Sachs was unanimously voted into the chair, the duties of which he most ably and efficiently discharged. The result of the contest was that Mr. Currie Banfield, of the Swan Hotel, Staines, was declared to be the winner of the first prize of three guineas with two fish weighing 6 lb. 5 oz., the largest 4 lb., the latter fish taking the supplemental prize of one guinea for the heaviest specimen. Mr. J. Ross Faulkner came in for the second prize of two guineas with three fish weighing 4 lb. 8 oz. Mr. C. P. Wheatstone, the donor of the supplemental prize, weighed in one chub of 2 lb. 12 oz., and Mr. J. G. Andrew a roach of 2 lb. 11 oz. All the fish were caught in the Thames. There was a goodly number of unsuccessful competitors. Dr. Brunton registered two grayling, caught with the fly, weighing 3 lb. 12 oz., the largest 2 lb. 8 oz. Mr. W. B. Adlington showed one pike of 7 lb. 2 oz. from private waters, but the crowning feature of the whole evening was the exhibition of nine pike by Mr. Thomas Huggett, weighing 61 lb. 13 oz., the largest 11 lb. 8 oz., from the Avon. A very pleasant and enjoyable evening terminated with a cordial vote of thanks to Mr. T. R. Sachs, the healths of the successful anglers having been previously drank with great enthusiasm and suitably responded to. The smoking concert, which is the fixture for Monday evening next, promises to be a great success, and some good talent has already been secured. Mr. T. Norman Harrison, who generally conducts the arrangements, is safe to bring it to a successful result.—B.

THE SHEFFIELD UNITED ANGLING ASSOCIATION.

The annual meeting of the above was held in Sheffield on Wednesday evening. A very encouraging report was made by the president, and a satisfactory balance sheet read by the secretary; besides saying that the latter showed a gain of £8 on the year's operations, and that the society had upwards of £106 in hand. We must defer other particulars to next week.

TRAFALGAR ANGLING SOCIETY.

Two of our members, fishing the Thames at Cookham on Sunday last, caught two jack; one caught by Mr. Abington weighed 4 lb 12 oz., and the other, caught by R. Gaze, 1 lb. 6 oz. The visit to this society on Monday, 4th, was attended by delegates from eleven clubs. Some capital songs were sung by the following gentlemen, who did their best to amuse the company: Messrs. Humphries, Stephens, W. White, H. White, L. Bonvoisin, J. Richardson, Potter, W. Neal, and several others The following is a list of clubs who answered to the roll:—Bloomsbury Brothers, City of London, Buckland, Reform, Royal George, St. John's, Hugh Middleton, Crown Piscatorials, West Central, North Weston, and Trafalgar.—J. GAZE, sec.

UNITED BROTHERS, DEPTFORD.

The members of the above society fished a pegged-down match on Sunday, the 3rd inst., at St Margaret's, with the following results:—First prize, shade of birds, taken by J. Jones, given by Host Wood; second, table cloth, taken by J. Currans, given by himself; third, pair of bronze heads, given by H. Muggeridge, taken by W. Tyler; one other prize not taken. A jack-fishing match will take place at Pulborough on Sunday next, the 10th, by members of the above society for money prizes. On Tuesday, the 12th, we receive a visit from the W.C.A.S., when all anglers who can make it convenient to come will be made welcome.—WILLIAM BELTON.

WESTBOURNE PARK PISCATORIAL SOCIETY.

The members of the above society fished a match (Thames only) on the 3rd instant with the following result:—Mr. H. Thompson, 1st prize, £1 1s. cash, and pair of framed chromos, value £1 1s.; Mr. Lines, 2nd, £1 1s.; Mr. Yarham, 3rd, 17s. 6d.; Mr. W. Thompson, 4th, 15s.; Mr. Severn, 5th, 11s.; and Mr. Perkins, 6th, 5s. The take was not large, the first prize being taken with 3 lb. $8\frac{1}{2}$ oz. The members have unanimously decided to support the committee of the International Exhibition, and have instructed the secretary to apply at once for space for twelve cases of fish. The last match of the season will take place on the last day of the season, December 31, previous to which members whose names are on the prize list are respectfully requested to forward their donations to the secretary. The annual dinner, when the prizes will be presented, will take place on Tuesday, January 23.—W. ADEANE.

RIVER REPORTS.

MID-THAMES.

From what I glean from the various angling stations between Windsor and Oxford, good all-round sport has been experienced during the past week, both by punsters and bankers. As I scribble this, snow is falling fast, and likely, I fear to continue; still anglers should not stick at this, for many a fine take has been had from snow broth, and I myself well remember taking two trout below Cookham on the day Hermit won the Derby—a day memorable for its snowstorm. It is not the actual snow which falls into the water which takes the fish off the feed, but the melted snow from the land during and after a thaw. The flood has gone down rapidly, and the Thames, although the stream is still strong, is in prime fettle for perch, roach, jack, and chub. From Bray and Maidenhead my reports are meagre in the extreme, but I have unverified tales of decent takes of roach. At Cookham, Mr. Grazebrook has had jack galore, and tells me his private fishery, "The Strand," near the village, has been well stocked by the flood and otherwise, and is well worth a visit—tickets are, I believe, 2s. 6d. per day. At Hurley, on Thursday, Mr. Arter, in some five or six hours, obtained sixteen dozen and four roach from one swim, all excellent sized fish. Mr. Gerkie has had some capital perch, six of the fish nearly reaching a pound each. Mr. Bergar has been busy with the jack in the Hurley district, but missed more than he caught; and a foreign gentleman staying at that ancient and fish-like hostelry, "The Bell," went in for 18 lb. of pretty roach on Sunday last. Mr. Brooksbank (of tench notoriety) on Monday and Tuesday, got some grand roach by ledgering with lob in an eddy opposite Frog Mill Farm, just below Medmenham. Mr. Sturges, out with Bob Young (a civil and steady puntsman from Medmenham Hotel), has got hold of some jack, but not of any grand size. Mr. S. tells me, however, he lost a beauty the other day through some defect in his tackle, but means to "wait upon my gentleman" upon a future occasion. Tom Street has been fishing lately with the "Captain," taking some fair roach. The Henley waters are silent, but at Sonning, Wargrave, Maple Durham, and Pangbourne "good business" has been done amid roach and perch. Every prospect of severe frost and sport during coming week.—MARLOW BUZZ.

Ancholme District.

I was too unwell to go out to make the necessary enquiries last week, but find from reports since to hand that but little was done on the main river. No pike of any consequence were taken, and the only fish that gave moderate sport was the roach. Since then the weather has been too unsettled, and withal so uncomfortable that but few anglers have left home comforts for the uncertain attractions of the river.—THOMAS FORD.

Chichester.

The past week has not been a prolific one, but few fish being taken; but the weather has certainly not been favourable. Mr. Terry lost a couple of pike a few days since, one snapping tackle close to the hook, the other making for a weed bed and the hook breaking hold. Unlike the generality of lost fish, they were not heavy ones. The weed clearance at the basin was accomplished in a satisfactory manner, but a good breeze would be acceptable to mass the floating vegetation. The weekly competition proved a blank, heavy rain driving rodsters to shelter. King Frost has asserted his supremacy, the snow this morning being some inches deep. It is snowing hard at present, with every sign of a continuance.—GEORGE F. SALTER.

Derwent (Chatsworth).

I was unable to send a report last week owing to my not having anything to say worth recording, the very unfavourable weather being altogether dead against fishing; but there was a decided improvement in the weather at the end of the week, several sharp frosts having set in, which was a great improvement on the extremely "liquid" weather we had been having, and fish were well on the feed at the bottom. Yesterday (Wednesday) there was a heavy downpour of snow, which has rendered it impossible to fish, although it has not hurt the water, which is in fair condition; but even the most enthusiastic will hardly care to walk about in a foot deep of snow to try their luck. I hope to send a more favourable report next week.—WHEATSHEAF HOTEL.

Dove.

Weather very wintry, and I don't think we shall have much more angling this side Christmas. Snow is thick on the ground, and there is a further heavy fall going on as I write. Grayling, pike, and chub were well on the feed on Monday, and the same may be said of Saturday, when there were a few rods out below Tulbery, who succeeded in getting some fair samples of pike and chub. Below Rocester and Marchinton too, chub have been eagerly on the feed; but I am afraid anglers will now have to leave them alone for some time to come.—THE SPLODGER.

Exe (Exeter).

Winter has come upon us suddenly, and a very heavy fall of snow and frost has put a stop to all angling for a time. By this post I send you the Exeter paper for yesterday, giving a long and descriptive account of the Exe fishing and "Old Logs" last day on it for this season only; I hope sportsmen with their guns should have a rare time of it; and if the frost, which at present seems permanent, continues, some excellent bags should be made, as many wild fowl have been seen in the vicinity already. P.S.—In my last report for "hacks near Exe Quay," please read "Locks near Exe Quay.—J. A. KELLEY.

Ilfracombe.

Sea-fishing.—Our herring fishing is almost over. It has been a very bad season. The prospects were good at first; but the weather has been so stormy that the boats could not get a good drift. Thursday evening: Each boat caught about 200 herrings; one cod 20 lb., conger 18 lb., ling 15 lb. were caught with ground lines. Friday; The average of herrings brought in was about 250 in a boat and several hake; a large herring hog was caught in the nets. Saturday; Three cod, two 18 lb. each, one 16 lb., and a ling 14 lb. were taken from the spiller. Sunday: Average about half maize herrings each boat; six ling, one cod from the Spiller. Monday: About 50 herrings each boat; two ling, 16 lb. each, one cod, 20 lb., caught from the jetty with hand lines. Tuesday: Blowing strong; one cod, 20 lb., two ling, 16 lb. each, caught on the spiller. Wednesday: About 100 herrings caught, two cod, from 18 lb. to 20 lb. each, one ling. Thursday: Two large skate, one cod, and a thornback were caught on the spiller. Several fish have been caught with rod and hand lines from Torrs Point. Weather at present stormy.—E. COMER.

Lea (Cook's Ferry.)

The water after the floods is in splendid condition for all kinds of fishing. Mr Peel, of Tottenham, took a very nice jack on Saturday and two more since. Mr. Bond, of Edmonton, also took a very fine one to-day, besides numerous small fry taken by other persons.—T. A. WARD.

Lea (Ware).

Although the river is in capital condition as regards colour and height, still little or no fish have been had; and, as snow is falling at time of writing, prospects seem dull.—LION AND WHEATSHEAF.

Leicester.

The exceedingly wintry weather we have experienced since last Saturday has almost completely put a stop to angling in this locality for the present. We have had several heavy falls of snow, and the waters look like claypits. A few of the more persistent anglers were out on Saturday and Monday; Mr. Stafford, on the first-mentioned day, taking in one of the quiet spots a dozen and a half of roach. Mr. Prime, on Monday, whilst fishing for roach, caught a nice perch weighing 13¾ oz.; the fish was weighed in at one of the clubs in town. In the same swim the gentleman also took a fair quantity of roach. There has been no angling done hereabouts since Monday. Snow fell continuously the whole of Wednesday, and there was but slight improvement in the weather up to a late hour on Thursday evening.—ALERT.

Nene (Northampton).

We have not been able to indulge in any angling for the past fortnight on account of the flooded state of the river, but it is now going down nicely. I have been informed of one gentleman killing a nice pike of 16 lb. in the lower part of the Nene Angling Club water, and there have been some nice takes of roach. So things are beginning to look better for the future. The members of the Northampton Working Men's Angling Club have postponed their prize fishing until December 16th.—T. F.

[Received too late for last week.—ED.]

Ouse (Littleport).

I thought last week we should have a turn among the roach and pike, but the rain has again made the river unfishable. On Monday, however, Mr. Hills, of Ely, got three nice pike before the water came down too thick, 8 lb., 4½ lb., and 4 lb. I was very pleased, for I certainly thought when he started he would not do so well.—CHARLIE SOUTH.

Thames (Goring).

Water coming down thick—not in bad order for roach. Prospects look bad for the next few days for anything but roach fishing. Nothing much doing. My best day was Sunday: 2 jack and some good perch. Largest jack, 5 lb.—JOHN RUSH.

Thames (Oxford).

The condition of the river is all that can be desired from a fisherman's point of view, both in regard to height and colour; I scarcely ever remember the water being so fine at this time of year, and things generally, so far as appearances go, could not be more "couleur de rose," but appearances are too often deceptive, and so it is now—the piscatorial lament of the past summer, "No sport, and wot's more, we carnt get 'em to bite," is reiterated by every rodster along the banks; but "nil desperandum," it is an ill wind that blows no one any good; if the fish won't bite now, there will be all the more in the river next year to make up for the shortcomings of this one. For my own part, I have never experienced such a bad season; no fish have really fed well, even amongst the oldest fishermen. Some of them (lucky beggars), with both time and money at their command, who can go almost where, and certainly when, they like, the cry is the same; some even express an opinion that there are no fish in the river. Bosh! My brethren, use common sense; it is beyond your skill to lure them from their homes, but nevertheless they *are* there, and as plentiful as in the past seasons. On Thursday last, four small jack, weighing 8 lb., were taken by Mr. Munday from the ditch at the back of the G. W. R. engine sheds with a live bait. On Saturday, although there was a sharp hoar frost, which covered the trees with fairy festoons of sparkling white feather-work, and rendered my stroll very enjoyable, the fish obstinately refused to feed. A few fishermen were out, but none of them could show a fin. One gentleman with whom I fraternised—good, thoughtful man—produced a bottle of rum and water, "'Ave a sip, it'll do ye good; real cold work this for the toes," said he, as he handed it over. I sipped. On Sunday one small jack was taken in the Fisherrow, and two more about 1 lb. each were had from the G. W. R. ditch. I wonder the fellow—I can't call him angler—was not ashamed to take such sprats. However, I hope the bones tickled his throat when he was eating them. Since then I can hear of no one who has been out. As for myself, I don't intend going before Christmas, when we shall try a private pond, where there are such—oh such whacking big jack; but more of that later on. Two rather rare birds—a pair of black swans, which have escaped from Blenheim Lake, have taken up their quarters in company with seven or eight white ones on Post meadow. Wish some one would be kind enough to shoot the destructive brutes.—CHERWELL OTTER.

Thames (Windsor).

After a few weeks of nothing but floods and unfavourable weather, the water has settled down to fine condition for all-round fishing. From up stream I hear a certain local was well among the roach and perch, and caught one jack so large, he wouldn't like to say. A member of the Eton Angling Society, out yesterday, after the chub, failed to get a bite. On Monday last I was out roach-fishing with red worms; bagged 14 perch and 12 roach, largest perch, 1 lb. 8 oz.—G. LUMSDEN.

Trent (Newark).

A few ardent piscators took advantage of the weather last Friday and Saturday, but sport was not very good, water in bad condition. One angler succeeded in taking a decent chub, 4 lb 2 oz., with worm, but I could not hear of anything else worth reporting. Heavy rains have again caused a rise in the river. Yesterday we had a very heavy snowstorm, followed by a rapid thaw, so at the time of writing the river is bank full, and every prospect of a heavy flood.—THE TRENT OTTER.

Trent (Nottingham).

There has been little or no angling this week. The river on Sunday was in splendid condition for bottom-fishing, but on the following day a sudden rise was experienced, and subsequently a flood set in. On Thursday, the fields contiguous to the stream were covered with snow, and prospects of sport were dismal in the extreme. For weeks past the "brethren of the angle" have met with a very sorry time of it.—THE MAN AT THE CLUBS.

Witham (Boston).

Stern winter has set in with us. A heavy snow has fallen, accompanied by a strong wind, which has drifted it in many places very deeply, and according to latest appearances, angling has been put a stop to for some days at the very least. What little sport we have had for some weeks now has been of the meanest description, and on the whole very dissappointing. Even when the pike have been reachable the banks and watersides have been quagmires and swamps, and their pursuit has been a matter of infinite difficulty. Since last writing, the interval in which angling was possible was but short, and consequently the reports from the station are meagre in the extreme. Some few fish were taken on the Sibsey drain on Monday, chiefly pike; and on the Hobhole drain there were also an odd brace or so. None of them were large. Some were also landed at Swinehead on the Fortyfoot, the best running to about 6 lb. Roach have been extremely quiet, and with regard to other fish absolutely nothing can be said. Angling has been next to impossible owing to ice clogging the line, and the fish have been as quiet as if absolutely dead.—THE YELLOW BELLY.

Wye and Derwent.

Both last Friday and Saturday good sport was had with bottom fishers on the Derwent, with both cockspur worms and maggots—the worms killing the greatest quantity of fish. Since then the weather has not been favourable for any kind of fishing, great quantity of snow having fallen; in fact, it is my belief we shall have no more fishing with the fly this year. Snow now falling. —GEO. JAMES EATON.

Yore (Lower waters).

A snow storm of exceptional severity swept over this district to-day (Wednesday), which will effectually preclude any possibility of grayling fishing for some time to come. No catches of any note have reached my ears during the last week on either this river or the Wharfe. I can fully endorse Mr. Corry's remark in last week's FISHING GAZETTE that in the higher waters of the Yore the grayling attain a larger size than lower down the river. I never recollect, however, killing one over 1 lb. 6 oz., and even a pounder is considered a good fish for the Yore. I have no doubt that Mr. Corry's experience on this point will be identical with mine.—FRANCIS M. WALBRAN.

THE SOUTH OF IRELAND.

The inquiry referred to in a previous letter of mine was held in the latter part of last week by Major Hayes and Mr. Johnson, Inspectors of Fisheries. The enquiry was directed chiefly to the adoption of safeguards against poaching—viz., to prohibit drift nets on board boats, and to number fishing craft with figures corresponding with those in their licences. The inquiry at Midleton, which is in the district whence the drift net poachers of the lower harbour belong, reveals the fact that ever since drift net fishing was prohibited within the estuary of the river Lee and the Harbour of Cork. The law had been systematically and persistently abused. It was admitted that though licences were taken out for drift fishing outside the limits of the harbour, no fishing operations were ever carried on there, and that the licences were, in point of fact, a cover for enabling the holders to break the law. Major Hayes remarked that this was an extraordinary state of things, and showed clearly the necessity for by-laws being passed. Evidence was heard as to the necessity of numbering the boats, and the inquiry terminated. It is likely, after the views expressed by the inspectors, and after the extraordinary statements made by the fishermen themselves, that the by-laws will be recommended by the inspectors.

A "BROAD" ADVENTURE.

IT was after the enjoyment of a very pleasant evening, spent with the Yarmouth Piscatorials at the Victoria Hotel, Great Yarmouth, that on the following morning myself and two other friends determined upon taking a drive to the Ormesby Broad, where some of the happy souls of the previous night had gone to fish, and we wanted to see what they were doing. The open carriages, numerous as they are during the season, plying for hire, were, in the chilly month of November, and with few visitors in the place, like "angel's visits, few and far between." There was one solitary vehicle on the ranks opposite the hotel, the driver instantly obeying our summons to come up to the hostelry. We soon came to terms, and, as one of my friends had to leave by the 5.45 Great Eastern train, he arranged at the Victoria for a little dinner at three o'clock, and invited me as his guest. At eleven o'clock "all three of us" were on our way to Ormesby, through the market-place of Yarmouth, one of the largest in England, and by way of Caistor and Filby. It was a glorious morning, and we were none the worse for the good dinner the evening before, and capable of enjoying a charming drive. With spirits "light as air," we chatted gaily as we went along—incidents of past life and scenes not to be forgotten flashed on the mind, and which the mother tongue was good enough to relate, sometimes creating a hearty laugh, and at other times more sober acknowledgments; but we were all bent on enjoyment, and wanting nothing to mar our pleasure. At length the little hostelry of the Sportsman was reached, which stands on the margin of the lake, and our driver instructed to rest and bait his horse for one hour. Our first resolve was to go to the bridge and try to find out what portion of the vast sheet of water our friends were fishing. They were nowhere to be sighted, but whilst remaining on the bridge for a little time my other friend enlightened us as to the whereabouts of a big jack which he had had on three or four times, and meant to have him out one of these fine days. "Sometimes," he says, "the monster is on one side of the bridge, and at other times on the other side." The plain, earnest manner of his language impressed us with the idea that he looked upon the result as a foregone conclusion, and he had our best wishes that it might be so. We then trudged back to the little inn, where only malt liquor was sold, through a muddy path, and then made for the water at the back of the house, where we found a boat in which we could row to our friends—but with a good quantity of water in it. My other friend, as I have termed him, is one of those who are ready for any emergency, and his idea was at once to scoop the water out of the boat, and taking hold of one of the sculls, to bring the boat up to the landing platform, he caught it against a ring which he wore on his little finger, and away it dropped right into the water. Here was an unfortunate occurrence; the ring was one which his late father had worn—it was therefore valuable, and, as its present owner remarked, he would not part with it for the world. The water was at this point about 18 inches deep and not very clear. The rays of the sun came in an oblique position so as to shade the water with the landing stage, which made it rather awkward. It therefore put a stop to our row on the lake, as the owner of the ring was determined to do his best to find it, and we did not care to leave him. Having removed his upper and under coat and turning up his shirt-sleeves, he soon commenced a diligent search. He lay down on the platform and first of all tried if he could see anything of it. This was of little avail, and then he commenced searching for it with his hands, without any result. Then, taking hold of a zinc hand-basin, he kept bringing up portions of the bed of the lake, and each haul was carefully searched. This was repeated for at least half a dozen times, but no ring was visible, and the fear was that the basin might possibly have embedded the ring in the muddy bottom. Once more he commenced the hand search, and time was wearing on, as we had to leave there at two o'clock. It appeared now almost beyond doubt as to the possible recovery of the ring; the hand kept returning out of the water with nothing in it, and, taking out my watch, I said, "The time is up for us to start," and almost simultaneously with those came these from the searcher, as he brought his hand out of the water, "And I have found my ring!" B.

SALT FOR SORE THROAT.

"IN these days, when diseases of the throat are so universally prevalent, and in so many cases fatal, we feel it our duty to say a word in behalf of a most effectual, if not positive, cure for sore throat. For many years—indeed, we may say during the whole of a life of more than forty years—we have been subject to sore throat, and more particularly to a dry, hacking cough, which is not only distressing to ourselves, but to our friends and those with whom we are brought into business contact. Last fall we were induced to try what virtue there was in common salt. We began by using it three times a day—morning, noon, and night. We dissolved a tablespoonful of pure table salt in about a half small tumblerful of water. With this we gargled the throat most thoroughly just before meal time. The result has been that during the entire winter we were not only free from coughs and colds, but the dry, hacking cough has entirely disappeared. We attribute these satisfactory results solely to the use of salt gargle, and most cordially recommend a trial of it to those who are subject to diseases of the throat. Many persons who have never tried the salt gargle have the impression that it is unpleasant. Such is not the case. On the contrary, it is pleasant, and after a few days' use no person who loves a nice, clean mouth, and a first-rate sharpener of the appetite, will abandon it."—*American Paper.*

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

"NETTING OF RESERVOIRS FOR THE THAMES."

Sir,—Under this heading there appeared in your issue of November 18, a letter from the President of the Thames Angling Preservation Society, which surely must not be allowed to pass without such notice as will lead to an attempt, at least, to realise the just expectation of the writer.

We are told that five tons of fish have been netted from reservoirs and placed in the Thames, that the work has been costly, and we who are benefited are asked to subscribe the money; that other waters, already at the disposal of the society, may also be netted.

It is not unfrequently stated that the anglers of London are mean and selfish, and unworthy of the labour which such men as Mr. Spreckley so cheerfully render them. I always held, and still hold, a totally different opinion, and I feel sure it is only necessary that my brother anglers, both poor and well-to-do, should be shown the merits of an appeal to cause them to come forward with their guineas, half-crowns, and shillings as generously as the state of their exchequer will permit.

If ever there was an appeal that all anglers should respond to, this is one; and if ever there was a name that should move anglers to generous feelings it is that of Mr. Thomas Spreckley.

Possibly I may be able to give a few facts connected with the last netting which did not appear to those gentlemen who, having received from Mr. Brougham a card of admission, attended for a few hours at the pleasantest time of the day while the excitement of good hauls was at its height. They and your readers generally little know the amount of labour which the organiser of these nettings has to get through to ensure success.

I can affirm of my own knowledge that Mr. Spreckley was on the bank of the reservoir at dusk, the evening before the netting, giving instructions to a policeman to guard the fish during the night against a possible raid of netsmen, who had learnt the water was down to four feet; that he slept in the immediate neighbourhood, and was the first on the spot in the morning; that he stuck to the work all day, removing the fish from the nets to the carriers himself; that he accompanied the fish to Kingston, and assisted to get them into the river; then, after fifteen hours' hard work, he started for home, which he could not reach for another two hours, by which time he must have been glad to pull off his long boots and get between the sheets.

Now, ye "Golden Barbels," "Good Intents," "Ne'er do Wells," and "Never Frets," we are one and all appealed to, and the man who appeals will think as much of the poor angler's shilling as he will of my guinea. We have no excuse—we must raise the money between us. Ye rich members of the Gresham and Piscatorial Society come to the fore, and you ever-ready Richmond Piscatorials help once again, and we shall soon have a sum sufficient to cover the cost of this good work.

It is clearly our duty to give this money. Will you kindly assist, Sir, by consenting to be treasurer of the fund? If so, I will do my best as secretary, believing that I shall have the active co-operation of the officers and members of the angling societies of London.—I am, &c., Philip Geen.

Lowther Lodge, Barnes.

[We shall be most willing to do as Mr. Geen suggests, and also to subscribe to the fund; it is clearly the plain duty of all who fish the Thames to support heartily such good work as Mr. Spreckley and other officers of the T. A. P. S. have done for us. We shall publish a list of the subscriptions as we receive them.—Ed.]

THE BATTLE OF THE STYLES.

Sir,—I must crave room for a few parting shots in this bloodless engagement, though I promise that my remarks will not require so much space as my last. "York Sher," after repeating the theory as to the Nottingham spinner making two casts while the other can make only one, which theory has already been demolished, makes use of one new argument; but that, I must say, is scarcely a fair one—not unfair towards me—oh, no! I don't complain of it; there is one with much greater reason than I to complain—I mean his friend with whom he fished on the occasion he recounts, and whose unhappy want of skill he has publicly contrasted with his own proficiency. My obvious reply is, that it is no sign of one art being inferior to another, because a novice of the one happens to be placed in juxtaposition with an adept of the other.

The temperate letter of "Thames Nottingham" provokes very little answer from me, except where he finds fault with me for citing the distances thrown at the two Fishing Gazette tournaments by the professionals, instead of those thrown by the amateurs. Surely I was justified in supposing that no one could better illustrate an art than its professors! But since I must quote the amateurs, I will do so, though I confess my task is less easy, in consequence of one extraordinary throw made by Mr. Little at the first tournament, and of his repeated success at the second, although not scoring such a long distance. Without this redoubtable champion, the scores of the other Trent performers certainly do not prove the superiority of their system, and I must here venture on an opinion I have formed, that the excellence of his style is in great measure due to his having, from association with Thames men, somewhat grafted their method on to the ordinary way of casting from the reel, and by so doing has rendered his throwing so powerful, that with all deference, Sir, to your opinion expressed in a note to "Thames Nottingham's" first letter, I would—if a match could be arranged—back Mr. Little to beat him. The following is a table of the scores made at both tournaments, showing the two longest throws by amateurs and (as a fair comparison of merit) by professionals, the latter being marked by asterisks:—

First Tournament.

Thames.		Nottingham.	
Powell	45½ yards.	Little	52½ yards.
Hoole	40½ ,,	Martin	47 ,,
*Wilder	50 ,,	*Bayley	45 ,,
*Andrews	45 ,,	*Foster	42½ ,,

Second Tournament.

Thames.		Nottingham.	
Hobden	47½ yards.	Little	47 yards.
Powell	48 ,,	Hobden	46 ,,
*Plummer	55 ,,	*Bailey	44 ,,
*Andrews	54 ,,	*Plummer	40 ,, (?)

From this we notice the fact that not only were the Nottingham professionals out-thrown by their brethren from the Thames, but were even beaten by the Thames amateurs; and one gentleman, who threw in both matches, threw his best in the Thames method.

These figures remind me, Sir, of another subject which has not received sufficient attention, viz., the expediency of abolishing the handicapping of rods at these competitions. Mr. Hobden, although using an absurdly short rod, actually threw farther than all the other six competitors save one, and one half-yard more would have equalled *him*; as it was, his allowance gave him the prize with some yards to spare. Nay, he even threw further with this short rod than he afterwards did with a long one, *but perhaps this was because he then threw in the Nottingham style.*—I am, &c., V.

P.S.—I propose, unless I am forced to write again on this subject, to send you a few remarks on the different ways in which a jack strikes a spinning bait. Perhaps they may have some bearing on a similar question now agitating the minds of the "roachers."

[Having seen Mr. Little make his wonderful casts, we know what he can do. All the same, we will back "Thames Nottingham" against him to any reasonable amount.—Ed.]

THE BATTLE OF THE STYLES.

Sir,—As one who has frequently practised both the Thames and Nottingham styles of spinning, I must agree with your correspondent who recommends the Thames style for fishing from a punt, but the Nottingham method when wading or fishing from the bank. With a level, clear space on which to coil the line, the Thames spinning is easier, especially against the wind, and numbed fingers do not cause an "over-run" of the winch. Moreover, in spite of what is said about the jerking of the rod tip in the Nottingham style, there is, I think, a more attractive spin in the bait in the Thames fashion. Except from a boat, the Thames style of casting the line is inapplicable.

As an instance of its disadvantages on the Lee and Blackwater in Ireland, worm fishing for salmon, is practised by casting in the Thames fashion of spinning; the fisherman is unable, however, to wade, and is restricted in his casts to suitable spots for coiling the line. Nottingham fishing would obviate these difficulties.

Last autumn an occasion arose which proved to me the benefits of being able to cast off the reel. I was trouting on a river known to contain good pike in many of its pools, and one of these pools was pointed out to me, densely wooded on both banks. Next evening I took down Nottingham appliances, and wading into the broken water below the pool, cast upwards with a small natural spinning bait. I immediately hooked a fish of 9 lb., which I drew down into the stream below me, and he afforded good sport. Shortly after, another pike of 10 lb. was treated in the same way. It was solely to the Nottingham method that my sport was due.

Two years ago, a friend was practising with me, spinning off the reel. As he was about to start for Norway, I advised him to try spinning an eel-tail for salmon by that method. In Ireland, a spinning bait is usually cast overhand like a fly, whilst wading, but the length of the cast is limited; and this method is "rough" on the rod, as some sinkers must be used to keep the bait low in the water.

The result of my friend's experience was, that he was enabled to kill many more fish than the two experienced rods on the same water, and one afternoon he killed seven fish spinning the eel-tail, while the others did not get a fish between them.

Amongst salmon fishermen especially, many are met who profess a pride in using the fly only—that being, in fact, the only way they can fish. I, for one, must enlist myself in the ranks of those who advocate fishing at top, mid-water, or bottom, according to requirements. Fly-fishing, whether for trout or salmon, is, no doubt, far the pleasantest and most sporting way; but then it does not always pay.

The difficulties of casting off the reel are, I believe, exaggerated so as to deter many from attempting to acquire the necessary skill, or rather knack. The most important point is to be certain that the gear is of correct pattern, and, to those who do not know that for themselves, Nottingham is the place to get it. With the directions that have already appeared in your paper, a *fisherman* will not meet with difficulties of any importance in casting. Scot.

ROACH BITES.—ORDINARY v. CRACK ROACHERS.

Sir,—What does friend "Anti-Theory" mean by this sentence, published in the Gazette of November 25th: "And having *bites which take your float down*, and then losing four out of six. Why, it is enough to make the hair of brethren of the roach-pole stand on end to think about it."

Surely, friend "Anti-Theory," you do not mean to tell me that you always get roach bites that take your float down? Well, if you do, four out of six would be a heavy percentage to lose. But how about those roach bites which *do not* take your float down? (But perhaps Lea roach are very accommodating, and plump the float down as though they meant business.) Trent roach, when not very well on, are cattle of a different stamp (please bear in mind that I allude to paste-fishing). Perhaps we are "stret-pegging"; our float is a dozen yards below us, when suddenly our float gives a little bit of a tilt over sideways, scarcely perceptible. Perhaps a novice has hold of the rod. If he notices this action of float (and nine times out of ten he does not), he says, "Oh! that was the bottom!" and then on pulling up found that half of his paste bait has gone in a peculiar manner. It was round when he put it in; now it is half-round—half of it hollowed out and gone. "Why, it is a bite, after all," says our angler, on discovering this.

Roach, when not on, will rob your hook continually of this paste bait. I have often wondered how the fish could bite half of my bait away and yet not touch the hook. I have had a dozen bites in succession, and yet not hooked a single fish. I have struck on the very instant the float tilted over; have waited a second; have changed the hook and the size of the bait, &c.—and yet it was no go. Says a Lea crack, "What a muff!" Well, I will admit I am a muff in this case (I am only an ordinary roacher); but then it seems queer that at other times I could hook the fish at every bite, and the real difficulty was to miss them; but when the roach are "on" like that once, the angler may go a dozen times after and not find them so very willing to take the bait and the hook. I maintain that an ordinary roacher will do well on the Trent if he hooks thirty per cent. of the bites he gets, taking the whole of the season through. "Anti-Theory" should try his hand on a 12 foot roach hole on the Lower Trent during September, when the roach are not on, with paste, and his float 20 yards below him, and let me sit by the side of him and watch his proceedings, and if he, as "E. W. A." says, "rarely misses one in two dozen knocks," why I should pay a visit to the nearest carpenters and order my coffin; but perhaps Lea cracks go to work in a different manner from what we Trent men do. I should like some information on the subject. One of our Newark anglers a short time ago was at work in the neighbourhood of the Lea for a few weeks. He gave us a very amusing description of the way of the Lea cracks. "In the first place," says he, "they have a rod any amount of a length; then they have no reel, merely a gut or hair line fastened to the loop at the rod-top. With the rod-point they follow the float down the swim, and if they get a bite and hook a fish they take off a joint of the rod and drop it down by their feet, and so on." He said he watched them a lot, but saw nobody get anything worth keeping. He was told one Sunday that a man had got a beautiful sample of roach. Curiosity took him to the individual in question; he had got 30 fish, and he says he would stake his life that they did not average 2 oz. apiece. A Trent angler would be ashamed to show them. I wonder if this is a correct account; if so, taking into consideration the smallness of the fish and the shallowness of the water, coupled with the fact that the Lea man's rod point is continually over his fish, he is not likely to miss many bites, for little roach bite as though they meant it. But let "Anti-Theory," J. F. Waters, "E. W. A." and Co. try a 12 foot roach hole on the Trent that is tenanted by a few pounders and mark the result.—I am, &c., THE TRENT OTTER

LOST ROACH BITES.—CRACK AND ORDINARY ROACHERS.

SIR,—If Mr. J. F. Waters, who, according to his own statement in the FISHING GAZETTE, "does not consider himself an adept at roach-fishing, after practising assiduously for twenty-five years," then, by all that is comical, I should very much like to know when a man may be considered an adept? He is willing to back himself to strike ten bites out of twelve, and yet he does not consider himself an adept!

If a man does not consider himself an adept after such a performance as that, what constitutes a fully-developed Lea crack?

No wonder there are so few roach left in the Lea. "E. W. A." says, "I have frequently watched some Lea cracks who rarely ever missed one in 2 dozen knocks." Dear me, is that possible? Name them! name them! Perhaps "E. W. A." will have the kindness to inform me under what circumstances these frequent watchings took place, and if he kept a record of his observations? That a man should deliberately take the trouble to undergo one such ordeal is certainly peculiar.

But that a man should frequently undergo such an ordeal appears to me quite inexplicable. Talk about "Patience on a monument smiling at Grief!" Twenty-three bites out of twenty-four, Mr. Editor, and frequently fishing with paste, with a rod 7 yards long, without a reel, and, when a fish is hooked, have to take off the two bottom joints, and pitch them on the ground! Exactly twenty-three bites out of twenty-four! Am I alive? Am I in my senses? If "E. W. A.," Mr. Editor, will kindly leave a note for me at your office when and where I can see this marvellous feat performed in the Lea, I should be deeply grateful. There can be no difficulty about it, as the feat is done so frequently. Let "E. W. A." carefully read, mark, learn, and inwardly digest the preceding letter, where Mr. J. F. Waters says, "Roach-fishing in the Lea is not as it used to be; the great difficulty now is not in striking the fish but in getting them on the feed."

It may amuse "Anti-Theory" to know that I often practise a style of roach-fishing I never yet saw adopted by anyone else, and without going too deeply into the peculiarities of this singular, yet killing, style, I may mention—

(1) I use no reel, and yet I can have either a tight or running line. Is not that peculiar?

(2) The rod is not more than 10 feet long; must not be too "whippy," nor too light, but nice and springy.

(3) The top of the float is never, under any circumstances, more than 20 inches from the top of the rod.

(4) It is absolutely necessary to be seated; and if you can draw the right leg under you, all the better.

(5) You must be close to the water.

(6) Paste is not the bait.

(7) That the fish are hit so beautifully, the fish seldom get off.

(8) That if you used the 7 yards of pole in these places which they are obliged to use in the Lea, you would not take a fish; in fact, you could not fish it at all, because you would get into a current—in fact, a "swirl,"—that would knock your float about, and in all probability take it out of sight altogether, and sometimes you would see it and sometimes you would not. What do you say, Messrs. Harry Hudson and "Trent Otter"?

(9) Practising this style I have taken, scores of times, 15, 20, 25, and 30 lb. in a day. Surely that is sufficiently practical?

Thanking you very much for your note to my last letter—I am, &c.,

MARK ANTONY.

P.S.—It may still further amuse "Anti-Theory" to know that I should never think of using but one hand when fishing for roach without a reel. Such is the difference between styles. The Lea roach anglers must be very much in advance of the Trent fishermen, for I do not believe there is a Trent angler living who could frequently kill 23 out of 24 bites or anything like it, when roach-fishing with paste. Ask them.

ROACH BITES.

SIR,—As "Mark Antony" says, I have no conception of the number of bites lost by ordinary roach-fishers, if the Welsh Harp gentlemen he refers to are such. His attempt at a sneer at the "crack Lea gentlemen," as he very facetiously calls them, is very poor even for him.

"Mark Antony's" 40 years' angling career must have been a very extraordinary one for him to have heard from some of the very best anglers, both living and dead, that they could get plenty of bites and but few fish. I—and I think I can speak for a great many more—would only like to get plenty of bites; the fish would answer as to the sticking.

His advice to find out the difference between a "crack" and "ordinary" roacher, and may I add a roacher pure and simple, as understood by us London men, should be taken to heart by himself; for he cannot know anything at all about it, or he would not quote from a book which, however good—and no one doubts it—it is on the Nottingham style, has nothing in common with the London style of roaching.

Of course "Mark Antony" has never used a roach pole, a fine line, and about a foot strike, or he would understand, which he assuredly does not at present, how so many roach bites are lost with, say, a ten-yard strike in one style, and so few with a foot strike in the other.

The remark as to a man wanting to put his knife into you because you hold a different opinion from himself is exceedingly rich, coming as it does from "M. A."

A few words more, and I have done. As "Mark Antony" seems to be very fond of advice, allow me to give him some. The next time he offers advice as to bait and method of angling (I refer particularly to his letter on Keston), let it be practical; and further, not to advise lovers of ferns to go where there are none.

I hope "M. A." will read the letters which appeared in the last GAZETTE, and others which are sure to follow on this question, and be convinced, notwithstanding what Mr. Woolfall rightly calls his generousness.—I am, &c.,

ANTI THEORY.

ROACH BITES.

SIR,—Being an amateur roacher, I cannot let "E. W. A.'s" remarks pass without saying something on the subject.

"E. W. A." must be blessed with extraordinary luck to hit eight or nine fish in every dozen knocks. Of course, by his statement, I presume he means that is his usual luck.

I know perfectly well that it is no uncommon occurrence to hook a fish nearly every swim. As an illustration, I once stood by Charlie South when he landed over sixty fish within the hour in the same swim. A year after, I landed 34 lb. in five hours, and lost two of the best it has been my luck to hook, which C. S. can endorse.

My idea with regard to the biting of the roach, or rather the non-biting, is that you get amongst a shoal of them off feed, and they simply rub against your bait. I don't think they take it in their mouth, or some others than Lea roachers would hit them. Why I think the above feasible, is that I have not unfrequently, when striking extra sharp, caught the roach either by the side or tail. I should much like to hear Charlie South on the subject.—I am, &c.,

Churton Street, S.W., Dec. 5. H. H.

BITES LOST WHEN ROACH-FISHING.

SIR,—I am afraid I shall sink beneath the notice of such anglers as "Anti-Theory," J. F. Waters, and E. W. A. when I say that the "Trent Otter" and "Mark Antony" are the sort of men I believe in, for it is my humble opinion that they know how to use a rod as well as talk about it.

I myself have handled both Thames and Nottingham rods; have fished with a 4-inch strike with the former, and with a 30 yards strike with the latter; but with neither rod should I like to say that I could at all times make sure of even one knock out of six.

You, Mr. Editor, have hit the nail fair on the head in your foot-note to "Mark Antony's" letter of 2nd inst., headed "Bites Lost when Roach-fishing," in saying, "Our experience is that there are times when you can kill fish at every bite, and others when, from some peculiarity in the biting, you miss 50 per cent. at least." Only, instead of using the word *biting*, the word *knocks* would have better applied—at such times they are knocks, and knocks only. For though they appear to be genuine bites and take down the float in a most aggravating manner, yet it is simply the roach butting the bait, without the ghost of a chance of their taking it into their mouths. How, in the name of wonder, any angler at such times can make sure of hooking his fish is beyond me. I have that branch of the art of angling still to learn. I have never fished the Lea, so am unable to say what the fishing is like on that water; but can hardly think there is so much difference between the fishing in one river and another that an angler can always make sure of three or even four knocks out of six. Anyhow, I do not think for a moment they could do it here—I have seen it tried by some of the best rodsters that ever handled a rod.

London club men—men whose word no true angler would think of doubting—men whom I respect, for they make roach fishing a science—they cannot do it at all times, though I have seen them with the roach well on hardly miss ten bites in an hour; and, if I felt at liberty to give names, men who would bear out my statement to the letter. If this should meet the eye of any of them, I hope they will take the matter up, and explain it away in a more able manner.—I am, &c., CHARLIE SOUTH.

[We have much pleasure in referring Mr. South to "L. B.'s" "Club Jottings" this week, in which this question is referred to. Mr. S. has given us a very interesting explanation of the reason why one does miss roach bites, or apparent bites, at times. As we said before, we can remember many days with the roach in various parts of the country when only the sheerest carelessness was the cause of missing any bites at all; and other days when, apparently, the float indicated bites which produced nothing to the most careful striking. They were not those downright pulls given by fish feeding in earnest, but jerky movements, not often taking the float clean under.—ED.)

ROACH BITES.

SIR,—I have read "Mark Antony's" letter with a very considerable amount of surprise. The only conclusion it seems possible to arrive at is, that he is not really a roacher.

As I stated in my last letter, I am not a "crack," but consider myself an average roacher.

In "M. A.'s" first "Example," he states "the float went under nearly every time." The question arises, Were they roach bites? I should imagine not. If they were, and were average-size fish, they were not hit quickly enough, and ought to have been brought to bank. "M. A.'s" remarks as to "Lea cracks" being content to take away five or six decent fish a day is easily explained. They fish in a water that is fished to death, and the fish over-fed. Has "M. A." ever tried such a water to fish in? If not, the sooner the better, for if he hits so few fish elsewhere, he would hit none there. I should certainly advise "M. A." to go and see for himself how many fish a Lea crack misses (he evidently does not believe what is stated). He would find on an average that not three in a dozen are missed, and the small fish returned to water.

There can be no wonder that fish are missed if, as "M. A." states, great round pieces of paste are used. Again, who ever heard of a roach-fisher waiting for the second knock; by doing so one might easily lose nine out of twelve fish, and the remaining three would in all probability hook themselves. "Trent Otter" may describe this in his book, but I will venture to state he is too good a roacher to practise it himself, and wait for the second "bob."

I am afraid M. A. has not watched the aquarium to any practical purpose; for he states that why the fish are sometimes missed is that they "blow" the paste out of their mouths. Undoubtedly they do; but to blow it *out* it must have been *in*, and then was the time to hit your fish. When they do this we usually say they are "not on feed"; but for all that, the float gives the almost imperceptible bob (especially if it be a big fish), and they ought to be hooked.

I have not fished for nearly 40 years, as M. A. states he has; so I hope he will not think I am trying to get my knife into him; but am simply stating what I myself have experienced. If he were a young angler, I would suggest his working gear for roach was somewhere out of order; but that would be presumption. I can only imagine he has not the keen sympathy and almost unity of action that must exist between the eye and the wrist, to be a moderate roacher. I well remember, when first learning roach fishing, a Lea crack "coached" me, and many a fish I have seen him hit where the float barely moved; in fact it is only by long experience such knocks can be detected, especially in roughish water. When detected, no second touch must be waited for, but an immediate response from the wrist. This is how Lea cracks get their fish, and for the matter of that, every other roacher.—I am, &c.,

E. W. A.

BAYONET-POINTED HOOKS.—BITES LOST WHEN ROACH FISHING.

Sir,—Will you allow me to state that the idea of "bayonet-pointed" hooks, so far from being a novelty, was made public by no less an authority than Greville Fennell in his admirable work, "The Book of the Roach," published some years ago. Much to my regret, I have lost my copy of that valuable text book on the art, but any possessor of a copy will be able to corroborate my statement that the worthy author's words are to the following effect:—"When the angler finds his book has become blunt he should use a small file or piece of stone to sharpen it, giving the hook a triangular shape from point to barb, so that it will cut in like a glover's needle." The words "glover's needle" are very deeply engraven on the tablets of my memory. The credit of having such hooks specially manufactured belongs, of course, to Dr. Brunton. At the same time I am sure he will readily admit that in this matter he has unconsciously walked a few steps further on the path previously trodden by an excellent and much respected writer on our common sport.

Dealing now with the second subject in the heading of this letter, I must say, that my experience is very much at variance with "Mark Antony's" theory that four bites are lost out of six by ordinary roach fishers. I have fished, principally for roach, in the Lea, Thames, Colne, Mole, Arun, and, in fact, most of the fishable water within the compass of a day's excursion from London, for the past sixteen years, and from close observation during that period I am inclined to the belief that three in twelve is the outside average of bites missed by ordinary roach fishers. By the term "ordinary roach fishers," I refer to those who are to be found in large numbers amongst our London anglers; men who bring judgment to bear on the selection of swims suitable to the season, and in the use of ground bait—men whose motto is neatness and delicacy in every item of their tackle and its manipulation. Without these qualities no man, in my humble opinion, is at all worthy the name of roach fisher. But the so-called cracks possess all these piscatorial virtues, with the extra share of knack or dexterity which distinguishes some men from their fellows in all branches of sport. I quite agree with "E. W. A." that these same cracks rarely miss one bite in two dozen.

"Mark Antony," however, bars the "cracks" from his imaginary table of averages; but surely he should also exclude from them such extraordinary roach fishers as the man who "loses five bites out of six, with the float going under nearly every time."

I myself am by no means a "crack"; but the expectation of a field-day with the "pounders" which are known to abound in my pet stream, the Lea, often induces me to spend a whole day on its banks with the meagre result spoken of by "M. A.," viz,, five or six decent fish; but I can safely affirm that on most such days I have struck every fish that has in any way affected the float in biting. When the water is in condition I use an eighteen feet pole, paste on the hook, and, for ground bait, crumb of bread one day old, soaked in cold water and kneaded with bran to the consistency of putty; should the fish be in the lackaidaisical humour referred to, I discard the white paste and employ the ground bait itself as the lure, using a piece just sufficient for a smaller hook than usual (see pattern enclosed). The fish on these occasions appear to be much less suspicious of the ground bait, and very small pieces thrown in serve to keep them together—remember they are feeding on it, and are soon satisfied. There must be no waiting for trifles or for a second bob, which, indeed, very few wielders of the roach pole dream of doing; and it is in this particular that the London style is to my mind much more effective than that of Nottingham—for roach fishing pure and simple, although I expect to bring a hornet's nest about my ears for saying so.

In conclusion, may I ask our friend "M. A.," as he appears to be residing near London, to pay a few visits to the Lea during the next few months—on Sundays if he can possibly manage to do so; let him watch closely the roachers then assembled on its banks between Broxbourne and Hertford, and then frankly state whether he has not had reason to alter the opinion he now holds. If I mistake not, he will then agree with J. F. Waters, that the difficulty is not in striking the fish, but in inducing them to bite at the bait on the hook.—I am, &c.,

J. McD.

[We are sure Dr. Brunton will under the circumstances pointed out by our correspondent, at once admit that *in substance* Mr. Greville Fennell is before him in the matter of the bayonet-pointed hook.—Ed.]

ROACH AND PASTE.

Sir,—Having had a varied experience in roach fishing, both in river and canal, I can fully endorse your remark in your last issue, that there are times when you can kill fish at almost every bite, and other times lose more bites, and miss fish by some peculiarity of humour they are in. I have fished in still waters with paste when I could barely see the float stir, and have caught roach, and good ones too; and at other times I have had great difficulty in making a catch when the fish have been giving good bites. When roach fishing with paste, either in river or canal, I always fish on the bottom, which I know from experience to be a more sure way of fishing for roach with paste than any other, as I think the paste looks more natural on the bottom, than hanging in midwater, or near the bottom. I am not surprised at our friend, Mark Antony having seen anglers lose five bites out of six, as there are plenty of anglers whom I know that have spent many years in roach fishing, and who, unless fish are in a good biting humour, can do very little. There are many reasons that I can give why so many bites are lost while paste fishing: one of them is, having too much loose line from the rod to the float, as a great many anglers have. Consequently, when fish are biting shy, they are continuously striking without success, causing a commotion and knocking the fish entirely off the feed; another is, having a float ever so many times too large, and which causes too much resistance to the fish pulling it. Again, having several inches of the line decorated with split shot, when one would answer the purpose, and a small one at that. Another reason why I think so many bites are lost is having a hook that is either too large or too small, in the former case with a lump of paste on that a fish is not in a humour to swallow but only nibble at. I think there are more bites lost through fishing with unsuitable tackle than any other cause. As it may interest some of your numerous readers, I will describe the way in which I fish with paste. The rod I fish with is 10 ft. in length, light and stiff, and for waters where I can fish 4, 5, or 6 feet deep, within two yards from the side, a longer one is not required. I can do more work with this length of rod than with one any longer, it being easier to handle and handier in every way than one of 14 or 16 ft. The line I use I make of chestnut hair, twisted at the top and single at the bottom; for the bottom hair I have the most round and finest hair I can get, consistent with strength. I generally fish with a No. 10 hook. Now, some anglers will say this hook is too small; but, when fish are biting shy, and, consequently, smaller baits have to be used to take them, better bites will be had, and more fish caught, than with a large hook and a bigger bait. I always whip the hook on with the hair inside the bend or shank of the hook, for two great reasons most essential to success in hooking a fish; as, when the hair is fastened outside the shank, and the point of the hook, say, put against the finger-nail and the hair drawn tight, the point of the hook will be found to describe an acute angle from the line. The whipping-on of the hook in this way will be a great cause of so many fish being slightly hooked and getting off. The other reason why I whip the hook on with the hair inside the shank or bend is, that the paste and point of the hook are uppermost when on the bottom, thus showing the paste well to the fish, without the shank being exposed. A hook that is whipped on any way, or on a hair that is uneven and not round, will be found by experimenting in a shallow place or vessel of water, where it can be seen, to be any way, and with the shank uppermost and the paste underneath. In this case how can an angler make sure of his bites unles the fish gulps the lot?—as it can only get at the point of the hook by turning the hook over. There will be many who will not understand how the hook can be made to lie on the bottom with the point up. It is done in this way: Whip the hook on as shown on a round hair, then take a small split shot, and about four inches from the hook fasten it on the hair, with the split of the shot towards the back of the hook; then make a runner or small ledger out of a piece of sheet lead, the same shape as about ¼ inch of thin pipe stem. This will slide up and down above your shot and keep the bait on the bottom, and does not impede the float from going down at the slightest nibble. The float that I use in slow waters is about three inches of peacock quill, and for river fishing with paste in this style the lightest float and smallest shot can be used. I should like to give the way in which I ground-bait, &c., but for fear of trespassing on your space,—I am, &c. W. H. B.

Salford.

HOOKS AND CREELS.

Sir,—A great deal is just now being written about eyed-hooks for fly-fishing, but I hear nothing of a similar kind for bait-fishing. I enclose needle-eyed hooks of old pattern, which I find very useful at times in its different sizes for worm, grub, and gentle fishing. The advantages of it are these: the ease with which it can be changed or renewed when necessary; the gut, from having been used, is moist, and only one knot instead of two is required to attach it, and its plain, smooth metal shank being more adapted for receiving the soft tissues of the baits before mentioned, than the rough, thick whipping of ordinary gut hooks. I knot it on by simply passing the end of the gut through the eye, and then doubling it back, and securing it with the ordinary gut knot, leaving about a sixteenth of an inch bristlewise on the top of the shank to assist in retaining the bait. I arrange my basket for carrying food, tackle, &c., thus: from the indiarubber shop I obtained a yard of drab mackintosh sheeting and some cement; I made a bag of this of the ordinary wallet shape, with expanding sides, but narrower on the top than the bottom, adapting the outline of the bag to that of the inside of the back of the basket, to which I attach it by means of a light strap and buckle passed through the strapholes of the basket, thus retaining it in position, and keeping it out of the way of the fish, and making it easily accessible at any time. I find the bag most useful, and before I hit on it was continually in a muddle, getting food and fly-books, and everything else in the basket wet and dirty. For this, or the hooks, I do not claim originality, but I never saw anyone use either but myself. The hook I picked up some years ago down in Cornwall, and have used it ever since.—I am, &c., Bittern.

[Our correspondent omitted to enclose the hooks, but we have no doubt he refers to the very useful eyed hook, brought out some years ago by Messrs. Warner, of Redditch. The eye is like that of a needle.—Ed.]

JACK TAKING DACE.

Sir,—I regret to find, from the tone and tendency of "Mark Antony's" remarks in last week's Fishing Gazette, that he is disposed to go further into personalities than I am, and I must, therefore, decline to follow.

Since the "incident" took place, I have been present on one occasion when a small roach was put into "jack's" aquarium. His jackship took no notice of the new-comer and made not the slightest movement. The roach, which had been behind jack for a moment or two, now attempted to go past; but, just as he got level with the other's head, an almost imperceptible movement of jack's body was noticed, and in the twinkling of an eye the roach had disappeared, and only the working of the former's gullet showed what had taken place. Not one of us (ten or twelve) could honestly say he had seen the roach taken, and we were all intently watching for the purpose of seeing if it was head or tail first. The only points were the roach attempting to pass, its instantaneous disappearance, and the movement in jack's throat.

I am very much obliged to Mr. C. T. Padfield for his letter, but, unfortunately, it does quite clear up the matter. If he, or yourself, Mr. Editor, will kindly supplement the information by stating the present law on the subject, an important point will have been set at rest.—I am &c.,

R. Woolfall,
Hon. Sec. Liverpool Angling Association.

Liverpool, Dec. 6.

PERCH-FISHING THROUGH THE ICE.

Sir,—Last Saturday week I went with a friend to a private pond perch-fishing with minnow. On arriving at the pond, to our great astonishment we found it covered with ice nearly an inch thick. We were determined not to be done out of our fishing, so we looked about for something handy to break the ice with, and having found a large branch of a tree, we made half a dozen holes, each about a foot or two square, at the best spots. We tried them all carefully with worm and minnow the whole afternoon, and only got one perch of about ½ lb. Have any of your readers had any experience in fishing through ice, and with what results? I may say I have fished this pond several times before, and have always been able to catch quantities of perch while trying for the trout.—I am, &c., Spider.

Derbyshire, Nov. 28th.

[Some fish—the chub, for instance—get ravenous in frosty weather; other fish seem to dislike cold and become partly torpid and will not feed. Barbel, carp, tench, and perch are examples; a very slight difference in the temperature makes all the difference in the world as regards their biting.—Ed.]

THE RAVENSBOURNE.

Sir,—In reply to "Fly Fisher," I beg to say I have fished in the Ravensbourne for the past twenty-five years, and with the exception of one field, what with boys bathing and dogs ratting, it is no good at all, being all railed off. If he goes he will see the usual caution on that square piece of board so repulsive to brethren of the roach pole.—I am, &c., Mark Antony.

THE RAVENSBOURNE.

Sir,—The information given by your correspondent, "Fly Fisher," is rather incorrect. The Ravensbourne rises at Keston, in Kent, and the Wandle near Croydon, in Surrey. Knowing the Ravensbourne well, I venture to give you a short account of it.

It rises from Cæsar's Well (named after Julius Cæsar, who encamped at West Wickham, close by, and who, as tradition tells, was short of water, and observing a couple of ravens continually passing backwards and forwards, had them followed, and so discovered the spring. He thereupon named it "Raven's bourne" (Anglo-Saxon, burne, a stream); it is also said that the three ponds were dug out by his directions for bathing purposes on Keston Common), and runs through three ponds, the first being almost on a level with the well, the second about a dozen feet lower, and the third about the same distance lower still. All three contain fine carp, rudd, and eels. The two top ones are public, but lucky is he who can entice one of the old stagers these contain. After leaving the ponds, it runs, forming a very inconsiderable brook, to Bromley, thence, through private grounds, to South End, Lewisham, where it opens out, and here we get the best of the river's very poor fishing. At this spot there are one or two trout and pike, a few perch, roach, dace, gudgeon, eels, and minnows. From here it runs to Catford, where it is joined by another stream, which has its rise near Norwood (this may have given rise to your correspondent's error), and, combining, they run by Catford Bridge to Ladywell and Lewisham, and finally into the Thames at Deptford. At the latter place it is called the Deptford Creek.

The only portions fit for stocking, supposing these could be obtained, would be the stretch above the second mill at South End, and the portions between the Ladywell and Lewisham railway stations, both of which, of course, are strictly private.—I am, &c.,

Ravensbourne.

[We think our correspondent's derivation of the name of the stream should not go beyond the Anglo-Saxon, unless there is evidence that the stream ever had a Latin name. In some cases Latin names given to our streams (or more probably to the Roman towns on those streams) have been retained to the present day.—Ed.]

FISHING-ROD TAKEN IN MISTAKE.

Sir,—The angler who took a trolling rod and telescope landing handle from the Rye House parlour, on Sunday, November 5, to catch the 7.15 p.m. train to London, may have his own he left behind on application to R. Ghurney, 10, Beeches Street, Charles Square, Hoxton, N.

Description of rod, &c., taken:—Cane trolling rod, three tops, one fitted with steel revolving ring; five joint; telescope landing handle, bag capped at bottom with leather.

Description of rod left in mistake:—Cane trolling rod, whalebone top; an umbrella stick, fitted with ferrule, for landing handle; bag slightly torn.—I am, &c., R. Ghurney.

KEEPERS *v.* ANGLERS.

Sir,—In answer to Mr. Wolfall's inquiry in your issue of the 25th November last, by section 24 of the 24th and 25th Vict., chapter 96, any one taking fish in a private fishery is guilty of a misdemeanour, and liable to a penalty of £5 over and above the value of the fish; and by the 25th section, the owner of the ground, water, or fishery where any person is found unlawfully fishing, his servant, or any person authorised by him, may demand any implement for taking or destroying fish in the possession of the offender, and if he shall not immediately deliver it up, the same may seize and take the same for the use of such owner; but the person from whom the same is taken is exempted from the penalty.—I am, &c., Wm. Boydell.

15, Warwick Court, Gray's Inn, W.C.,
December 5, 1882.

THE LEDGER PATERNOSTER.

Sir,—Mr. J. H. Keene, in his "Practical Fisherman," states in reference to live baiting for pike:—"For deep or rapid streams I attach great value to the ledger paternoster, such as is used at the Welsh Harp water continually." But he does not describe it. For the benefit of myself and other amateur fishermen who may be interested in the matter, would you kindly state in a foot-note to this letter how this paternoster is rigged up and used?—I am, &c., Piscator.

[The "Ledger Paternoster" is merely an ordinary paternoster used generally without float. To make one, fasten a lead to the end of the gimp or gut trace; then fasten a paternoster hook on gimp about 2 feet from the lead; but this point, as also the size of the lead, depends on the depth and strength of the stream. This is a very useful form of tackle for roving for jack. You throw out to some spot; let the bait have a swim or two there; then pull in a yard or two, and wait again, and so on until you reach the edge, and then you make a fresh throw. In this way you can search a water very thoroughly, and know that your bait must be seen by the fish. You can use two hooks, or three if necessary, as in the ordinary paternoster, and they should be fastened so as to revolve round the line.—Ed.]

PERCH FROM DAGENHAM.

Sir,—I have read in your valuable paper once or twice lately of several large perch having been captured from the lake at Dagenham. I beg to inform you that while fishing in that water for roach on October 13, 1859, I myself took a fine specimen of that noble fish, in splendid condition, weighing $3\frac{1}{2}$ lb. I was fishing very fine, with tight line, gentle, and No. 10 hook. The fish was very game, but after a sharp struggle (in which your humble servant came off victorious) I succeeded in bringing it to net. I had it preserved, and it takes a prominent place in my collection. On October 13, 1869 (ten years later to the day), I was fishing in my punt abreast the boat lock at Teddington for roach, dace, &c. I put out a paternoster with two small dace on as bait for jack, when, just before dusk, I observed my line quietly travelling up stream. I at once saw something had taken my bait. I took hold of the rod and gave a gentle strike. Away went the fish at a great pace down stream. After a little patience and time, in which he played me not a few pranks, I managed to turn him. He then came rapidly up stream, under the punt, and getting round two punt poles, or ripecks, I feared lest I should lose him; but, fortunately, my friend who was with me, aided by Ben Stevens, the fisherman, assisted me in safely passing the rod between the punt and poles. By this time my fish was nearly exhausted, and with a little care I succeeded at last in landing a splendid barbel of $10\frac{1}{2}$ lb. (not anglers' weight). I sent it to Messrs. Little, of 15, Fetter Lane, for preservation, and need hardly say it was set up to my satisfaction and to the credit of those who preserved it.

I should have mentioned that Ben Stevens, the fisherman alluded to, was not with me, but had placed his head pole close to the one at the stern of my punt, and we were thus fishing in the same straight line; hence it was the fish got round two poles.—I am, &c., H. Dickinson.

West-by-Thames, Kingston, Dec. 4.

FEATHERS, FLIES, &c.

Sir,—Blue dun as applied to the colour of fowls is not a self or original colour, I fully believe, but is the result of a cross with black and white fowls. Dun fowls are often met with in farm yards in all parts of the country—quite by chance, as it were, and the result of a mixture of black Spanish and white fowls The blue feathers of such first cross being not clear in the fibre, and worthless for fly-tying. The feathers from blue dun game fowls are infinitely superior in clearness of colour, and fineness of fibre and stem, to those of Andalusians. I find that however long I breed in (by which I mean breeding duns with duns, and changing the blood sometimes, but not the colour), out of every brood of chicks the original colours of black and white are produced. During the past summer, out of several broods from pure blue dun fowls, I have had black, white, and dun chicks. Some years since I had a breed of blue dun game bantams. The same thing occurred in the chickens. I never use black cocks after having obtained a strain of blue hens—black breasted red cocks, occasionally, and at other times blue dun cocks.

Your correspondent "Bittern," in Gazette of December 2, considers blue hackles tinged wth brown and brassy colour at edges as unsuitable for blue dun flies. I may have been in error, for I have always been aiming at producing grizzle or brassy cock's hackles, and getting a golden yellow edge to my hen's hackles—called commonly honey duns. Grizzle cock's hackles, when looked at through the light, are clear blue. There is not much difficulty in breeding blue duns, but a considerable amount of trouble and often disappointment in getting good honey duns.

If "Bittern" will obtain D. Foster's "Scientific Angler," he will see how and when to work the red caterpillar. I can quite endorse "Bittern's" remarks as to the difficulty of getting good furnace hackles. The foregoing remarks are the result of my own experience only, and I am quite open to correction, my object being to help my fellow anglers and to advance what I may term the science of breeding for colour in fowls.—I am, &c., W. T. H.

Macclesfield.

ANDALUSIAN FOWLS.

Sir,—I notice a good deal of correspondence among fly-fishers about Andalusian fowls. I keep this breed, and as I cannot otherwise dispose of the cocks, I am going to kill some, though it seems a great pity.—I am, &c.,

P.

[If any of our readers would like to buy some of the birds, they can have "P.'s" address from us.—Ed.]

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

FACEACHE, TOOTHACHE, PAINS IN THE GUMS, NEURALGIA.—Adam Smith's Neuralgine is a Certain Cure. Bottles, 1s. $1\frac{1}{2}$d., 2s. 9d. Post free from Proprietor, Chemist, Wednesbury. London Agent, W. Edwards, 157, Queen Victoria Street; and all chemists.

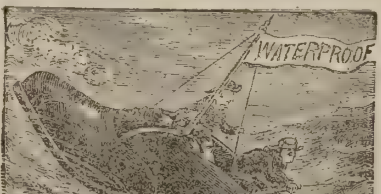
Postal and Telegraph, Torcross, near Kingsbridge, South Devon.

Torcross is about 20 miles south of Torquay—the mildest climate in England for winter fishing.

FISHING & SHOOTING SEASON

NO SPORTSMAN should leave for the RIVERS OR MOORS without having his Boots dressed with

STRAWSON'S WATER-PROOF.



This Waterproof has obtained a world-wide reputation, and has been used by the leading Sportsmen for upwards of Twenty Years. It does not act like a varnish, by hardening on the surface of the leather, but penetrates the fibre, softening and preserving it. Shooting and other Boots dressed with it will resist the action of Dew, Rain, Snow, and Sea Water. It is especially good for keeping the Soles of Boots and Shoes Waterproof, increasing the comfort of the wearer by its softening effects on the leather, helping to prevent blisters and chafing to the foot.

All Classes who are exposed to the many changes in the weather should use it as a matter of economy in preserving their Boots, and preserving their health, by keeping their feet dry.

Opinion of a well known Angler—

"I have often stated (and always asserted in my books) my belief that your Waterproofing is the BEST IN THE WORLD for sporting purposes, and indeed the only one which will keep out Melting Snow.'

Yours truly, H. CHOLMONDELEY PENNELL.

Sold Retail by all Boot and Shoe Makers, Saddlers and others in Tins, price 2d., 4d. 8d., 1s., 2s., 5s. & 10s. each.

Important Offer to the Readers of THE FISHING GAZETTE.

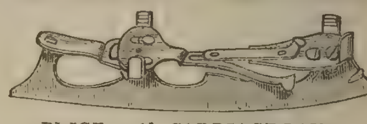
SKATES! SKATES!! SKATES!!!

AT PRICES TO SUIT ALL.

THE extreme mildness of last winter, and the consequent depression in the Skate trade, enabled us early in the spring of the present year to purchase for CASH a Manufacturer's stock, comprising 5000 pairs, at a price never before known in the English markets, and we now offer them to the readers of this journal at an unprecedentedly low price; and, in order to effect an immediate clearance of the entire stock, we have made special arrangements with Messrs Sutton and Co. to send all parcels CARRIAGE PAID. This, we feel sure, will meet with the cordial support of the thousands of readers of the Fishing Gazette who have hitherto favoured us with their patronage.

CONDITIONS OF SALE.—As soon as you receive the Skates, if not well satisfied with your bargain, write to us, and we will return you the money.

ACME SKATES! ACME SKATES!!

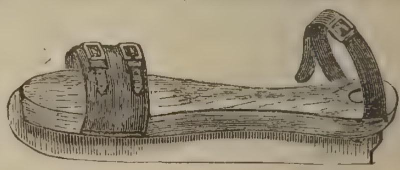


PRICE 5s. 6d., CARRIAGE PAID.
If stamps, 3d. extra.
Sizes—8½ 9, 9½, 10, 10½, 11, and 11½ inches.
All Sizes one Price.

The above pattern is too well known to require either description or comment. We need only say that they are of A1 quality, warranted steel blades, best finish and workmanship, and we guarantee them equal to any Skates usually retailed at half-a-guinea per pair.

Very superior quality ditto, beautifully nickel-plated, price 10s. 6d. per pair, carriage paid.

Hard Polished Wood, with Broad Toe Strap.



PRICE 3s. 6d. CARRIAGE PAID.
If Stamps, 3d. extra.
Sizes—8, 8½, 9, 9½, 10, 10½, 11, and 11½ inches.
All Sizes one Price.

This is our speciality in Wood Skates, and they are a marvel at the price. Each pair is polished all over, and fitted with two broad toe and heel straps, made of best leather and hand-sewn. The blades are well steeled, and in appearance and wear are unequalled by those costing treble the money.

This pattern can also be had in polished Walnut, with brass toe caps, and fitted with best leather straps. Price 5s. 6d., or 69 stamps, carriage paid.

Hundreds of testimonials from all parts of England, Ireland, Scotland, and the Continent.

As a great rush of orders is expected, early application to ensure immediate delivery will be necessary. Orders will be executed in rotation, and when possible same day as received, and despatched per Sutton and Co., carriage paid. Size of Skates should be ascertained by measuring the full length of boot from toe to heel.

Send for a pair, and if you are not satisfied and amazed, have your money back

Our Illustrated List of Skates and other Specialities will be sent post free on application.

P.O.O.'s payable at the G.P.O., London, to **DRALLIM and OLIVER, 18, Ironmonger Lane, London, E.C., (and at Croydon).** Please mention this Paper.

LONDON, E.C.

LONDON and COUNTY ADVANCE and DISCOUNT COMPANY (Limited).

Cash advances from £10 to £500, without preliminary fees, or deduction for interest, for short or long periods, repayable by easy instalments, at moderate rates, upon personal security, life policies, Furniture without removal, deeds, shares, bonds, &c. Bills discounted. Forms gratis. Offices, New Courts Chambers, No. 57 and 58, Chancery Lane, E.C.

JOHN STONE, Secretary.

The Fishing Gazette.

SATURDAY, DECEMBER 16, 1882.

ESTABLISHMENT OF A NATIONAL FISH CULTURE ASSOCIATION.

[Copy of a circular which has been sent out to gentlemen interested in the subject.]

“Sir,—Knowing that you are interested in the subject of fish culture, we beg to ask if you will kindly attend a meeting under the presidency of Edward Birkbeck, Esq., M.P., which is to be held at three o’clock on Wednesday, 20th December, 1882, at the Fishmongers’ Hall, London Bridge, kindly lent by the Worshipful Company of Fishmongers for the occasion.

“The object of the meeting is to form a ‘National Fish Culture Association of Great Britain and Ireland.’ We feel sure you will agree with us that such a society is wanted, and has an immense field open for it. At present all British effort in fish culture is individual effort, and not only do the public generally know little of what is being done, but our fish culturists themselves are often quite ignorant of what other labourers in the same field are doing; as proof of this, we may mention the difficulty we have experienced in getting the names and addresses of fish culturists, and we are aware that there are many whose names we have failed to obtain.

“We know from experience that in this country an increasing interest is being taken in fish culture and fish farming of all kinds; in other countries, including our own colonies, fish cultural societies are doing most valuable work. In view of these facts, and also of that Great International Fisheries Exhibition which is to be opened in London next year by her Majesty the Queen, it is unquestionably most desirable that such a society as we have referred to should be formed. It will, of course, be in no sense a commercial undertaking, but purely a scientific society, established on the simplest and broadest foundations, viz., ‘to promote the interests of inland and sea fish culture of all kinds in the best way possible.’

“Further details will be explained at the meeting. The following gentlemen have promised to support the movement:—The Marquis of Exeter, Sir James Gibson Maitland, Bart., Mr. E. Birkbeck, M.P., Lieut-Col. Custance, Mr. C. L. Buxton, Mr. T. J. Mann, Dr. Francis Day, Mr. Greville Fennell, Mr. Francis Francis, of the *Field*, Mr. C. C. Capel, Mr. J. A. Youl, Mr. H. Ffennell, of *Land and Water*, Mr. William Senior, of the *Daily News* and *Bell’e Life*, Mr. J. P. Wheeldon, of the *Yachting Gazette*, and many others.

“Will you kindly inform us if it will be convenient for you to be present at the meeting; or if you cannot attend, we should be glad to hear from you that the movement has your good wishes.

“We are, Sir, yours faithfully,
“W. Oldham Chambers,
(“Hon. Sec. Norfolk and Suffolk Acclimatisation Society.)
“R. B. Marston,
(“Editor, Fishing Gazette.”)

(Please reply to R. B. Marston, Crown Buildings, 188, Fleet Street, London.)

DISCUSSIONS AT THE OCCABOT CLUB.

By the Secretary.

Tweezer.—“A fire is very comforting this weather, eh, Swivel?”

Swivel.—“Very much so, especially if you happen to be insured!”

The members of the club were dropping in one by one, rubbing their hands, evidently glad to get out of the raw, foggy, nipping night air.

Ledger.—“Has anybody seen Plummet lately?”

Tweezer.—“He will turn up presently. I met him at Abingdon on Tuesday; told me he was staying at the house of a client of his, working the jack in some old moat there. Wonderful place for fish, I believe.”

Ledger.—“What an enthusiast that man is! All his clients seem to have good jack waters, and his chief business seems to be to ‘work them.’ ”

Gaff.—“Pray do not bring up that knotty Nottingham question again; I hear he is anything but pleased at the way he has been handled in the Gazette by ‘V.’ ”

Plummet.—“ ‘V.’? Who’s ‘V,” I should like to know? Cannot a man describe the style of fishing he likes best without being called a fool?”

Tweezer.—“Halloa, old man! thought you were miles away. Who has been ruffling your feathers?”

Gaff.—“What, have you not seen the correspondence in the Gazette, caused by our friend here, the secretary, sending an account of one of our meetings?”

Plummet.—“That ‘Thames-Nottingham’ is a sensible man—knows what he is writing about; but as for ‘V.,” he——”

Ledger.—“Writes very sensibly too, I think; and in spite of your injured tone, Plummet, I know you are the last man to grumble because another man does not think quite as you do.”

Plummet.—“I don’t grumble at that. What I don’t like is his dictatorial style—the only way to hold a Nottingham rod is the way *he* holds it. As if a man cannot please himself.”

Ledger.—“Well, there’s no harm done; there is nothing like discussion for getting at the bottom of things, and the conclusion I have come to is that there is a great deal to be said for both styles of fishing, Thames and Nottingham. You certainly said ‘V.’s style of holding the rod was perhaps the best, but that you preferred the other, and there I think ‘V.’ was a little hard on you; but you have ‘Thames-Nottingham,’ ‘Scot,’ and others on your side. I think I have more cause to grumble at ‘V.’ than you, for he took on himself to use my name pretty freely.”

Red-spinner.—“I confess, Plummet, your description of the Nottingham style interested me considerably; in fact, I have bought a Nottingham reel and been practising for a week past.”

Split-shot.—“What, Red-spinner going in for coarse fishing? Well, that is a revolution! Pass the whisky bottle.”

Red-spinner.—Not so fast, friend; I am not converted yet, and not likely to be, as long as there are salmon and trout and grayling to be caught. What I was going to remark was, that Plummet’s description of a man walking along a bank covered with long grass and bushes, or wading a shallow and spinning as comfortably as possible from the reel, gave me an idea which I intend to work out next trout season.”

Plummet.—“And what is that?”

Red-spinner.—“Well, I think I see my way to use that favourite style of yours in spinning for trout. You see, I have my share of trout fishing with the fly, and when that is even moderately good, I never try anything else; but at times, when the fish are feeding on larvæ and fry, nothing will lure them to the surface; then I use the worm—in clear waters only, mind you—or the minnow. I never was much of a hand at spinning, and the difficulty I find in getting my minnow out thirty yards or so without catching the loose line in twigs, &c., on the bank, and the necessity of being on the bank to make a cast at all, have often induced me to give it up in disgust. I had half made up my mind to learn casting with the line coiled round the thumb and fingers of the left hand, until I read Plummet’s panegyric on the Nottingham reel. It had never till then occurred to me that this was the very thing I was in want of, and, as I said before, I have been practising casting from the reel, with a view to using that method next trout season, and by following Plummet’s directions, modified, I must own, by some hints from ‘V.’ and other writers in the Gazette, I think I have ‘collared the bowling,’—in other words, controlled the winch.”

Plummet.—“Capital, I can almost forgive ‘V.’s sarcastic remarks if they have helped to convert such an old hand as Red-spinner, for, in spite of his modest assertion, I know he could hold his own with most men in spinning for trout in the Thames style. But you can’t take a boat up a rocky trout stream; in fact, the warmest advocates of the Thames style admit that a boat is a necessity, so that style is practically confined to comparatively a small part of the fishable water in a country.”

Blue Dun.—“May I ask you, Red-spinner, if you did not find your minnow rather a light weight to throw from the reel?”

Red-spinner.—“That was my difficulty. I found that I had to use a rather heavy lead as well as the lead cap on the minnow. You know I always use Hawker’s tackle when fishing the natural minnow, and the lead made too much splash to answer well in a broad, shallow trout stream, so I tried the Nottingham plan when float-fishing. I put one or two swan shot on the trace about a foot apart, and I found it answered admirably. I can get out thirty yards of line easily, and that, with the additional advantage of being able to wade as I cast, will enable me to reach even the most inaccessible parts of the roughest trout streams.”

Blue Dun.—“I have fished on most of our trout streams for the last half century nearly, and I never yet saw an angler using the Nottingham reel in spinning for trout, but in theory I see no reason why it should not prove a most valuable plan. Indeed, it was only the other day I saw a letter in the Gazette signed ‘Scot’—evidently a good all-round trout and salmon angler, from his style of writing—in which he describes the success a friend of his had in Norway, spinning from the reel for salmon, when other anglers could not get at the fish. But here comes Richmond! Welcome, fair Sir, biggest and best of chairmen and honoured guest of the Occabots."

Richmond.—"Gentlemen, your courteous reception o'erwhelms me. May I ask who is the father—excuse me, I should say the president—of your society?"

Tweezer.—"We are all fathers, all presidents."

Richmond.—"Delightful; but this letter of invitation to my most unworthy self is signed by the president of the Occabot Club?"

Plummet.—"Worthy Richmond, a word of explanation: by the unwritten laws of the club, every member must in turn be president, secretary, and treasurer."

Richmond.—"Ah, ah; now I see; then I take it you will *each* get a testimonial!"

THAMES FISHING AND THE RICHMOND PISCATORIALS.

THE long cessation of hostilities against the fish in the river Thames has been most discouraging to the army of anglers who are always ready to wage war against them, and who for some time have been eager for the fray. The pioneers, or in other words, the professional fishermen, like so many spies, have been watching the receding and advance of the flood, in order to invite their clients to some scene of action, each week indicating favourable prospects which have not been fully realised. Occasionally some of the skilful members have been at work with varying success, and the members of the Richmond Piscatorial Society have been fishing in the tidal waters with a certain amount of satisfactory results. The place selected was between Richmond Bridge and Teddington, and another portion has since been chalked out below Brentford Ferry. The worthy secretary is most sanguine as to the success of operations in the latter district. He says he has seen fish caught as low down as Mortlake, as large as he has ever witnessed—and he has seen a few in his time. There can be no doubt about this, and as some good prizes are to be fished for, it is hoped the water will be in condition to exhibit substantial evidence of first-rate sport. Some of the members are old hands at roach and dace fishing, and it may be that this competition will add fresh laurels to their well-known fame. In the last contest the size of the fish was fixed above the Thames standard, or results might have been different. There is no doubt that they would, for the winner of the second prize, had the size been the Thames standard, would have increased the weight of the fish fully four-fold. The approaching competition on Wednesday, the 13th of December, will be regarded with some interest and test the value of the fishing-ground as far as Kew Bridge, at which point it is hoped ere long, netting will be abolished. There can be no doubt the Richmond Piscatorials are a strong and active body of anglers, and have the interests of the tidal waters greatly at heart. The portion of water below Teddington is largely patronised by all classes of anglers. When the last census was taken of the number of punts used for angling purposes at Richmond, Twickenham, and Teddington, in July, 1881, there were registered no fewer than seventy-one, Twickenham, of course, possessing the larger quantity. Then as regards bank-fishers in those places, the members have been daily represented in three figures. Now it not unfrequently happens that the number of anglers in one punt is four, and seldom less than three. It would be difficult to make an approximation of the number of anglers visiting the tidal waters in the course of one season—it may safely be computed by thousands. But it all comes to this—that the tideway requires very great consideration. It is the great fishing place of London anglers, and so long as the sport is conducted on true sportsmanlike principles, everything should be done to promote their interests; but, first of all, let the anglers show their appreciation, which they have never yet fairly done, of the work of preservation and protection, and then means will be afforded to accomplish more desirable results. The great body of anglers have not as yet secured a very good name for rendering pecuniary assistance, and in far too many cases they have been found more ready to listen to idle gossip and worthless reports, so as to make an excuse for not giving, than by coming forward as men and contributing, as they ought to do, to erect the standard of fish preservation over the grave of poaching and all unfair fishing.

B.

* [This was crowded out last week; but the account of the match referred to will be found in this issue, we hope. If some of our "Roachers" would try ledgering for roach *below Waterloo Bridge*, we think they would get them "on," and to some tune, too..—Ed.]

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

THE LAW AS TO FISHING IN PRIVATE FISHERIES, &c.

A CORRESPONDENT recently asked for some information respecting the question whether a keeper or owner of a fishery, finding an angler trespassing, has the right to seize the angler's rod, tackle, &c. The following extracts from that most valuable work, Oke's "Fishery Laws," edited by Mr. Willis Bund, M.A., will settle the question:—

"The tackle of fishers may be seized," (Sec. 25 of the Larceny Consolidated Act of 1861, applicable to England and Ireland, 24 and 25 Vict., c. 96)—"If any person shall at any time be found fishing against the provisions of this act, the owner of the ground, water, or fishery where such offender shall be so found, his servant, or any person authorised by him, may demand from such offender any rod, line, hook, net, or other implement for taking or destroying fish which shall then be in his possession, and in case such offender shall not immediately deliver up the same, may seize and take the same from him for the use of such owner; provided, that any person angling against the provisions of this act, between the beginning of the first hour before sunrise, and the expiration of the first hour after sunset, from which any implement used by anglers shall be taken, or by whom the same shall be so delivered up, shall, by the taking or delivering thereof, be exempted from the payment of any damages or penalty for such angling."

Under this section a summary and very useful power is given to owners of lands, water, or fisheries, to stop trespassers angling in the daytime. Care should be taken in exercising this power, for if it is irregularly done, or more taken than the law allows, the angler would have an action against the person who seized his tackle. It will be observed, therefore—

(1.) That only the owner, his servant, or some person authorised by him, can seize; therefore no occupier or tenant of the fishery, for a term of years however long, can do it, or authorise any other person to do it.

(2.) The seizure must be made on the owner's ground. If a man is fishing in a field, and on the owner coming up goes into another not the property of the same owner, no seizure can be made.

(3.) It is only the implements used for taking or destroying fish—rod, line, hook, net, or other implement—that can be taken; not the basket or the fish caught.

With regard to angling, the seizure exempts the angler from any further penalty, civil or criminal. It is not so, however, with a person fishing in any other way; his nets or implements may be seized, and he is liable to be prosecuted under the 24 and 25 Vict., c. 96, s. 24; or a civil action may be brought against him.

"Arrest of Angler."—An angler in the daytime—that is, between the beginning of the last hour before sunrise and the expiration of the last hour after sunset—cannot be arrested; but a person angling at night, or fishing by any other means than angling, either by day or night, may be arrested there and then without warrant by any person, and taken at once before a magistrate.

In addition to these remedies, an angler, if his tackle is not seized, is liable to criminal proceedings, or an action.

"Property in Fish Caught."—If a person illegally takes fish, it appears that he, not the owner of the fishery, is entitled to them; and if they are taken by angling, the owner would seem to have no remedy to recover them or their value. If taken by means other than angling, the owner can recover. The property, however, in the fish seems to belong to the person taking them. This is, of course, subject to the qualification that under certain acts certain fish—*e. g.*, salmon—are forfeited.

MR. JARDINE'S PERFECTED SNAP FOR PIKE FISHING.

WE know very many of our readers will be glad to see the following note from Mr. Jardine, and we, in their names, thank him for giving his invention to the angling world. Wood engravings of the tackle are in hand, and will be published with Mr. J.'s description next week if possible.—Ed.

"Dear Mr. Marston,—I have much pleasure in giving my guinea towards the fund 'for netting the reservoirs,' of which you are treasurer—cheque is enclosed—and I now furnish you with illustrations and description of my pike-snap, which I think I have much improved, if not, indeed, made perfect. I used them a short while since, and out of 18 runs, caught 17 pike and jack—one just under 20 lb. As soon as the waters clear and get into condition for 'piking,' I shall go on the 'warpath.' Are you likewise disposed? A happy Christmas and a merry one to you and yours—also a prosperous new year.—Truly yours,

Alfred G. Jardine.

[Many thanks, Mr. J. We say—with the Colonel—"Why, certainly."—Ed.]

Wair there's smouke there's fire, 'en very auf'en bad bakky or a wuss cigar.—*The Kaukneigh Awlminek.*

THE EXE FISHERIES AND ASSOCIATIONS.

From an Article by "Old Log" in the *Field*.

In a land of many waters, the Exe stands out as the largest and most important river of them all; and, keeping itself distinct from the network of streams which, springing from the heights of Dartmoor, traverse its slopes towards the Bristol Channel on the north, and to Torbay on the south, it runs through a beautiful valley of its own, fertilises the richest agricultural districts, and gives its name to the capital of the county. From its earliest sources on Exmoor at the extreme north, to its broad and navigable estuary at Exmouth, on the southern coast, it furnishes an almost unbroken series of more or less profitable fisheries.

It introduces one of its pleasantest and perhaps best-known fisheries when it enters the county of Devonshire, near Dulverton. On these happy shores you may meet all sorts of acquaintances from the most unexpected quarters of the world; and, though there is a variety of waters in different directions, you are pretty sure to see a rod or two waving in the field ahead of you, wherever you may seek for the solitude that delights an angler; for it seems to be the stereotyped answer to every querist, and the invariable advice to every piscatorial stranger, to go and try the fishing at Dulverton.

In spite of all this, there is no doubt that this too popular angler's resort is a very pleasant billet, and that the scenery is charming.

After receiving the ample tribute of the Barle, the Exe naturally assumes the dignity of a full-grown river of considerable size and importance; and every portion of its lower waters is claimed and guarded by the riparian owners, and the fishing clubs along the rest, of course, down to its tidal estuary. Probably the best trout-fishing in the whole river is comprised within the twenty miles or so of water between its confluence with the Barle and its reception of the waters of the Culme just contaminated with the off-pourings of the adjacent paper mills, a few miles above Exeter. Within this space there are no less than three distinct clubs, besides small intervals of private water. The largest and best of the open clubs is that at Tiverton, which extends its jurisdiction over a stretch of some six or seven miles, and, very wisely keeping the fishing to a select few, carefully protects it, so that it is rarely overcrowded with rival anglers. There are, however, some intermediate spaces reserved in the hands of private riparian owners, which, of course, are equally good, if not better, in comparison with the public fishery.

Below the Tiverton Fishing Club water there is a less restricted fishery, which would probably be flogged to death if it were not somewhat difficult of access. The head-quarters of this club are located at the little hamlet of Thorverton, which stands on the summit of a hill that is almost peninsularised by the circuitous course of the river. There are comfortable fishing quarters here, but they lie out of the track of railways, and have to be approached by a drive of several miles from either Tiverton or the small station of Stoke Canon on the Great Western line. I have spent some pleasant days at Thorverton, from whence there is a facile descent to various parts of the river, of which it would be difficult to say which is the best. Below this there is a large pool to be execrated and avoided by the fly-fisher, in which the local authorities boast that there is a grand old family of pike, who must have a merry time of it, and very pretty feeding on the young trout; and then, after passing some private water, you come on the domains of the United Exe Fishery Association. As the upper part of this fishery runs within half-a-mile of Stoke Canon station on the railway, and the lower portion within an easy walk of Exeter, it is apt to be a little crowded by the worthy citizens; and probably the trout have generally been well instructed as to the difference between a natural and an artificial fly.

HINTS TO AMATEURS ON THE TREATMENT OF OVA AND FRY OF SALMONIDÆ.

By T. Andrews, Westgate House, Guildford.

Ova.

Ova must be kept in running water at a temperature between 45 deg. and 55 deg.; the lower is preferable.

Two inches of water over the eggs is ample.

If the hatching trough is of wood it should be carbonised, or coated with asphalte varnish. The bottom should be covered with half an inch of prepared gravel or shingle.

The size of the hatching trough, and the quantity of water, depend on the number of eggs to be hatched.

All dead eggs turn opaque white, and must be picked out with forceps every day. When the eggs are hatched, the empty shells must be removed. To do this, draw off the water into a pail, and the shells can be poured away. The hatched fish must be returned to the trough, and allowed to remain there until the umbilical sac is absorbed.

Fry.

As soon as the sac is absorbed the fish require food; and if a suitable rearing place is ready it is best to turn them out at once. A suitable place is a small pond, or a part of a stream, where there are no fish of any kind, and where natural food of trout is to be found.

Natural food is crustacea, mollusca, larva, flies, &c. The rearing place should be fenced securely to prevent the young fish from getting away, and also to stop any larger fish from getting into it.

Artificial food, in the shape of grated liver, small worms, and gentles may also be used.

It is not desirable to keep many young fish in the hatching troughs after they begin to feed.

At ten to twelve months old the fish should be from five to eight inches long, and they may, with comparative safety, be turned into the main water with other trout; but as trout are cannibals, it is better to keep the different sizes separate, or in other words, not to put trout of 3 or 4 oz. with fish of a pound. When they have grown to ½ or ¾ lb. each there is little to fear, except, perhaps, from overfishing or poaching, or scarcity of food. No other fish should be allowed to remain in the same water with salmonidæ.

THE GRESHAM ANGLING SOCIETY.

The meeting on Tuesday last was not so largely attended as on some previous occasions, but was nevertheless of considerable interest. Mr. C. S. Bentley occupied the chair. The secretary announced that some good takes of pike had been registered during the week, Mr. G. R. Hunt heading the list with 86 lb. 4 oz., the largest of this splendid bag going 16 lb. 4 oz. Mr. John Groom weighed in five, which turned the scales at 53 lb. 4 oz., the largest being a fish of 16 lb. 8 oz., and the smallest 6 lb. Captain Alfred again weighed in, his four pike weighing 27 lb. 12 oz., the largest 10 lb. The whole of these were taken in private water. It is to be hoped members will sometimes avail themselves of the kindly offer of Messrs. Brooke and Sons to store their fish to show them on the meeting nights. These gentlemen have adopted the very latest improvements of the Bell Coleman Refrigerator Company, using gas as the motive power, and the utility of the invention will be understood when it is known that several million pounds' worth of meat, fish, and vegetables have been successfully imported from very distant countries by its means.

The society purposes having a special musical evening on Tuesday next, when a number of musicians and vocalists have kindly offered to supplement the talent of the members, so that an unusually pleasant evening may be anticipated. Mr. Charles Bates will read the next paper before the society—subject, "Perch Fishing"—on the first Tuesday in the new year, and others will follow at regular intervals. Visitors are welcome to attend either of these gatherings.

NORWICH PISCATORIAL SOCIETY.

This flourishing society celebrated the close of the third year of its existence on Thursday, the 7th inst., when the annual dinner took place at the club house, Walnut Tree Shades, under the genial presidency of Charles Daniels, Esq., president of the society. After ample justice had been done to a most sumptuous repast, provided by Hostess Cox in a manner that left nothing to be desired, the cloth was removed, and the real business of the evening began. Mr. Daniels took the chair, having Mr. F. F. Bradley, chairman-elect of the society, in the vice-chair, and being supported by Messrs. C. J. Greene, hon. sec. of the Yare Preservation Society; G. Daniels, president Champion Angling Club; R. Moll, hon. sec. Norwich Angling Club, and local representative of the Fishing Gazette; W. G. Capon, hon. sec., and a large number of the members of the club and visitors. The toast of "The Queen and Prince and Princess of Wales and the Royal Family" having been proposed by the chairman, was drunk with musical honours, Messrs. J. D. Turner and E. H. Corbyn rendering the respective solos. The toast of "The Army, Navy, and Volunteers" was responded to by Sergeant Wilkins for the Army and Sergeant A. S. Wilde and M. Grensfield for the Volunteers. The toast of the evening, that of "The Norwich Piscatorial Society," was coupled with the name of the hon. sec., Mr. Capon, and served as an opportunity for the chairman to present to Mr. Capon a silver sugar-basin and cream-jug, together with an address, which had been subscribed for by the members in token of their appreciation of his services. Mr. Capon, who was entirely taken by surprise, thanked the members most heartily for their most handsome present, which he received as showing that the members thought he had done his best for the society—a course he was ready and willing to continue in the future. The toasts of "The President," drunk with musical honours, "The Vice-Chairman," and "The Committee" followed. Mr. Howitt then proposed "The Yare and Bure Preservation and Kindred Societies," coupling with it the name of Mr. C. J. Greene. The hon. sec., in reply, referred to the work which had been done by the society, and argued that, as all present participated in the benefits it conferred, the least they could do was to make a point of becoming members. Among the concessions the society had obtained he noticed the early morning train, reduction of fares to anglers, late train in the summer months, &c., as showing that beyond preserving the rivers the society had not been idle in other directions. Mr. Greene also announced that he had that morning received a notice from the mayor consenting to convene a meeting to protest against the continuance of illegal netting, and to consider the means to be adopted to prevent it. The toast of "The Press," was responded to by Mr. Moll, who noticed the arrangements he had made for obtaining the state of the river at the various fishing stations, and urged that all members of the club should obtain weekly a copy of the Fishing Gazette. Other toasts followed. The enjoyment of the evening was much enhanced by the capital singing of Messrs. Edwin H. Corbyn, J. D. Turner, T. R. Newnam, E. H. Midland, F. F. Bradley, R. Bradley, and others, Sergeant Wilkins also favouring the company with a recitation, given in his usual effective style. Mr. R. Ford proved a most able accompanyist. J. D. T.

CLUB AND OTHER JOTTINGS.

By L. B.

Several London angling societies have, to my certain knowledge, decided to send selections from their collections of preserved fish for show at the Great International Fisheries Exhibition, 1883, and a number of others will doubtless follow the example thus set.

* * * * *

Mr. J. Gaze, of the Trafalgar Angling Club, took, while live-baiting in the old Wey, on Sunday last, a handsome chub, weighing 3 lb. 10½ oz.

* * * * *

The monthly meeting of the West Central Association of London and Provincial Angling Clubs will take place this (Friday) evening at the Portman Arms, Great Quebec Street, Baker Street. Among the business to be got through is the enrollment of several new angling societies.

* * * * *

The Fisheries Society, at its meeting on Monday last, decided to have half a dozen coarse fish propagation boxes built upon the lines of the model exhibited at the recent meeting at the Society of Arts Room by Mr. R. B. Marston, the said boxes to be placed in suitable waters during the coming spawning time. Nothing like being in time.

* * * * *

On Tuesday evening, Dec. 12, a No. 3 West Central Association meeting was paid the United Brothers' Angling Society, the Druid's Head, Broadway, Deptford. The chair was ably filled by Mr. Watts, who was faced in the vice by Mr. Tyler. The singing and pianoforte accompaniment were excellent, but the attendance was very small; possibly the near approach of the Christmas holidays and the severity of the weather were to some extent responsible for this. Among the societies represented were the South London, Bermondsey Brothers, City of London, and North-Western. Messrs. Bonvoisin and Field spoke a few words about the Great International Fisheries Exhibition, 1883, the Anglers' Benevolent Society, and kindred subjects.

* * * * *

The second smoking concert of the Watford Piscators took place in their club-room on Monday, the 4th inst. The chair was taken by Mr. Bowers, ably faced by Mr. C. Lovejoy. There was a large attendance. Some capital solos were sung by Messrs. Horn, Bowers, Spicer, Griffiths, Bigwood, Jefferies, Atherton, James, and Ambler. Pianoforte solos were played by Messrs. Williams and Bowers; Mr. Jefferies played a solo on the ocarina. A trio, which received great applause, was sung by Messrs. Horn, Spicer, and James. The next concert will be held on January 1st, 1883.

[It is good news to hear that the Lund hatching boxes are to be made and tried by the Society. We also intend to try one or two in a lake we have secured for the purpose. In making these boxes, it should be borne in mind that those to be placed in a river should have floats on each side to float them should there be a rise of water.—Ed.]

CLUB REPORTS.

AMICABLE BROTHERS ANGLING SOCIETY.

The 29th annual supper took place in the club room on Monday, December 11th. Forty-one sat down to a most excellent spread, placed on the table by the host—consisting of soups, boiled mutton, roast pork, roast beef, veal and ham, all vegetables in season, plum pudding, custards, cheese and celery, and all during supper Mr. Medcalf occupied the chair. Mr. Patrick in the vice; Mr. Cousin, pianist. The following gentlemen contributed to the harmony of the evening:—Messrs. Say, Field, Carrington, Lewis, Cousins, Fletcher, Robinson, senior; Larkman, Dwelley, Deasey, C. Mees, Hunt, Bonnem, Kelson, B. Chevalier, Taylor, Rory O'More. Ptizes given for the present season:—Mr. Pedley, silver pin; Mr. Gabb, value, 10s. 6d.; Mr. Medcalf, 15s.; Mr. Patrick, Lamp; Mr. Dwelley, two prizes; Mr. Say, value, 10s. 6d.; Mr. Robinson, junior, 10s. 6d.; Mr. Tinson, value 10s. 6d.; Mr. Squire, 10s. 6d.; Mr. B. Chevalier, 10s. 6d.; Mr. Lake, 10s. 6d.; Mr. Binks, 10s. 6d.; Mr. Robinson, senior, length of doeskin for trousers; Mr. Howlett, 12s. 6d.; Mr. Arnold, 12s.; Mr. Dauniehiem, sealskin cigar case; Mr. Willis, scarf pin; Mr. Lewis, 12s.; Mr. Moore, 10s. 6d.; Mr. Deasey, 10. 6d.; Mr. C. Mees, 10s. 6d.; Mr. Marshall, 15s.; Mr. Larkman, 15s.; Mr. Hunt, 15s. Mr. Medcalf presided with his usual good humour and genial smile, and the evening and morning passed off in a most satisfactory manner, the time being extended till two o'clock. The usual toast being given and responded to in a very able manner, Mr. Patrick sang the last song of the morning, and the pianist played "Auld Lang Syne" and the national anthem, which concluded. All departed, satisfied with everything.—J. Worledge.

BERMONDSEY BROTHERS ANGLING CLUB.

The members and friends held their half-yearly supper on Tuesday, the chair being taken by Mr. Grant, "Ye Rodney Piscatorials," Mr. Mitchell in the vice. After doing full justice to the fare provided, good songs were given by Messrs. Grant, Mitchell, Frost, Mills, Allen, Conn, &c., and after one of the pleasantest evenings the company separated at a late hour.—A. G. Croker, sec.

CITY OF LONDON ANGLING SOCIETY.

On the 3rd, only two members weighed in—Mr. Nitz, a jack, 2 lb. 7 oz., from the Rye House; and Mr. Castell, roach, from the Thames, at Wraysbury. Our pegged-down match, at Weybridge, on the 10th, ended in a blank, the combined effects of frost and fog being too much for us, and we were glad when it was time to pack up.—Cas.

FITZROY ANGLING CLUB.

The members of the above club, who hold their meetings at the Crown, Cleveland Street, Fitzroy Square, are still increasing in numbers, and if they progress at the same rate as at present, will soon be quite as numerous as many clubs that have been much longer established. They have had during the past week several good shows of fish, the best being that of Mr. Weaver, having a capital take of dace, from the Thames. Their meeting night is Tuesday; and anglers will meet with a good reception from their genial host and treasurer, Mr. Frank Kemp.—W. Hawesby, hon. sec.

Dec. 13.

GOOD INTENT ANGLING SOCIETY.

The members of the above club will fish a pegged-down match at St. Margrett's, on Sunday next, December 17. The first prize will be £2 and 20 lb. of beef, given by our treasurer, Mrs. Roberts; the second will be £1 1s. and leg of mutton; 3rd, £1 1s. and leg of pork; 4th, £1 1s. and bottle of brandy; and others at 10s. 6d. and bottles of spirits. Each member in the competition will pay 1s. that will make up other prizes. There was a good attendance of members at the club on Tuesday. Mr. Chas. Bates and Mr. Christie, from the Gresham, paid a visit to our club, and were most heartily received. Mr. Bates gave in his name to be a member, which was received with great applause. I am glad to say the members voted £1 1s. to the netting of reservoirs fund. I beg to forward the same, trusting other clubs will do the same, and support so worthy a fund.—R. Murphy.

GREAT NORTHERN BROTHERS.

The prizes fished for on Saturday last at Cookham and Bourne End were not all taken. Only six members weighed in—viz., Messrs. Young, F. Watling, G. Watling, Stammer, Theobald, and Armstrong. The remaining thirteen prizes will be fished for next Sunday.—J. A. Fitch, jun., sec.

GREAT YARMOUTH PISCATORIAL SOCIETY.

The above society held its meeting at the club-house, Mr. Lark's, St. George's, King Street, on Monday evening. Chair, Dr. Mitchell; vice-chair, Mr. Bonfellow. This society continues in its prosperity, having now added Burton Steward, Esq., ex-mayor, and Mr. F. Hill on its roll of honorary members. Some very interesting conversation was engaged in by the members present relating to the vast resources around Yarmouth for the pursuit of the science or the pleasure of true angling. The secretary presented the society with a splendid specimen of a perch, well set up by Mr. Lorne, of Fuller's Hill, in a suitable case. We also note that the president is the successful winner of the Fishing Gazette prize, being a bound volume (which he in turn presents to the society for the use of its members), which was given for the heaviest roach caught in November. Taking into consideration the weather we had in November, it was anything but promising near Yarmouth to stand with rod and line for roach. We only hope the railway company will grant tickets available the same as in summer, so that our London friends can give us Yarmouthians a lesson, which I know they will not be backward in, for we have much to thank many for, considering how new our society is, and the courteous manner in which we have been assisted in many matters, and in return all we can say is, If you come to Yarmouth we will give you, from our society, all the assistance possible. Some of our friends have already sent for a list of prizes, but they will pardon me when I tell them our funds will not yet admit it. Remember, we started on *nil* in the exchequer, and we are not in debt now, and we are not six months old. Next year we shall, I hope, have a surplus which could be used to contest rights and put down illegal fishing; in fact, this society is determined to do so if it gets supported, which I am convinced it will, and heartily, too, when the summer comes.—J. Lark, sec.

HAMMERSMITH UNITED ANGLING SOCIEY.

On November 29, Mr. Geen had a good chub, weighing 3 lb. 9½ oz, and perch and roach, from Handborough; and on the 30th, he had roach from the same place. Mr. Lewis, on the same day, took a roach, between Kew and Putney Bridge, weighing 13½ oz.; Mr. Hobden had roach and perch, and Mr. Walters roach. On the 2nd inst., Mr. Lewis showed roach. On Sunday, the 4th, Mr. Reynolds had dace. Last Thursday, Mr. Lewis had roach, one going 13 oz. On Sunday last, not much was done, only Mr. Penny weighing in roach. —Argus.

ORIGINAL ALEXANDRA ANGLERS.

The following members had fish on Sunday last:—Mr. E. Dymond had a fine brace of jack; Messrs. Morton and M. Dymond had jack; Mr. Towndrow, roach and perch; and Mr. Stanton, our country member, had some very fine jack from the Thames.—E. Dymond, sec.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The distribution of prizes for the half-year will take place at the White Hart, Aylesbury-street, Clerkenwell, on Monday next, December 18th, on which occasion host Marshall will take the chair. Being an angler himself, he thoroughly understands how to make his swim comfortable for his members and friends. Chair taken at 9 o'clock.—Obbard, Sec.

RICHMOND PISCATORIAL SOCIETY.

At this society, on Wednesday last, the chief attraction was the result of a competition for prizes, given by Messrs. Cockburn, A. J. Little, &c., for the takes of fish below Brentford Ferry, in order to test, if possible, the reports that fish were to be taken of good quality and quantity below Kew Bridge. Owing, however, to the unsatisfactory state of the weather, only one show was made, the other competitors failing to take any fish. The winner, Mr. E. H. Smith, of Westminster, taking the first prize with 3 lb. 14 oz. of fine roach. In proposing the health of the prize donors, the chairman said he was very glad to see those gentlemen trying the various parts of the river by offering prizes for takes below the old grounds, as it only proved that the fish were to be found much lower down than was generally thought for, and looked upon it as a great kind- and encouragement. In replying to the toast, Mr. Cockburn said he was very glad the idea was appreciated. He was sorry not to see more shows of fish, as the specimen before them to-night quite satisfied him that very fine fish were to be found below Kew Bridge. He should be very glad to offer a prize next season on the same conditions, and congratulated Mr. Smith on his good take and perseverance which he had exhibited that day. Mr. A. J. Little, one of the most practical and experienced anglers on the Thames, regretted very much his prize was not won by a show of fish, even if he had won it himself. He had fished throughout the day, but had failed to take anything. He had also seen Mr. Smith at work, and congratulated him on his success. He should be very glad to re-offer his prize at a future date, and suggested the competition in that part of the river should be earlier in the season, as the fish were now heading up. The chairman next proposed "The Prize Winner, Mr. E. H. Smith," stating he was personally pleased the prize had fallen to him that day; although only a young member of this society he had proved himself on many occasions to be a thorough sportsman and angler, and congratulated him on the success of the day. Mr. Smith, in reply, thanked the chairman for his kind remarks and gentlemen present for the way in which they had received the toast. It might be, he said, interesting for them to know he had taken the nine fish, weighing 3 lb. 14 oz., on the up or flood tide in about an hour and a half (failing all day previous to get a bite or run of any sort.) This he thought a fair proof of the old theory, of fish not feeding on flood tide, was not at all times correct; the fish were all that he had taken, and not one had to be returned undersized. They were taken with bread, and he was attended by Kit Brown, whom he could thoroughly recommend as a hard-working and energetic puntsman whom he recommended the members to try, as distance was no object for him to punt up or down, and did everything in his power to secure the success he had achieved that day. So quickly did the tide run up that he fished from nine to thirteen feet of water, until the punt poles would no longer hold for want of length; of course, this was hard work bottom fishing, as depth had to be altered every swim. He did not, however, regret the labour, as he had tried hard and was pleased at the success. The chairman next said it was one of the great features peculiar to the Richmond Piscatorial Society that they always cordially welcomed visitors among them. He had great pleasure in introducing to them to-night a gentleman of the Gresham Angling Society in the person of Mr. Bates, whose good works in the angling world, and his practical experience as an angler, needed no comment; also Mr. Grafton, whom he was pleased to say was about to add another society to those already enrolled with the angling clubs of London, which he had himself started and called after his own name. He was very pleased to have met him, and wished every success to the Grafton Anglers. Mr. Bates stated he had often heard and seen the good works of the Richmond Piscatorial Society, but never had the good fortune to be present; besides being a member of the Gresham, to which the chairman had kindly referred, he was on the committee of the Anglers' Benevolent Society, and there it was he had been struck with the magnificent donation and prize they had offered for competition on behalf of that society at Hendon; he could scarcely believe it when told the R. P. S. would offer a ten guinea cup, and thought it a joke; he was pleased to say it was too true, and the good work of that cup was following it—if not actually at the time, to a great extent it certainly had since. He hoped at a future date to come among them in a business point of view, which he was sure they would entertain, and thanked the members for the reception they had given him that evening. Mr. Grafton thanked the chairman for his kind remarks, informing him it was the intention of the society he had just formed to have at their heart strictly sportsmanlike anglers, conforming to all regulations laid down by the Thames Angling Preservation, and trusted his little exertions would be successful in forming and carrying out the undertaking satisfactorily. Mr. A. J Little proposed, and Mr. Houghton seconded, a vote of thanks be sent to Mr. Carrington, curator of the Westminster Aquarium, for his kindness in having the fish fed expressly for the members of this society on Friday last, when a great number took the opportunity of being present, and were very much interested. The supper on this occasion of competition, which is usual, was well attended and equally well served by Mr. Munro. The chair was taken by Mr. F. C. Clench, chairman, Mr. Dickinson, V.C.; there were also present Mr. Houghton, Treasurer; Mr. Davis, librarian; Mr. Gaynor, curator; Messrs. Terrill, Taman, R. B. Matthews, A. J. Little, E. H. Smith, W. E. Scantlebury, A. Turner, A. H. Neville, J. Plant, F. A. Crew, and W. Cockburn. Visitors Messrs. Bates, Grafton, &c.—John H. Gaunt, hon. sec.

SURREY PISCATORIALS.

Several members of the society competed for this following prizes: 1st. £2. 2s., given by Messrs. Moore and Morris; 2nd. ton of coals, by Mr. Richardson; 3rd £1. 1s. given by Mr. Hamlyn, at Richmond, and succeeded in getting about 16lbs. of very nice roach and dace. Mr. E. Bansbank won the 1st, Mr. Boalch the second, and Mr. Edwards 3rd. Mr. Beckett also has fish. On returning to the headquarters they were greeted by a good number of members and friends, who congratulated them upon their success. The rest of the evening was spent in songs and recitations that delighted all present. The next competition will take place on Wednesday, January the 10th, 1883, for £2 2s., given by Messrs. Hamlyn, sen., and Mr. Wymer; Mr. Towers will also give a box of cigars, value £1 5s., and a third prize will be given by the society.

Pixie.

THE PISCATORIAL SOCIETY.

The smoking concert in connection with this society in the club room at Ashley's Hotel, Covent Garden, on Monday evening last was a great success. In spite of the great fog outside there was an attendance of about seventy members and friends. Mr. F. H. Lemann, with his usual ability, discharged the duties of chairman, and was most ably assisted by Mr. Norman F. Harrisson in the vice chair. Mr. Render Buck commenced the programme by singing the appropriate song of "Welcome, Ever Friends," which was quickly responded to by Mr. Harrisson, with "I Fear no Foe." The singing was then relieved by a capital recitation by Mr. W. H. Rickatson. Mr. Norman F. Harrisson, who is very popular in the society as a vocalist, and more generally known as "Rogeroo," gave two capital songs, entitled "The Gay Photographer," and "The Man at the Nore." Mr. Green having given an excellent recitation, a solo on the pianoforte was performed in good style by Mr. W. H. Kendall. Mr. Heeney, during the evening, gave a variety of popular melodies. Mr. Kendall sang "The Muleteer's Song." Mr. Fennings evidenced great skill on the violin and on the violoncello. There were other recitations by Mr. Jacques, Mr. McLaughlin and Mr. Kendall, and as regards the singing, it would be invidious to make any selection, as all did their parts so well, and it would have been impossible to have had a better or more successful evening.—B.

TRAFALGAR ANGLING SOCIETY.

A few of the members of this society were out on Sunday last, trying for jack; but, owing to the frost and fog, they could not get a run. The only fish weighed in was a chub, weighing 3 lb. 10 oz., caught by myself in the Wey, at Woking, and it is now in the hands of Mr. Cooper, to be preserved.—J. Gaze, sec.

WALWORTH WALTONIANS.

The member of this society, in spite of the fog, frost, and snow that prevailed on the 10th, visited Egham to compete for Mr. W. Taylor's prizes, viz., first, box of cigars; second, 1 lb. of tobacco, a gross of vesuvians, and a tobacco-pouch. Mr. H. Bayley succeeded in winning the first with roach, and Mr. R. Cain the second, with a nice lot of gudgeon. The next competition will take place on Sunday, January 7th, on which occasion Mr. Boalch will give a guinea pair of boots for the first prize, and for the second Mr. Fox, jun., will give 1 lb. of hard tobacco. Several other prizes will be forthcoming from the society.—Pixie.

This evening Mr. Weatherhead exhibited 22 lb. of jack, the largest fish weighed 6 lb. 2 oz. On the 26th the following prizes are offered for competition:—1st £1 1s., by Mr. Delehaye, sen.; 2nd Mr. Taylor's second prize (Mr. H. Dale having given 2 gallons of gin for the first prize on the last competition); 3rd bottle of brandy, by Mr. Bansback. A deputation from the South London arrived late in the evening to state that the supper between six members of that society and six members of this society that was competed for at Sawbridgeworth would take place on the 16th January, 1883, at the headquarters of the South London, the George and Dragon, Camberwell Road. Members and friends of both societies can attend.—Pixie.

December 14.

CRICKET CLUB DINNER.

The annual dinner of Messrs. Spreckley, White, and Lewis's Cricket Club took place on Monday evening last in the Prince's Salon at the Holborn Restaurant. Mr. Thomas Spreckley presided on the occasion, with Mr. Samuel White and Mr. W. D. Lewis in the vice-chairs. There was an attendance of over seventy, including Mr. T. F. Spreckley, Mr. W. R. Spreckley, Mr. A. Spreckley, Mr. W. White, Mr. S. White, jun., Mr. F. C. Clench, and Mr. H. Brougham. A very excellent dinner was placed on the table, under the courteous superintendence of Mr. T. J. Hamp. There were the customary toasts given and responded to, and some capital singing. The evening was a thoroughly enjoyable one. The firm was represented by all the partners, and the respect in which they are each held by those in their employ was evinced by the reception they met with when their healths were proposed. The club is in a very prosperous condition, and, as was remarked by the secretary (Mr. Milbourn), this was in great measure due to the liberal support it received from the firm.

THE RIVER WYRE—HOW TO FISH IT, AND WHAT KIND OF BAIT AND TACKLE TO USE.

The fish in this water are chub, bream, trout, roach, perch, and gudgeon. The first I shall allude to is chub, or chevin. Anglers going for this class of fish should be careful about bait and tackle. The rod should be not less than 15 feet long, and not too slender for the length; a good reel with either China twist or silk will do, and a few gut bottoms from 4 to 6 feet in length. You must not fish with less than No. 10 hook—let the 10 hook be on the hanger and a No. 8 hook on the bottom. The baits for chub are lampern eel, worm, potatoe, dock grub, maccaroni, pith, and sometimes three or four gentles on the bottom hook, tipped with a chrysalis. The best mode of fishing for chub is swim-fishing. In swim-fishing, you first find a hole or backwater you think likely; then you go from 10 to 20 yards up the river, where you can see a stream or strong current of water (and be sure to fish with a hanging bait); let your line fall in the stream or current of water, spear your rod in the bank, and as the stream draws the line draw the line off the reel, so that the line will follow the stream. To keep your line well in the stream. you must get a large quill (one off a swan is to be preferred), and let it be 4 or 5 inches long. The best time to fish for chub is from August to the latter end of December. When you hook this fish get it to the top of the water as quickly as possible; if you don't, you run the risk of breaking your rod as well as losing your line. Have a landing net with you, as some of the places are very bad for landing your fish. You must fish this river when the water is fine.

The next fish I shall refer to is the bream. This fish is very shy, and when angling for it you should be very quiet. If you can get behind a bush, which there often is on the banks of this river, you must do so, as it will hide your reflection on the water. This fish is chiefly found in backwaters. You must fish on the bottom; by doing so you get larger fish. The principal baits are gentles; sometimes you may take them with paste. Place four gentles on the bottom hook and two on the hanger. A bloodworm takes well occasionally. The bream is generally on feed from June 1 to the latter end of August, but they have been known to be caught almost in every month in the year. You should use Nos. 10 and 12 hooks for bream, also a fine gut line, and rod 11 or 12 feet long.

The next I refer to is the trout. The dock grub is a splendid bait for this fish.

Roach fishing is very nice sport, especially when they are taking potato—you must fish well on the bottom with this bait. There are several other baits—namely, gentles, cockspur, wasp bait, paste, and bloodworm. This fish harbours in backwaters where there is a sandy bottom.

The perch you find in the backwaters generally, the principal bait being a nice lively dew-worm, wasp bait, and live minnows. You must fish with a hanging bait.

Gudgeon are very scarce in this river, but are to be found where there is a sandy bottom. There have been some very fine specimens of this fish caught in this river. T.B.

Bolton, Lancashire.

["T. B.'s" notes remind us that we have often thought of asking our readers if they have tried potatoes, maccaroni, or carrot paste and other similar delicacies, for roach, chub, &c. We know an angler who always works up a little carrot with his bread paste, and he considers it very "big medicine." It seems to stand to reason that roach, and especially Lea roach, must get very suspicious of the eternal little round ball of paste which has been dangled before their noses for centuries. Here is a tip for chub fishers: Try a piece of potted lobster. Send it down by the boughs, after throwing in a few bits for them to taste.—Ed.]

RIVER REPORTS.

MID-THAMES.

The melted snow has had a deterrent effect upon the appetites of the Thames fish, and what with the indifferent water and the few and far-between anglers, nothing very grand has been scored during the past week. The river is now in good order, and the snow broth being eliminated quickly by the rapacious mouth of the Thames, so anglers for jack, perch, and chub may simply look forward to some real jam during the coming and Christmas weeks. From Pangbourne I glean that some capital roach and perch fishing has latterly been had; also at Benson and Shillingford, 19 lb. of perch falling to one rod on one occasion at the latter place of "beer." I have an item from Oxford, but fear to cross pens and purposes with your "Alma Mater" correspondent who (without meaning the least offence to the gentleman) seems to "rave in the lunacy of ink." From Henley, I have the following:—"Some really good perch have been had lately in this locality by Messrs. C. D. Johnson, Paton, C. Cook, and others, several of the fish going over 2 lb. Mr. Gordon, out with W. Parrott, on the 8th, got hold of and held two jack, going respectively 7 lb. and 4 lb." At Medmenham, Tom Street, out with the "Captain," has been doing some perch and roach; and at Hurley, Mr. Gerkie on Sunday got a handsome jack of 9¾ lb., besides perch and roach. Mr. Ornficke obtained some 6 lb. of roach, and Messrs. Berger and Harrison small samples of fish. Below Temple, on Sunday a banker nobbled a Jack of 9 lb. odd, and this day week at Marlow was taken the finest fish of the season, if not even the best as to shape and quality ever landed from the Thames with rod and line. The jack was taken by young Bristow out with R. Shaw, Junr., and scaled 27½ lb.; length, 37½ inches, and girth 22 inches. It seems strange that this fine specimen of *Esox lucinus* for its grand weight should have been so short, but the girth tells a tale, and the shoulders would have made a decent saddle for a jockey. The fish has been sent to Saunders for preservation, will doubtless be shown in the Fisheries Exhibition, and eventually adorn the walls of the Crown Hotel, Marlow, next to *confreres* not quite so Tritonic, caught by the late Mr. West in Marlow and Leeds Castle waters. Mr. Maskell, of the George and Dragon, Marlow, tells me he sent full information of this 27½ lb. beauty to the FISHING GAZETTE last week, and not being in, he felt the slight to his attention poignantly—in fact, I saw him shedding a tear in his bar this afternoon. Thursday Evening, 7 o'clock. River in nice colour and condition, roach should now be nuts on lobs, perch on minnows, chub on pith, jack on live bait, and piscatorial humanity dead nails all round.—MARLOW BUZZ.

Ancholme District.

Nothing is doing this week, owing to the advent of severe frost.—THOMAS FORD.

Chichester.

"Variety is charming," but with frost, snow, rain, and fog following in rapid succession, the variety is not at all charming to piscatorials. Sport has been meagre the past week, but few fish worth notice coming to hand. Mr. Terry took first prize in the weekly competition with but a few ounces of roach. Selham and Midhurst are patronised, especially by the Portsmouth rodsters, who have been rewarded with some fair pike. The scenery alone is worth a visit; comfortable and very reasonable quarters are to be had at Mr. Willison's, the Three Moles, Pelham. Rods, the early part of the week, gave way to skates; but now we return to our old love. This evening is dirty, wet, and miserable.—GEORGE F. SALTER.

Derwent (Chatsworth).

My report is not any more favourable than last week's. A succession of snowstorms in the beginning of this week has made fishing quite out of the question for a time. The river, notwithstanding the amount of snow that has fallen, is in very fair condition, having now recovered a good deal from the heavy floods. To-day (Thursday) the snow is thawing slowly, and is making but little difference to the water; if it continues anglers may soon have good sport once more; but if a rapid thaw should set in, the river will be again bank full and prospects of angling out of the question.—WHEATSHEAF HOTEL.

Dove.

Weather very winterly and quite unfit for fishing of any sort. There has not been a solitary rod out this week. The country is encircled in a mantle of snow a yard deep, and some of the villages are utterly cut off from communication with the outer world. Such a state of things has never before been experienced by even that venerable personage, "the oldest inhabitant." It is out of the question to expect any more fishing this side of Christmas.—THE SPLODGER.

Ilfracombe.

Our herring fishing has been very slack again this week; 250 has been the largest haul any of the boats have had, but there has been a quantity of cod caught, both with ground lines and spillers, weighing from 18 lb. to 24 lb. each; a lot of large skate, some ling, and a few conger have been taken from the spillers. Several pollack, conger, and ling have been caught with rod and hand lines from the jetty. Weather still squally.—E COMER.

Leicester.

Since last Thursday week we have had several heavy falls of snow in and around Leicestershire, accompanied by a severe frost, and with the exception of where there was a stream, the waters were entirely frozen over by Monday. This was the means of putting a stop to angling operations in this locality. The frost, however, began to break up on Wednesday, and a complete thaw set in but it will be some days before the waters are fishable.—ALERT.

Ouse and Ivel (Blunham).

These rivers are in good fishing condition; pike well on the feed, a fine basket being made to-day.—S. ELLIOTT.

Swale.

I was glad to see some remarks from the Editor last week about the "hush" from the lead mines. It is perfectly shameful to see the angling spoiled in this river by the pollutions from Sunnerside, Healaugh, Arkle, and other Becks. The valley is just now severely exercised about a local railway up the dale, and anglers may take comfort that if the matter goes forward, a fine batch of waters, literally full of trout, will be opened to the public above the pollutions in question, and at a moderate cost for journey only.—THOMAS FORD.

Thames (Goring).

Water in good order for all winter fishing; prospects look good for the next few days for jack, perch, and chub fishing. Have nothing to report this week; no boats out.—JOHN RUSH.

Thames (Oxford).

The severe frost of the past few days seems to have frozen the enthusiasm of the Oxford anglers, for I cannot hear of any one who has been out during the week, greater attraction being presented by a skim over the ice in company with some other fellow's sister—not your own, mind; that is no treat at all to standing shivering by the riverside; but if one has the courage to face the biting cold and its concurrent discomforts, numbed fingers, and the nuisance of clearing the line and rings every few minutes of their accumulated particles of ice, some execution ought to be done amongst the jacks, either live baiting or spring. If spring baits are scarce, a large sprat or a small fresh herring make good substitutes. The former fish are rather tender, and soon wear out, but as they seldom cost more than 1½d. or 2d. per pound, the loss of one or two from hard work does not very much matter. Both fish, too, make good trolling baits, but they require a very lightly leaded hook, which should be flattened on one side with a knife or rasp (to cause the bait to spin) to be really effective; at least such is my experience when using them. On Monday it was bitterly cold, so I had a run as far as the turn of the five miles drive, and along the canal path home. I found one enthusiast at work at a bridge hole after the chub. I enquired if he had had any sport. "Not much," he replied. "They don't seem to touch here, but I did get two little 'sewers' at that next bridge." I was rather puzzled at the word "sewer"—it sounded like swearing—so I enquired its meaning, and found it was Hindoostani for pig—rather a disappointment, but I shall use it the next time I have a cussing match. I should like to have been present at the Balloon Society's rooms on Friday evening to have heard Mr. J. P. Wheeldon's lecture. It has never been my good fortune to meet that gentleman; but I hope if ever I am in London when he is going to hold forth, he will favour me with a ticket, and I can promise him that I shall not be amongst the least appreciative of his audience. There seems a complete change in the weather this evening, for as I write the rain is coming down, and the temperature of the air seems much worse.—CHERWELL OTTER.

Thames (Richmond).

The fogs and frost that have reigned during the past week, to say nothing about the snow, have put the fish off feed, and there has been little doing since Saturday last, on which day they fed very freely. The water is a very good colour, and with the present change in the weather the fish should feed. The Richmond Piscatorial Society had their competition yesterday (Wednesday), and the winner turned up in Mr. Smith taking first honours with roach from Kew Bridge, who had Kit Brown as fisherman. Kit knows as much as most people about the netting district, as he has taken more than one illegal net from that quarter.—JOHN BUSHNELL.

Thames (Twickenham).

Wind N.E, the frost and snow having cleared off, the river is now in splendid condition, and we have had some good roach this week from the "deeps." The tides will suit for whole days' fishing, and if this weather continues, I hope to give better report next week.—Alfred Perrin.

Trent.

The river has fallen rapidly, and was on Thursday in very fair condition for chub and pike fishing. The backwaters, were, however, covered with ice, and what fish were taken were caught on the edge of the streams. From Holme, Pierrepont, news is to hand that several very good roach have been bagged with cockspur worms, and a large take of pike is reported from the district of Annesley.—The Man at the Clubs.

Wharfe (Yorkshire).

Angling affairs are at a complete standstill at present, as the cold is too intense to admit of even the most hardy piscatorial enthusiast paying a visit to the waterside. On Monday night the thermometer registered 17 deg. of frost, and even the water in the bedrooms froze. Mr. Eaton has written to me stating that he also has recently caught several grayling, full of spawn. Can any of your readers throw any light upon this remarkable occurrence?—Francis M. Walbran.

Witham (Boston).

The prospects of anglers are very mach better than was expected. Frost and snow had all but put an end to everything piscatorial for some little time. Little, if anything, has been done since last week, and were it not for the slightly better prospects this morning, anglers might have reckoned upon inactivity until Christmas. As it is, the downfalls of the last ten days or so have caused the drains to be bank-full; the stream has been rapid; and the frost has not locked them up in ice. The consequence is, that rearly, a mile or two out ot the town, the drains are not in bad condition, and business might be done in the middle of the day. Whether any have gone out or not I am not quite certain, but a friend tells me he heard of some fish being taken on the Aqueduct water one day this week. If we have no more wet and no frost to lock us up, angling may be resumed by the end of this week, and a fairly good result obtained early next. Winter angling is a feature with us because of the number of pike to be had, and many anglers are anxious to get at them.—The Yellow Belly.

Wye and Derwent.

We have had no angling of any description on these rivers since my last report, owing to the severity of the weather and the great quantity of snow which has lain on the ground the whole of the week. We have had grouse here all over Derbyshire by thousands, flying about from place to place, and not knowing where to go to; in fact, they have been completely lost. It is my opinion that the Scotch moors will know about loosing so many grouse and black game next year, as there has been great quantities shot all over Derbyshire. P.S.—A thaw has just set in, the snow going away nicely.—Geo. Jas Eaton.

Yare (Norwich).

The elements are still opposed to the interests of anglers in this district. I heard of two members of the Champion Angling Club being at Brundall last Saturday, and they were rewarded with a good catch of very fair sized bream; the river has been in a state of flood most part of the past week, and it will require quite a week's settled weather to make it in good condition for angling. Quantities of hail and rain have fallen, and this morning (Thursday) the country was covered with snow, but it had all disappeared by mid-day, and the air is much warmer. Prospects not at all encouraging.—Robert Moll.

During the past week the weather has been fine and frosty, but the river has been in a state of flood, the paths in several places being more than half covered by water, marshes flooded, and skates more thought about than rods and lines. Notwithstanding, I have heard of several very good catches of roach, one angler catching nearly 4 stone of good fish, many large ones; another brother of the angle, in two hours caught forty, one of which he informs me weighed 2¼ lb.; but as I have never yet seen a roach caught here, weighing over 2 lb., I doubt if it was not a hybrid, they are not uncommon. As the water settles down I anticipate some good sport, both bottom and jack fishing, but the former is very cold work just now, and only very ardent lovers of angling are found at it. I hope to be able to send a good account for next week, as the prospects are brighter.—Robert Moll.

Yore (Hawes).

On Monday last, Messrs. Jas. Hesseltine and M. Williams were both out, and each gentleman succeeded in bagging two brace each, weighing respectively 2 lb. 4 oz. and 2 lb. 10 oz. Since Tuesday, we have had a continuous downfall of snow, and to-day the roads are completely blocked; gangs of men are, however, clearing much of the obstruction away. A thaw seems imminent, and should it take place quickly, we may expect a very great flood. Fishing will be altogether out of question for the next few days at least.—J. Corry.

[Received too late for last week's issue.—Ed.]

My last report would no doubt be too late for insertion in the issue it was intended for. This was owing to the complete block we sustained to all communication. In some places the snow was eight yards thick. A thaw is looked forward to with great apprehension, as without doubt if a rapid one, a very large amount of damage will be done. Fishing has been altogether out of the question the last week. My experience with respect to the size of grayling in the Yore is precisely the same as that of Mr. Walbran. It will, perhaps, be of interest to some of your readers to know that grayling may be taken in the Yore as high up as Yore Force, just behind the Moor Cock at Hawes Junction. I have taken fine fish there. I saw a remark anent grayling taking the minnow in your pages a few weeks ago. Your correspondent stated that grayling would not take that bait. I know they will, as a neighbour of mine took two one one day whilst spinning for trout, and he said they came as "fierce as bull dogs." A working man hooked and played a "monster" for a good while only last year. Observers judged it to be about 4 lb. Grayling of this weight have been taken up here, and I have no doubt some good ones still haunt the fine deep holes about Hawes. Grayling will also take either trout or salmon spawn. I got a trio about a month ago, literally gorged with pellets of trout spawn. We are singularly free from that pest the eel in our water. One or two, and they will generally run from 2 lb. to 4 lb., may be heard of being taken during a season. Lemmer water, about 4 miles from Hawes, would be a very "Paradise" to roach, carp, and bream fishers, as the lake fairly swarms with them, as well as trout. I once took 45 trout in 3 hours. At the foot of this lake I drew two at a time for eight times. They are exceedingly numerous, and when on the feed afford fine sport. The coarse fish are never disturbed, as our natives do not understand how to angle in the Nottingham style, &c. Skepsful are sometimes taken by being pulled out with a hay rake during the spawning season, and occasionally a monstrous haul is made with a net.—J. Corry.

NETTING THE RESERVOIRS FOR STOCKING THE THAMES.

Subscription List for Expenses Incurred.

It is with much pleasure we have to acknowledge subscriptions to the above as follows:—

	£	s.	d.
Mr. P. Geen	2	2	0
Mr. R. F. Lines, Kensington	1	1	0
Mr. A. G. Jardine	1	1	0
Mr. R. B. Marston	2	2	0
Mr. T. R. Sachs	1	1	0
Silver Trout Angling Club	1	1	0
Larkhall Angling Society	2	2	0
Hammersmith United Angling Society	2	2	0
Good Intent Angling Society	1	1	0

A number of societies have sent Mr. Geen promises to send subscriptions as soon as they can call a special meeting.

ANSWERS TO CORRESPONDENTS.

P. Oxford.—We do not know anyone who would give 20s. for the skin of an Argus pheasant.

Secretary Angling Club.—The anonymous strictures on the management of the Anglers' Benevolent Society which have appeared in a contemporary are not justified by the facts. We may refer to this matter again. The writer's argument is that because it costs almost as much to distribute the benevolence as the latter amounts to in cash, something must be very wrong. There *is* something very wrong; and that is, that the officers of the club, who could *at the same expense* have distributed £400, have only received about £40 to distribute.—Ed.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

NETTING THE RESERVOIRS.

Sir,—I should like to endorse my friend Mr. Geen's remarks in his letter, which appears in your last issue, in reference to Mr. Thomas Spreckley.

I read Mr. Spreckley's appeal, which appeared in your paper of the 18th inst., and did expect that it would be followed by a circular to every angling club in London as being a surer means of gaining the desired end.

I am sure, now our President has taken the matter in hand, the appeal for funds will not be made in vain.

Mr. Thomas Spreckley, as most anglers know, is a gentleman who is always working for their interest, sparing neither time nor money whenever any work is to be done whereby they may gain something in the way of sport. The T A.P.S. has spent a lot of money in netting the reservoirs, and Mr. Spreckley makes his appeal for that Society; and I have very great pleasure in backing it up, and will do all in my power to make it a success.

I have also heard the slur cast upon the anglers of London, but it has been by men who could not make anglers swallow the silly fads they had projected, thinking thereby to add to the projector's prestige.

We, who are always amongst them, know better, and can tell the 'know-als" that the anglers of London, when appealed to properly and by persons in whom they know they have friends, are always ready and willing to support any movement for the general good.

My unfortunate illness prevents my being amongst my boys at present, but the numerous letters of condolence I am constantly receiving show me that they do not forget me, and are, as ever, anxious to do whatever they can to afford me pleasure. I beg to take this opportunity to return them my sincere thanks, and tell them that, next to my speedy recovery, my greatest pleasure will be to see their subscriptions pay the whole of the cost of these nettings, and I feel confident of that pleasure.

I would like, while upon this subject, to give the T A P.S. a hint.

When netting in future, ask as many anglers as are required for the work to assist, and I will undertake that a sufficient number will be only too pleased to give their services free, thus saving some expense Ask them to come and work, but don't let them find when they arrive that there are already too many labourers employed.

Is it not possible for the Society to have their own nets and their own keepers to work them? That would be another great expense saved in the long run.

No one knows better than myself how hard Messrs Spreckley, Brougham, and a few others of the Committee work from year's end to year's end, and I am sure the receptions they receive at anglers' meetings are proof that their labours are appreciated. Since Mr. Spreckley has been President of the T.A.P.S. he has done wonders for us, and I only echo the sentiment of every angler in London when I say, "May the day be very far distant that sees another in his place." He is to the T.A.P.S. what Mr. Geen is to the Association—indispensable.

Wishing you, Sir, and all your readers a merry Christmas.—I am, &c.,

T. Hoole.

[The "boys" will be very sorry to hear that Mr. Hoole is very little better, and is still compelled to keep to his bed. They will join us in wishing him as pleasant a Christmas as possible, and a speedy recovery. We hope the appeal which he makes in the above letter will not be in vain. His suggestion to the "T.A.P.S." is a most happy one.—Ed.]

THE BAYONET-POINTED—BETTER CALLED SURGICAL NEEDLE HOOK.

Sir,—Your correspondent "J. McD." thinks he can be wise after the event, but somehow that appears to be to him impossible. He makes an attempt to quote from an authority in order to detract from the merits of another. It is quite apparent that if he meant to praise and give credit to the authority—Mr. Greville Fennell—he would have taken care that the quotation was exact, instead of trusting to the thinness of his memory. It is all very well to regret that he has lost his book; but when he makes statements —the veracity of which is doubtful—in which there is no ground of truth, he brings himself, his writings, and your journal into discredit. If, as he says, "any possessor of a copy of the 'Book of the Roach' will be able to corroborate my statement that the worthy author's words are to the following effect: 'When the angler finds his hook has become blunt, he should use a small file or piece of stone to sharpen it, giving the hook a triangular shape from point to barb, so that it will cut in like a glover's needle,'" were this statement correct, I should be the first to give Mr. Fennell the credit of the idea, and accept the "faint praise" of "J. McD.," with which he means to "damn me." All that Mr. Fennell directs is that the angler is to carry a file to renovate hook points which have become blunted. There is no word of bayonet or triangular point in his book. But I had better quote the passage. The exact words are:—

"A small, fine, flat, watchmaker's file should be keep in the angler's book to renovate hooks when necessary. The points should be filed square, and not rounded, as the edges when left sharp cut in like a glover's needle into leather." ("Book of the Roach," p. 35. 1870. Longmans.)

Now the carrying of a file to sharpen hooks is a very common practice. I have done so for thirty-four years, and I know many who do so who never saw a roach nor heard of Mr Fennell's book. There is certainly in angling an advantage in renovating blunt hooks squarely or with many sides; but what I claim is that the three-sided point, like the surgical needle, is infinitely superior to any other form for penetration. In my former letter I used the expression "glover's needle." I find I made a mistake—withdraw the expression, and say surgeon's needle only. The hooks I have had made are devised to penetrate with greatest ease, not merely leather, but living skin, gristle, flesh, and fish-bones. I am sure if Mr. Fennell had thought the square points of so much advantage he would have brought out a hook so designed, or somebody else would, and not left me "unconsciously to walk a few steps further on the path previously trodden," as "J. McD." would have me, and which I certainly decline to do, much preferring my own path, even though it is triangular and not square.

When I introduced the surgical needle hook, and gave demonstrations to the Gresham and Piscatorial Societies, I then laid no claim to novelty in idea. In fact, I thought the matter so simple that I expected some member to rise up and say he had seen such hooks before. One gentleman did so at the Gresham, but, on producing his hooks, he found they were flattened, not triangular. "J. McD." gives me credit for having put the idea into practice, and having the hooks specially manufactured. I have no desire to take credit for anything that is not my own. I have freely made a present of the idea and practice to the angling fraternity, having no interest in the matter further than the pleasure afforded me by the thought that, by the introduction of this hook, I thereby increased the angler's delight by adding to the facility for catching those fish which the older members of the angling world know are year by year becoming more shy, timid, and difficult to take.

Perhaps it will be a pleasure to "J. McD." to know that I had never seen a copy of Mr. G. Fennell's "Book of the Roach" till to-day, when I took out my extract. I do not profess to be a roach fisherman. When I designed my hook it was purely from experiences as a fly-fisher. Its practical utility in that form of sport has caused me to extend it to all kinds of angling.

When "J. McD." takes upon himself to quote again, I would advise him to learn his "lesson by heart," or have the authority before him. Loose writing of this kind, bad as it is, is all the worse when the writer has not sufficient courage to append his name. To whom shall I compare him?—I am, &c.,

John Brunton, M.D.

21, Euston Road, Dec. 9, 1882.

[To save time we sent Dr. Brunton's letter to Mr. Greville Fennell, and publish his reply below. This is yet another question as to "who is the father?" All we can do is to let the anxious parents fight it out themselves; it does not pay to meddle in "domestic affairs" of this kind. It looks a little as though the Doctor's well-known skill had brought to life the apparently still-born "adaptation" of an eminent angler. In any case the angling public will get the benefit of the hook, which is a great improvement on the old shape as regards point.—Ed.]

Sir,—I thank you for the permission to peruse Dr. Brunton's letter before it appeared in print.

I have no wish to engage in a literary duel—either triangular or square—with the worthy medico, but perhaps he will grant me pardon when I say that it is a curious coincidence that he should in his first announcement of his presumed improvement have used the comparison with a "glover's needle," as the model to follow, which I did, and which I had, as I shall further show, in my mind when I wrote the passage quoted. I freely admit that in using the term "square" it was not closely applicable, as this shape presents four sharp angles instead of three. I have known so many instances of the same notions occurring to more than one mind that I freely and unconditionally exempt the Doctor from the slightest desire to plagiarise, and would suggest, with every sentiment of an angler's better nature, that it is just possible that the Doctor, although he was in darkness until now regarding the existence of my "Book of the Roach," may have heard the suggestion—I cannot call it an invention—spoken about by others, and thus mentally imbued, very naturally conceived his notion to be original.

That the principle of the triangular glove needle in its integrity was the object I had in view is shown by my instructions to a manufacturer, as well as to my ingenious fisherman, the late Henry Crystall, the designer of the crystal hooks, to follow explicitly the exact form of the glovers' and saddlers' needles sent with such orders.

If the "Book of the Roach," now out of print, should justify a second issue, I will cause the word "triangular" to be substituted for "square," and give the Doctor credit and thanks for pointing out an inadvertence which has now passed unchallenged for upwards of twelve years. Wishing you, Dr. Brunton, and "J. McD." a merry Christmas and a happy and prosperous new year—I am, &c.,

Greville Fennell.

8, Percy Road, Starch Green, Dec. 13. 1882.

BITES LOST WHEN ROACH-FISHING.

Sir,—Many, many thanks to "L. B." After reading his remarks, pointing out as they do the failure of some of the best A1 Lea men (the confession of failure coming, as it does, direct from themselves), I think we may safely say, "We still live."

"Anti-Theory" seems to have arrived at such a state of disgust, he simply says, without making any "bones" about it, that I "cannot know anything at all about it;" and as this remark applies to "E. W. A.," who is precisely of the same opinion, his words being, "The only conclusion it seems possible to arrive at is that he is not really a roacher," nothing more need be said. This is a settler.

Under these sad and mournful circumstances, Mr. Editor, what am I to say to Charlie South? One thing I will say, Charlie South, "I tender you my most sincere thanks for your kindly mention of my name." But what shall I say when I hear you make that astonishing confession where you say, "I myself have handled both Thames and Nottingham rods; but with neither rod should I like to say that I could at all times make sure of even one knock out of six"? What, not make sure of one! Is it possible! Well, do not be down-hearted; up to the present there are two or three more in the same swim, for here is "The Trent Otter," who has had a dozen bites in succession, "bites of all sorts and descriptions," and yet could not hook a single fish. And you know I have quite recently confessed my inability even to hook one in goodness knows how many bites. However, "as I am not a roacher, and know nothing at all about it," you scarcely need take into account my case. After this I am constrained to make the remark, for which I know both yourself and "The Trent Otter" will forgive me—

"When shall we three meet again?"

I respectfully advise my old opponent, "J. McD.," who is also of the same opinion, to carefully read the remarks of the Editor, "L. B.," "W. H. B.," and more especially "Charlie South," and last, but not least, "The Trent Otter." There is a lot of good, sound common sense in the letter by "W. H. B.," as well as a singular coincidence,to wit:

"W. H. B."—"The rod I fish with is 10 feet in length, light, and stiff, and for waters where I can fish 4, 5 or 6 feet deep (good—very) within 2 yards from the side (still better), a longer one is not required." Quite true, my friend.

"Mark Antony," No. 2—"The rod is not more than 10 feet long, must not be too whippy nor too light, but nice and springy."

Wonders will never cease. In fact, this style of mine is precisely on the same principle as the Lea style, minus the disjointing, until you hook a large chub, barbel, or carp, and then all similarity ceases.

I also think a number of these so-called knocks are occasioned as C. South says: "It is simply the roach butting the bait without the ghost of a chance of their taking it into their mouths"; and then he goes on, "How in the name of wonder any angler at such times can make sure of banking their fish is beyond me." Is it? He says, "I have that branch of the art of angling still to learn." Have you? Well, then, allow me, dear friend, to introduce you to Messrs. J. F. Waters, "E.W.A.," "J. McD.," and "Anti-Theory," and they will teach you, and that without the slightest fear of a break down—at least, only one in 24 tries.

Here is the take of an ordinary roacher, "The Trent Otter," this year:—31 fish, 17 lb.; 61 fish, 29 lb.; 20 roach, 15 lb. (8 over a pound); 15 fish, 11 lb.; 11 fish, 6 lb.; and 42 roach, 31 lb., 20 scaling 21 lb.

How would "Anti-Theory" like a dub or two like that out of the Lea?—I am, &c.,

Mark Antony.

P.S.—Lastly, I beg to say, because I know, a great many of these bites are lost (especially amongst the larger and elder roach) neither by striking too soon or too late, too quickly or too slowly, using too many shots or too few, using a long or short rod, gentles or paste, big or little float, reel or no reel, &c. I will tell you how they are lost—the fish bite at the wrong end. The cunning old buffers studiously knock off the paste with their tails.

[Come, "Mark Antony," we are all "honest men," you know, and we hope you will accept the invitation held out by "Anti-Theory," only for goodness' sake have someone to see that neither of you take dried fish with you to pretend you "caught" 'em. It might be as well also to bar the "other end" which you refer to. But there is much truth in your jest, for we have seen the bait-paste knocked off the hook as a shoal of roach brushed past. We cannot say it was done with a view to eating the morsel after it was clear away from the steel, for the fish would not touch it; they seemed to be playing "follow my leader" backwarks and forwards along five or six yards of a reservoir. They often touched the line and appeared not to notice it or the bait, but many of them have died in a proper roach-like manner since. What a curious thing it is that any controversy about angling matters inevitably leads to a row of some kind. We have had to use the "knife" pretty freely already before inserting correspondence on this roach-biting question. A man is not necessarily a liar or a fool because he does not agree with you on some angling question. We wish our correspondents would remember this. By the way, "Mark Antony" "thanks us for our foot-note," as though we had taken his side as against his opponents. We beg to assure him that we have only given our own experience in this interesting matter, without prejudice. The roach does not often get so much written about him as he has had lately, and he certainly comes out of the battle, with no loss of reputation as a wise and knowing customer—in public waters, at any rate.—Ed.]

ROACH BITES.

Sir,—I should like to put the original argument before your readers once more, as some of your correspondents seem to me to be arguing, as it were, in the dark. It is really not as to the number of knocks lost in general fishing, but as to the number of bites lost whilst "roaching" with paste. Also, that no roacher would think of using anything but the roach pole and tight line, and I think it is admitted on all hands that this is *the* style of roaching.

"Mark Antony," in his first letter on this question, which appeared in the Fishing Gazette dated Nov. 18 last, says:—

"The mere operation of the roach taking in the paste instantly sinks the float. . . . . In fact, &c., the ordinary roach angler will lose four out of six bites."

Now "Trent Otter," "Mark Antony," and Co. begin here:—Roach taking in the paste sinks the float.

The "Trent Otter" commences his letter with a quotation from one of mine, evidently not having noticed that the major portion of it was quoted from "M. A." He then goes on to say that in this case four out of six lost would be a heavy percentage; thus "M. A.'s" theory is condemned by his own friend. Further on, after referring to 12-foot holes and rods, and 20-yards strikes—neither of which do roachers interfere with—he arrives at the gist of the whole question, viz., why roachers do not lose such a large number of bites as "M. A." mentions, "that as the Lea man's rod point is continually over his fish, he is not likely to miss many bites." Just so. And I thank "Trent Otter" for putting it so "pat." As to size, no club man would be allowed to show such a sample of roach as that he mentioned.

Mr. South's explanation of "knocks" is rather extraordinary. I have foul-hooked fish on having what I have taken to be bites, and also brought up fish scales on the point of the hook. I remember one day in particular, fishing the upper Thames, besides getting a few roach from real bites, I foul-hooked two fish, and brought up at intervals during the day three scales on the point of the hook. My explanation of it is this: there were a number of fish in the swim, and on the bait travelling down it knocked against some of them, and I, mistaking it for a bite, and without waiting for a second, struck, and so hooked the fish or scale. The idea of fish "butting" the bait, with all due deference to Mr. South, I cannot credit.

"Mark Antony's" "Name them!" marking observations, &c., seem to me to infer that "E. W. A." is telling a falsehood. Would it not be as fair to enquire of "M. A." when and where he obtained his 25, 30, 35, and 40 lb. of fish so easily? As to his "singular killing, hitting fish so beautifully" style, I am afraid it is nothing more than having the line to reach to the butt of the rod, where it is tied for a tight, and "see-sawed" through the rings for a running line. If this is not it, "M. A." would confer a great boon on us poor anglers by enlightening us as to this wonderfully killing style.

"M. A.'s" letter on the "Ravensbourne" is a very peculiar one. How is it that during twenty-five years—what an age he must be!—he had not before August last fished the Keston portion of it?

Let me advise "M. A." to read and well digest the letters from "E. W. A." and "J. McD." in your last issue.

Would "M. A." give me the pleasure of his company for a day or two's roaching next spring? No excuses, "M. A." Yes, or no?—I am, &c.,

ANTI-THEORY.

P.S.—In last week's letter read "striking" for "sticking," and "querulousness" for "generousness."

ROACH BITES.

Sir,—I wonder what "Trent Otter" means in his letter by challenging me to fish for roach with my float 29 feet away from me. I have never stated that under these circumstances I, or anyone else, would rarely miss a fish. Certainly Lea cracks, and your humble servant as well, go to work in a vastly different manner to that. I cannot think that either "Trent Otter" or "Mark Antony" have ever fished in the Lea; if they have, they show a most lamentable ignorance. The description of "The Newark Angler" of a Lea fisherman is about correct, and I will guarantee that if the Newark man worked in a much different style than he describes, he did not get many fish. As he was at work near the spot, it would be interesting to know what his take was. As regards the small size of fish, it must be remembered that some of the very best roach fishers are working men, who can afford little time, and still less money. They consequently have to fish pretty close home, and for the pure love of the sport. The water is usually very bright, and the fish always exceedingly shy, being over-fed and over-fished; and besides, they run small as a rule; the larger fish are the exception. "Trent Otter" should have a day at one of these places himself, and I am much mistaken if he would not "turn it up" disgusted at having a few knocks, and he will find also that little roach do not always bite as "though they meant it."

As regards the rod "any amount of length," unless you use a 20 to a 24 ft. rod, you might as well not fish at all. Don't believe what I say, but go and try.

"Mark Antony's" letter seems a mixture of sarcasm, egotism, and unbelief. He asks a question, and because it is answered, exclaims, "Dear me, is it possible?" Yes, sir, it is not only possible, but it is done. Why he should as good as infer I am telling a deliberate untruth I cannot imagine. I simply state what I have seen and what I have done, and hope to do again many times yet. Others testify to the same thing, and surely he cannot imagine we are all exaggerating for the love of the thing. He then asks, "Am I alive?" I should say no doubt about that. Then, "Am I in my senses?" Well, that is quite another matter, and an opinion could not be given without an examination. I do not consider myself a "crack," because many others are far better roachers; but if "M. A." thinks that with the tackle he describes he can Lea fish, I am willing to go to battle with him, and the loser to give £10 to any charity the Editor names.

I can certainly inform "M. A." when and where these watchings took place, and take him to the spots. I see no ordeal in watching a crack at all, and if "M. A." were really a sportsman he would rather enjoy it. Why go and see a pigeon shot, or a game of billiards played by adepts at the science? I should say, both for instruction and pleasure. "M. A." would evidently fail to comprehend the one or enjoy the other. Let him go to the Lea and fish in the style he lays down, and I think he will look like "Grief sitting sorrowfully on a three-legged stool," instead of smiling on a monument. J. F. Walters is quite correct in saying roach-fishing in the Lea is not what it used to be, and that it is difficult to get the fish to feed; but what has that to do with striking them when they do feed? It simply proves, as I have stated, that almost every fish must be hit to get the baskets that are taken.

"M. A." must kindly remember he is now introducing another method of fishing altogether, and about which I have not said a word. I stick to my text, and that "M. A." may know it is bona-fide I give my full name and address, and shall be pleased at any time to see him at my house, or give him any "wrinkles" I may know that he does not.

As regards not hitting fish—can "M. A." or "H. H." tell me how it is that on some days you cannot hit a bird?—the gun is the same, the birds are the same, yet your bird gets away. Another day, you cannot make an ordinary hazard at billiards, you cannot keep the balls together, and run up a big break?—the balls are the same, the cue same. If they cannot, I can explain it to them. The fault is behind the gun and behind the cue; and, depend upon it, the fault is behind the roach rod, if so many fish are missed as seems usual with "M. A." and others.

Charlie South's letter is straightforward and plain enough. He states, "I have never fished the Lea." Until he has done so, I am afraid he will not understand this controversy. I can assure him that there is a very great difference in fishing the two waters. This he will find out when he tries the Lea for the first time.

One all-important point, which seems quite undecided, is as to whether the bites we imagine are roach are really so. I have over and over again in the clear Lea water watched fish as you throw in a pellet of paste. If the roach are on feed, they take it; if not, they look at it and turn away (I have never seen them run against it); but almost invariably you will see some of the small fry—minnows, bleak, and gudgeon—hit and hit it again, in fact, almost playing battledore and shuttlecock with it. Now, if you had been roach-fishing, and had not seen this, these might and probably would have been put down to lost bites.

Unfortunately, near London, we have not such happy hunting grounds as described by "H. H.," where the fish are so thick that they jostle the bait about and get foul-hooked. He might fish for twenty years in the Lea, and I do not think he will ever foul-hook a roach. (I mean, of course, whilst roach-fishing.)—I am, &c.,

EDWIN W. ALABONE, M.D.

Lynton House, Highbury Quadrant, N.

P.S.—"M. A." must not imagine Lea roachers always have small baskets. Three years ago, I fished all day, and do not think I missed more than three fish; and in consecutive swims I brought to bank three roach, weighing respectively 2¼ lb., 1½ lb.; and 1 lb. 1 oz. The fish taken through the day weighed 45 lb. This is the exception the other way. If "M. A." doubts this (he seems to be given to doubting), he can have full proof. On a subject like this, which simply resolves itself into a matter of truthfulness, I cannot see why name and address should be withheld.

ROACH BITES.

Sir,—I have read with some interest the arguments concerning roach-fishing published in your columns, and have been somewhat startled, and not a little mystified, with the ideas of some of your correspondents. Surely "E.W.A." must be joking. It is absurd for any roacher to maintain that he can at all times hit ten fish out of twelve; but, my dear sir, I cannot discover in any of the letters written—I presume some of them are intended for our instruction—any reference to the difference between summer and winter roaching.

Possibly "E.W.A." or "Anti-Theory" have not tried roaching at this time of year. The summer bite of a roach is, in my humble opinion, like unto a fair lady indolently reclining on an elegant garden chair underneath a shady tree, sucking—well, say, sweet pastry. The winter bite is much after the style of a bold sportsman, whether with gun or rod it matters not, returning after a successful day to his well-earned dinner, tired, hungry, and ready to demolish roast beef, gently done, or anything else that comes to hand.

I do not, for one moment, maintain that roach always bite well in winter, but I firmly believe that a fair roacher in the Thames (I know nothing about the Lea), with a 12-foot light cane rod and fine tackle, can hit a far larger percentage of fish in winter than in summer. The cold weather perhaps sharpens their teeth, but the loss of a great portion of their natural vegetable and insect food has more to do with this, I think.

Will "L B." kindly say in his weekly notes what he thinks of straw or caddis bait for summer roaching? In my opinion, it is preferable to any other. I find they will take this bait well when neither paste or gentles will do. Perch and trout are very partial to it; I have frequently taken both when using this bait for roach.—I am, &c.,

RENRUT.

BARBEL BITES.

Sir,—I have been very much interested in your correspondence on "Roach Bites," and I am sure it would interest many of your readers if you left the columns of your excellent paper open to the bites of other fish. Take, for instance, the knock of the barbel whilst ledgering. I mean the knock that nearly dislocates your arm, which comes on you suddenly, without the usual fine little tap, and when you strike you find not the slightest resistance, and your worm torn to pieces or cleaned off the hook in a marvellous fashion.

I have tried every method whilst the fish are biting in this manner, striking the very instant, waiting for the second knock, which never comes, and fishing with a small hook and the tail of the worm only—but I have never been able to hook them when they are larking.

It seems wonderful to me how this fish, with a knock like a galvanic shock and the line cutting your finger on which it rests, can clear your hook like a flash of greased lighting without being hooked in some way or other. Whilst fishing a barbel swim at Pangbourne last August, I had any number of these bites—in fact, as fast as I could bait my hook to throw it in. The only fish I caught that morning were, curious to say, five trout, but all under 2 lb., so, of course, I returned them. This, however, looks well for the increase of trout in the Thames.

Will you kindly tell a novice, and would-be slayer of barbel, what he should do when they are biting in this manner?—I am, &c.,

LAY BROTHER.

Finchley Road.

[Our experience in barbel-fishing is much too limited to warrant our expressing any opinion on the question our correspondent refers to. But we are sure "A Thames Fisherman" can and will give us a few notes from his great experience in this fishing, and doubtless other barbellers will join in—in a friendly way, let us hope.—Ed.]

THE BATTLE OF THE STYLES.

Sir,—I shall bet nothing, and do not believe in gambling; but I believe that a Trent man can fish a thousand yards much more effectively than a Thames man can 500 in the same time. I am sure I have seen the fork-stick throw the live pike bait further than ever I saw one thrown from the Nottingham reel, and I think that the Thames man can throw further, and when you have said that in favour of the last two named styles, you may then make a stop, for, as you, Mr. Editor, say, "we can stand on a hedge and fish." My first recollections of pike fishermen (and I can remember well 50 years ago) was that they all fished or cast with loose line, and had no reel. They used to lap their line on a square piece of wood and other such contrivances, and I can assure you that I have seen many hundredweight of pike caught in the loose line days; but my opinion is that the loose line style would not catch one pike to the reel style's five. I should be very pleased if some of the fish writers would fulfil their word and call to see me.—I am, &c.,

RIVER KEEPER.

Caythorpe, Lowdham, Notts.

THE BATTLE OF THE STYLES.

Sir,—Nottingham or Thames—which has it?—decide the point something after the fashion of the Irishman's cow, "Mine's as good as thine, aye, and ever so much better!" To those who prefer one more than the other, I say, learn both styles; you can then change about at pleasure. My angling tutor, from whom I received my first lesson some three-and-twenty years ago, could do anything in reason with a bait. His style, however, was neither the Thames nor the Nottingham, but a sort of combination of the two. He used no reel, neither did he coil the line at his feet, but after adjusting his bait and line to the rod, he tied the other end of it to a button-hole of his coat, then with the thumb and fingers of his left hand he coiled up the loose in layers of figures of eight—a simple process—the thumb guiding and forming the top loop, and the fingers the bottom one. Now, for nicety in casting I never saw his equal: were it the edge of a bed of weeds he wished to try, the off side of a submerged stump or bank, under a clump of osiers—a spot almost inaccessible—placing one foot slightly forward, and keeping his eye fixed on the mark, never turning his back to the river, a gentle swing of the rod, and out went his bait, skimming along, swallow-like, above the surface of the water, alighting noiselessly within a foot or so of the spot aimed at, and, be it observed, the commotion made was little more than that of a fish rising at fly.

He was sure of sport if they were on at all—rarely did he come home fishless. Contrast this method with the rocket-like motion of a big cast, either Nottingham or Thames style. What a splash after going swish through the air some fifty yards or more—Humph! you might as well have pitched in a big coggle! I fancy I see Mr. Luce spread his fins, turn up the white of his eye, as much as to say, "See any green there?" and like a flash shoot under cover, leaving the long caster to pelt away to his heart's content. I would give preference to the unassuming rodster who can comfortably cover half the distance, no matter what his style, so long as he performs neatly; the less commotion he makes the better I like him, and I venture to remark he is not the most unlikely man to weigh in big takes. Let us apply the same reasoning to casting spinning baits as we would to fly-casting: put your lure g-e-n-t-l-y over your fish, and you have him to a certainty if his appetite is in fettle; don't over-reach yourself by trying to show off a bit—your game should be more real. The satisfaction derived from making an extraordinary cast will in all likelihood be more than counterbalanced by the chagrin experienced at the tangled mess your line will get into, not to mention an empty creel.—I am, &c.,

The Boston Bittern.

THE BATTLE OF THE STYLES.

Sir,—As your correspondent "V." has referred to my casting in the tournament, I shall feel obliged if you will allow me space to make a few remarks agreeing with some of his observations. While not wishing to express any contempt for "the absurdly short rod," which served me in such good case, I would like to mention that it forms no portion of my angling effects; I had never previously seen the rod, which was kindly lent me on the ground, as also were the winch and line. I did not intend competing in the Thames style, as I had only my light Nottingham tackle with me, and this I did not intend straining by putting on the power required for a long Thames cast; I felt sure a short rod could throw almost as far as a long one, and the result verified my idea. I quite agree with "V." on the handicapping of the rods; now I also agree with him that my later throw with the long rod was "perhaps because I then threw in the Nottingham style." That is undoubtedly so, and the reason why it was so is a very good one, and not at all in favour of the superiority of the Thames style. Being at that time but a novice in the Nottingham style o casting. I was doubtful of entering the competition at all against such men as Mr. Little and Mr. Gregory. I feel sure "V." will not differ with me when I suggest that "it is no sign of one art being inferior to another because a novice of the one happens to be placed in juxtaposition with an adept of the other." I think I could make a better cast now, and will perhaps try at the next tournament, when it is much to be hoped all those gentlemen who have been so valiantly defending their favourite styles will also be present as competitors, thus adding to the keenness of the competition, and, what is more important, to the funds of the Anglers' Benevolent Society. If "V." could refer to the notes of the casts made at the last tournament, he would, I think, see that (what with tangles and such like troubles) the Thames amateurs made considerably less numbers of casts in the time than the Nottinghams.—I am, &c.,

R. W. Hobden.

HOW TO LEARN TO THROW WITH THE NOTTINGHAM REEL.

Sir,—Would you allow me, through the F. G., to give a hint to anyone desirous of learning to throw from the reel? First, get a good rod with big fast upright rings, and not many of them, on your rod, a good centre reel, well-varnished inside and out, and also a good soft silk plaited line, and then get a five ounce—say potato—and tie it to your line; take up your rod with the left hand, above the reel, then clasp your rod with the right hand, just below the reel, leaving the forefinger to act as a brake to the reel; then, when you are ready for a throw, do not attempt to throw far, as you would easily break your rod with such a big weight. The reason I recommend a big weight to learn with is that you can then feel the reel better than with a lighter one. I think I could teach any new fisherman to throw from the reel in a few hours; in fact, I have taught many, and if this helps anyone I shall be pleased.

Trent Veteran.

P.S.—Do not attempt to throw further than you feel you are master of, as you look soft to get tied up, as the Londoner calls it. I have seen men make long throws and then a tie up or two.

A SEA-FISHING QUERY.

Sir,—Can any of your readers tell me if I can fish from the sands at Ramsgate or Margate with rod and line, and how?—I am, &c.,

Angler.

[If "Angler" will refer to the *Angler's Diary*, under "Ramsgate and Margate" he will find some useful information. Next to boat fishing, the pier and jetty fishing is best. We do not think much can be done by fishing from the sands, as the fish do not often run in close enough. Bass, whiting, mullet, cod, dabs, eels, &c., are caught at the above places. We should recommend a stout jack rod, 100 yards of strong jack line, and gut tackle—stout, of course.—Ed.]

FERNS ON HAYES COMMON.

Sir,—I beg most respectfully to inform "Anti-Theory," in spite of his statement to the contrary, there is at least one fern on Hayes Common, and as it may interest and mayhap amuse that gentleman, here it is: *Pteris aquilina*—bracken—a common species of fern, the name itself (*Pteris*) being derived from the Greek word πτερον, signifying a plume or feather. And it is exceedingly probable if he were to open his eyes he might discover *Blechnum spicant. Filix* or *Filix mas, Polypodium vulgare, Scolopendrium vulgare*, and on an old wall in the immediate neighbourhood *Asplenium—ruta—muraria*.—I am, &c.,

Mark Antony.

FISHING THROUGH THE ICE.

Sir,—In answer to "Spider," when I first came here, fifteen years ago, I was very fond of perch-fishing, and remember going up Gully Lake, a well-known place close by the church. It was all frozen over. I broke the ice with the punt some 200 yards to get there, then made a large hole. I have taken some twenty to thirty perch with the paternoster and minnow, by just dropping it close by the edge, but you had to be careful of your line. I am afraid that time is past. If you get two or three out of a place now, you may think yourself lucky. Why it is so I cannot understand. The water is a very nice colour; there ought to be some good fish taken shortly.—I am, &c., W. H.

FOWLS FOR FLY MAKING.

Sir,—"Bittern" and "J. B. J.," of Hull, ask for feathers, in your paper of Nov. 11, for fly-making—if I could dispose of necks of cocks, blue, red, cock-a-dandy, white and black. I live in a neighbourhood to be able to get many, and could start selling, but do not know gentlemen to supply. I could sell them, no doubt, at 1s. 6d. on an average, if I could get a sale. Of course, honey duns would be worth more (cocks' hackles).

I keep the blue game, and could sell some good hens. I have one hen now with feathers as good as a cock; it is very old, and the feathers are good (blue, with gold edges). Bitterns are often shot—the winter scarcely ever passes that I do not get some.

I shall be glad to know still further if the scale-rule is found to correspond with the answers given in your Gazette, as regards weight of trout?

Whilst I am writing I shall be glad to know of the breeders of game fowls for fly-tying? It is said there are few left, and I hear that Devonshire is likely to contain the most of the almost extinct breed of fowls once so highly prized as English fighting birds.

Could a prize be offered at any show to encourage the breeding of fowls for fly-tying? I will gladly give my mite, and I should not be surprised to find many colours now supposed to be lost revived again.—I am, &c.,

North Devon.

THE "BROUGHTON POINT," "BLUE UPRIGHT," &c.

Sir,—I thank "J. T. H." for his description of a new mode of dressing the "cuss." I hope to try it next season, and, if successful, report the result.

As to the fly known as "Broughton point," I had some of these from a well-known angler named Broughton about fifteen years ago. He lived near Penrith, I think, and the fly was named after him. The body was blue silk, and the other dressings just as "J. T. H." states. I used it unsuccessfully on the Usk, but afterwards killed well with it in Ireland, around Dublin, and again in streams in the northern parts of that country. A favourite Irish fly is dressed in very much the same way, with the addition of silver tinsel to the body, and minus the red fibres at the shoulder. I have a fair stock of "Broughton points" by me now; they kill well here in spring, and at any time when the water is high. I had them dressed last season.

"Arncliffe" should try the "blue upright"—dressed with a dark blue game cock's hackle—among the streams in the North. It is generally considered the most deadly fly in Devon waters where I have fished, and I have had rare sport with it in Ireland. The difficulty is in getting the proper hackles. Nearly all I had are now made up into flies, but I enclose him a few large-sized ones, so that he may see what they are like, together with a "blue upright" as a pattern. If he could spare me one or two dotteril feathers, I would use them here experimentally in place of feathers from beneath the starling wing which I have made do duty for dotterils.

A friend of mine who goes in largely for blue game fowls lately bought some blue game pullets from Miss M. Badder, Welcombe Park, Stratford-on-Avon; possibly that lady may have some more birds to dispose of.—I am, &c.,

Tiverton, Nov. 28. R. A.

A MONSTER PIKE.

Sir,—I have come across the following extraordinary story, and have no doubt but it will interest your readers:—

"About seventeen years since (the event happened in 1822), when visiting the late Marquis of Clanricard, at Portrunna Castle, two gentlemen brought to the Marquis an immense pike, which they had just caught in the River Shannon, on the banks of which they had been taking their evening walk. Attracted by a noise and splashing of the water, they discovered in a little creek a number of perch driven on shore, and a fish which, in pursuit of them, had so entangled himself as to have a great part of its body out of water. They attacked him with an oar, which by accident lay on the bank, and killed him. Never having seen any fish of this species so large, they judged it worth the observation of the Marquis, who, equally surprised at its magnitude, had it weighed, and to their astonishment it exceeded the weight of ninety-two pounds. Its length was such that when carried across the oar by the two gentlemen, who were neither of them short, the head and tail touched the ground." I am well acquainted with that part of the river (Lough Derg, commonly called the "Broad Shannon") in which the event happened, and have seen very large specimens of pike taken by some of the old fishermen.—I am, &c.,

Thomas Glynn.

26, Falmouth Road, S.E., December 11.

[We have a strong conviction that if Mr. Jardine or Mr. Knechtli or any other big "pikist" were to try the Shannon, the result would be some of the biggest pike ever seen. Some years ago, when getting some flies at Mr. Bowness's, in the Strand, he showed us some artificial spinning baits, which some Irish lord had ordered for pike fishing. If we remember rightly, none of them were less than eight inches in length, and some much larger still. Mr. B. said his customer found the big pike would not trouble themselves to go for an ordinary bait.—Ed.]

MR. ANDREWS' LARGE ROACH.

Sir,—Will Mr. Andrews, of the Piscatorial Society, be good enough to give the length and depth of the 2 lb. 14 oz. roach which he took in the Thames last week, as reported in the Gazette, and oblige the members of the Westbourne Park Piscatorial Society, who have had some discussion as to the length, none of the members having seen one so large?—I am, &c., H. Adeane.

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

FACEACHE, TOOTHACHE, PAINS IN THE GUMS, NEURALGIA. —Adam Smith's Neuralgine is a Certain Cure. Bottles, 1s. 1½d., 2s. 9d. Post free from Proprietor, Chemist, Wednesbury. London Agent, W. Edwards, 157, Queen Victoria Street; and all chemists.

THE HANDBOOK
TO THE
RIVERS AND BROADS
OF
NORFOLK & SUFFOLK.

By G. CHRISTOPHER DAVIES,
Author of "The Swan and Her Crew."

With a Splendidly Coloured Map of the Rivers and Broads.

In Paper Boards, 1s. 6d. Cloth, 2s. 6d.

JARROLD and SONS, 3, Paternoster Buildings, London, and Norwich. And all Booksellers.

80,000 Parrots Imported Annually.

A beautiful African Grey, with crimson tail, sent to any address, package included, for 15s. If not satisfactory on receipt, money returned. A host of other stock. Beautiful Singing Canaries, small foreign birds, Pet Monkeys, Tortoises, Peacocks' Feathers, 5000 Parrot Cages, and fresh arrivals daily. The Grey Parrot—the Thirty Guinea Bird—that took the two first prizes at the Surrey Show in 1878 and 1881, was purchased from me a young bird.

WILLIAM CROSS, Largest Importer in the World, LIVERPOOL.

100,000 BIRDS IMPORTED ANNUALLY.

On view daily at 166, Great Portland Street, London, W.
(Two minutes' walk from Portland Road Station),

The Largest and Cheapest Collection of British, Foreign, and Continental Birds, German Canaries, Piping Bullfinches, Talking Parrots. All soft-billed birds kept in stock.

One visit is sure to give satisfaction.—E. Etable.

A SPECIALTY.

The "Trent Otter's" celebrated 5s. rod, for chub, barbel, or bream fishing; lighter rods for roach alone; and heavier rods for pike trolling or trout spinning. Any length from 10 to 12 feet. Best material, and workmanship guaranteed. Best ferrules and counters; solid upright rings, winch fitted. The best and cheapest rod in the market. Will give satisfaction to every angler. Try one. (Carriage extra.)

"I consider your rod a marvel of finish, strength, and cheapness."—Yours, &c., J. H. L. Wrexham.

"GOOD THINGS,"

MADE, SAID, AND DONE, FOR EVERY HOME AND HOUSEHOLD.

"The book embraces a wide field of usefulness."—*British Workwoman.*

"Can scarcely fail to prove of service."—*The Rock.*

PLEASE MENTION THIS PAPER.

COUGHS, COLDS, ASTHMA,

BRONCHITIS and NEURALGIA.

DR. J. COLLIS BROWNE'S

CHLORODYNE.

A few doses quite effectual.—Caution.—The extraordinary medical reports on the efficacy of Chlorodyne render it of vital importance that the public should obtain the genuine, which is protected by a Government stamp, bearing the words "Dr. J. Collis Browne's Chlorodyne." See decision of Vice-Chancellor Sir W. Page Wood, *The Times*, July 16, 1864. Numerous testimonials from eminent physicians accompany each bottle.

From W. C. Wilkinson, F.R.C.S., Spalding:—

"I consider it invaluable in phthisis and spasmodic cough: the benefit is very marked indeed."

Sold in bottles, 1s. 1½d., 2s. 9d., and 4s. 6d., by all Chemists.

Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell Street, W.C.

Cannon's Glue Powder

Sold in Penny packets. Equal in strength and quality to the best glues made. Useful in every house. Dissolves immediately in boiling water. Sold by Chemists, Grocers, Oilmen, and Stationers. Can be obtained wholesale from W. B. FORDHAM and SONS, York Road, St. Pancras, London; or from B. CANNON and CO., Manufacturers, Witham Leather, Glue and Parchment Works, Lincoln, England.

NO MORE WET FEET.—If you once use MILLEN'S SNOW and WET REPELLER and SOLE PROTECTOR, for Winter and Summer, you will not regret it. 5s. to 7s. saved for Sixpence. Although it is a speciality for the bottoms of the soles, it is equally beneficial to leather and kid uppers, not only rendering them quite waterproof, but more durable; also the original shape of the boot is kept until quite worn out, which gives a corresponding benefit to shape and ease of the foot, For Children's and Ladies' Shoes, also the heavier made boots, it is invaluable. Only one application, as directions, will last until the soles and uppers are worn out. Shoes can be blacked in the usual way. Sent free for 7d. or 1s.—Postal Orders or stamps, from Humphrey Millen, Fern Factory, Little Marlow, Bucks.

INDIA-RUBBER STAMPS. For Endorsing Envelopes, Cheques, and Postal Cards Heading Note Paper, Marking Linen, Stamping Monograms, Crests, and Facsimiles of Signature.

THE "PREMIER" DATING STAMP.
With Solid Rubber Dates or ten years, from 18s. 6d. each
THE NEW POCKET STAMP.
From 2s. 6d. each.
Price and Pattern Sheets free on Application.
JOHN BERKLEY,
6, LIVERY STREET, BIRMINGHAM.

Suitable Christmas and New Year's Present.

I will send, on receipt of P.O.O. for 14s., a Box of good Foreign Cigars (Princesas Brand). They are of excellent flavour, and burn with a clear white ash. Sample of seven sent on receipt of 12 stamps. —Address, C. Roux, 9, Talfourd Place, Peckham, London, S.E.

A Wonderful Curiosity.

Now ready, a few more beautifully-finished PADLOCKS, MADE FROM TWO THREEPENNY PIECES, fitted with key and warranted in working order. They form an elegant ornament for the watch-guard, or may be used as an ordinary lock. Numerous unsolicited testimonials have been received, accompanied with further orders. They would be very suitable for a Christmas Present for either lady or gentleman, as they are a marvel of workmanship and a genuine curiosity. Post free, 30 stamps.—"G. B.," 29, Pearson Street, Spring Bank, Hull.

Special Prices to Wholesale Buyers.

GISHURSTINE for Dry Feet and Boot Comfort is much used by Sportsmen, Shore Waders, Farmers, Gardeners, and Ladies.

Sold by Nurserymen and Oilmen, with testimonials and directions for use, in boxes 6d. and 1s. each. Wholesale by Price's Patent Candle Company, Limited, London.

LOST.

A BAIT CAN, containing Enclosed Can of Perforated Zinc, Spoon Bait, and other Pike-Fishing Tackle. Was last seen at Whitchurch Station, Salop, on the evening of the 8th November last. Anyone restoring it to the owner will be rewarded. —Address, Box 25, Post Office, Hyde.

FISHING & SHOOTING SEASON

NO SPORTSMAN should leave for the RIVERS OR MOORS without having his Boots dressed with

STRAWSON'S WATER-PROOF.

WATERPROOF

This Waterproof has obtained a world-wide reputation, and has been used by the leading Sportsmen for upwards of Twenty Years. It does not act like a varnish, by hardening on the surface of the leather, but penetrates the fibre, softening and preserving it. Shooting and other Boots dressed with it will resist the action of Dew, Rain, Snow, and Sea Water. It is especially good for keeping the Soles of Boots and Shoes Waterproof, increasing the comfort of the wearer by its softening effects on the leather, helping to prevent blisters and chafing to the feet.

All Classes who are exposed to the many changes in the weather should use it as a matter of economy in preserving their Boots, and preserving their health, by keeping their feet dry.

Opinion of a well-known Angler—

"I have often stated (and always asserted in my books) my belief that your Waterproofing is the BEST IN THE WORLD for sporting purposes, and indeed the only one which will keep out Melting Snow."

Yours truly, H. CHOLMONDELEY PENNELL.

Important Offer to the Readers of THE FISHING GAZETTE.

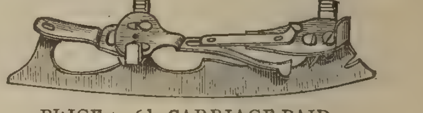
SKATES! SKATES!! SKATES!!!

AT PRICES TO SUIT ALL.

THE extreme mildness of last winter, and the consequent depression in the Skate trade, enabled us early in the spring of the present year to purchase for CASH a Manufacturer's stock, comprising 5000 pairs, at a price never before known in the English markets, and we now offer them to the readers of this journal at an unprecedentedly low price; and, in order to effect an immediate clearance of the entire stock, we have made special arrangements with Messrs Sutton and Co. to send all parcels CARRIAGE PAID. This, we feel sure, will meet with the cordial support of the thousands of readers of the Fishing Gazette who have hitherto favoured us with their patronage.

CONDITIONS OF SALE.—As soon as you receive the Skates, if not well satisfied with your bargain, write to us, and we will return you the money.

ACME SKATES! ACME SKATES!!



PRICE 5s. 6d., CARRIAGE PAID.

If stamps, 3d. extra.

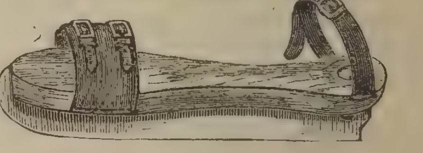
Sizes—8½ 9, 9½, 10, 10½, 11, and 11½ inches.

All Sizes one Price.

The above pattern is too well known to require either description or comment. We need only say that they are of A1 quality, warranted steel blades, best finish and workmanship, and we guarantee them equal to any Skates usually retailed at half-a-guinea per pair.

Very superior quality ditto, beautifully nickel-plated, price 10s. 6d. per pair, carriage paid.

Hard Polished Wood, with Broad Toe Strap.



PRICE 3s. 6d. CARRIAGE PAID.

If Stamps, 3d. extra.

Sizes—8, 8½, 9, 9½, 10, 10½, 11, and 11½ inches.

All Sizes one Price.

This is our speciality in Wood Skates, and they are a marvel at the price. Each pair is polished all over, and fitted with two broad toe and heel straps, made of best leather and hand-sewn. The blades are well steeled, and in appearance and wear are unequalled by those costing treble the money.

This pattern can also be had in polished Walnut, with brass toe caps, and fitted with best leather straps. Price 5s. 6d., or 69 stamps, carriage paid.

Hundreds of testimonials from all parts of England, Ireland, Scotland, and the Continent.

As a great rush of orders is expected, early application to ensure immediate delivery will be necessary. Orders will be executed in rotation, and when possible same day as received, and despatched per Sutton and Co., carriage paid. Size of Skates should be ascertained by measuring the full length of boot from toe to heel.

Send for a pair, and if you are not satisfied and amazed, have your money back

Our Illustrated List of Skates and other Specialities will be sent post free on application.

P.O.O.'s payable at the G.P.O., London, to **DRALLIM and OLIVER, 18, Ironmonger Lane, London, E.C., (and at Croydon).** Please mention this Paper.

I TELL YOU, BUY AN A.B.C PIPE
AND DON'T YOU FORGET IT"

EVERY MAN WHO SMOKES

should send 24 stamps for Sample Pipe.

No wet Tobacco to smoke through. No filthy oil to enter the mouth. Smoke always sweet and free, and can be instantly cleaned. The most perfect pipes invented since smoking began. 10,000 Testimonials. Illustrated prospectus free. With amber and case, 5s.

SATURDAY, DECEMBER 23, 1882.

NATIONAL FISH CULTURE ASSOCIATION OF GREAT BRITAIN AND IRELAND.

MEETING AT THE FISHMONGERS' HALL.

A PUBLIC meeting was held at the Fishmongers' Hall, London Bridge, on Wednesday afternoon last, for the purpose of establishing a National Fish Culture Association of Great Britain and Ireland.

There was a good attendance of gentlemen interested in the subject. The chair was taken by Edward Birkbeck, Esq., M. P.

The Chairman, in opening the business of the meeting, said:—

"Gentlemen,—The matter that we are met together to discuss, namely, the establishment of a National Fish Culture Association of Great Britain and Ireland, is, in my opinion, one not only of deep interest to us all, but also of vital importance to the community at large, and I must congratulate those who are taking this matter up on their being honoured with the presence to-day of many gentlemen who are so well known for the interest they take in pisciculture. The Legislature has done much to protect our waters and protect the fish that we have got in them; but in consequence of the vast numbers of anglers, and also the great and ever-increasing demand for fish as a food supply, our waters do want something more than what we have now—simply protection for the fish that are in them. The question of fish culture is one deserving of every attention and every support by us all. There is no doubt that, in an agricultural point of view, every acre of land in England is as highly farmed and cultivated as possible; but I regret to say that thousands and thousands of acres of our beautiful waters do not give that supply of fish which they might do if fish culture were thoroughly well gone into, and in the same manner as it is in America, Canada, and many other places throughout the world. I think you will agree with me that those countries I have named set us a bright example, not only as regards fish culture for inland waters, but also as regards, what to my mind is of the utmost consequence, our sea fish culture (hear, hear). That is a matter that, I am glad to say, this proposed association will take up, and it cannot be otherwise than of the utmost importance. Well, gentlemen, much has been done by private enterprise up to the present time. The names of Lord Exeter, Sir James Maitland, Mr. Capel, Mr. Andrews, and many others, are well known to you. They have done much, and I may, just in passing, allude to a small society which I have the honour to be president of, namely, the Norfolk and Suffolk Acclimatisation Society, which was started about three years ago. That society has done a great work, up to the present time, in my own district of Norfolk and Suffolk, and the hon. sec. (Mr. Oldham Chambers) has, I am glad to say, now taken up the question of sea-fish culture with great success. But though these private gentlemen have done so much in favour of fish culture, still the public will say that the question of a National Fish Culture Association is worthy of all support by the community at large, and I rejoice to think that there is a good prospect that when our foreign and colonial friends arrive—whom we hope to give a hearty and warm welcome to in London when the International Fisheries Exhibition is held—we shall be able to tell them that though England has been very slow in moving in the matter of fish culture up to the present, still we can boast of a National Fish Culture Association. I can only say that, as regards myself, this movement has my warmest support, and I shall do my best to assist it. I hope that this meeting will speak out with no uncertain voice on this matter, and bring this question prominently before the public as one worthy of support, and one which I very strongly hope the Government will in time see their way to give the same assistance to that the American and Canadian Governments give to their fish culture establishments. Before I call upon Sir James Maitland to move the first resolution, I may say that letters have been received from a great number of gentlemen throughout England and Scotland, all strongly in favour of this movement. Dr. Gunter, of the British Museum, writes very strongly indeed. We have also had letters from Dr. Wills, Mr. Youl, Mr. Andrews of Guildford, Mr. Archibald Young (Inspector of Fisheries for Scotland), Mr. Burdett-Coutts, Mr. Louis Buxton, and Mr. Brady (the Inspector of Fisheries for Ireland), as well as from many other gentlemen."

Sir James Gibson Maitland.—"Mr. Chairman and Gentlemen, in the unfortunate absence of Lord Exeter, I have been called upon to move the first resolution, which is to the effect 'that in the opinion of this meeting it is desirable that a National Fish Culture Association of Great Britain and Ireland should be established, for the purpose of improving and extending the cultivation of our fresh and salt water fishes in the best possible manner.' Of the advisability of establishing this association, I think there can be no doubt, and the objects of it will be very beneficial to the country. At the present moment there are very great difficulties in the way of pisciculturists. Even in Scotland, at the present moment, we have no reports from our salmon commissioners of the nature of the English report. There are no means of communicating with foreign countries and learning what great strides have been taken in Austria, in Germany, in America, and in our colonies. This association will provide a convenient and, I hope, a very perfect method of putting us on a par with the pisciculturists in all parts of the world, from which, I hope, not only we ourselves, but they also, will derive great benefit. The question of cultivation of fish in this country is almost in its infancy; if I mistake not, it has only been studied five or six years in America, and considering the enormous value of fish as a cheap and nourishing food, considering the enormous population we have engaged in the industry, and the great portion of the national wealth which our fisheries constitute, we must all see the importance of developing them. Those fisheries depend very much on the food of the fish. The habits of the herring have been studied by Mr. Mitchel and others; but even now there is a very great uncertainty as to why or wherefore herrings frequent our coasts at different times. We know they come into the Forth to spawn in March, but we do not know where they are in January. It is highly probable that the migrations of the herring are to a very large extent affected by the food on which it feeds, and I hope the question of the food of fishes, both salt-water and fresh, will form one of the objects of this association. I think that what we ought to aim at is this: the association should be national in its character, and cosmopolitan in its objects. I have great pleasure in moving the first resolution." (Applause.)

Professor Huxley.—"I came to this meeting, gentlemen, for the purpose of listening and learning; but our friend, the chairman, insisted upon my speaking, and I am very glad indeed to obey his behests, particularly in regard to seconding the first resolution. I think there can be no sort of question about both the practical and the scientific importance of the objects of the society, and I may venture to say that I look upon the movement which is now taking place as of two-fold importance—not only on account of its positive value, but because you have in the composition of your council, and especially in the person of my friend, Sir James Maitland, a great guarantee that whatever is undertaken in this way will not be undertaken hastily and without consideration. Those who have looked at the progress of fish culture from the time that a large movement was set on foot in France by M. Guise, some thirty years ago, will assuredly not wish to see repeated in this country the extremely unfortunate experiment which was made in France, when the plan having succeeded by a sort of fluke, for the first year, and succeeded wonderfully, companies were formed and large sums of money were subscribed for carrying on operations, the conditions of which had not been carefully studied, and the difficulties and the dangers in the way of which had not been duly considered for the want of proper practical knowledge. The result, as everybody knows, was that a very great proportion of the money then invested was lost, and that a large number of the undertakings which followed upon the stimulus came altogether to grief. There is no one, perhaps, who is so thoroughly familiar with, and who has so scientifically studied the conditions of salmon culture as Sir James Maitland, and I am sure he will apply the practical knowledge and the critical power he has gained in that particular study to all other kinds of fish culture. In this country I think our backwardness is very largely due to the fact that we are practically spoiled by the extreme abundance of admirable sea-fish of all kinds. It has hardly been worth while to extend fish cultivation to anything but salmon up to this time; but what the chairman observed is quite true—that the demands upon our sea-fish are becoming greater and greater, and that it certainly behoves us to look about, and see whether, in the first place, there is a clear occasion for endeavouring to supplement the efforts of nature in supplying that demand, and in the second place, if that should turn out to be needful, then to devise measures which may be justly calculated towards the bringing about of that end. Speaking of the matter as a man of science, I must say I look upon the movement with great interest, for it is perfectly certain that whether it be to a great extent practically necessary and successful or not, the operations of the society will give us an amount of knowledge of the early conditions of sea-fish, of their food, and the conditions under which they develop, and under which they flourish, and of the enemies to which they are exposed, of which at present we have hardly an appreciable fraction. I was for a long time a Sea Fisheries Commissioner, and I must confess that nothing struck me so much in the course of the inquiry as the extreme ignorance of the fishing population with regard to everything about fishing, except that which related to catching them. It was absolutely impossible to obtain in the course of those inquiries the commonest information about the habits, and many essential points, with regard to the mode of life of every-day fish. Whatever happens to this society, I am sure it will make good the deficiency which still to a great extent exists. I am extremely glad to see the society formed, and I have great pleasure in seconding the resolution."

The Marquis of Exeter having arrived, the chairman called upon him to support the resolution.

The Marquis of Exeter.—"Gentlemen,—In obedience to your chairman's call, I rise to say a few words in support of the resolution; but I confess I am hardly prepared to make a speech on the present occasion, there having been so short a notice. I hope, therefore, you will excuse me if my remarks are very brief. All who know anything about pisciculture and the fishery interests of Great Britain are agreed that we are very far behind some other nations in matters pertaining to the welfare of our fisheries, and I was exceedingly glad when I received a letter stating that it was proposed to hold a meeting with a view to establishing a National Fish Culture Association of Great Britain and Ireland. Fishing about in different parts of England as I do, I have many opportunities of seeing how much is wanted for the encouragement and protection of our fisheries. Not only do the fisheries require protection, but I think it would be a very great thing if fish culture could be carried on by associations. We have plenty of it carried on privately, but there are very few who have sufficient funds or means for carrying out pisciculture to a large extent. Not only should it be conducted on a large scale with regard to fresh water fish, but I believe it might be carried out very successfully so as to greatly increase the supplies from our sea fisheries all round the coast. I am therefore very glad to have an opportunity of saying a few words in support of the motion, and I am exceedingly pleased that Mr. Birkbeck and some of my friends here have thought proper to invite gentlemen to attend a meeting with a view to establishing a National Fish Culture Association for Great Britain and Ireland."

Mr. Barrington Kennett.—"Mr. Chairman and gentlemen,—I shall confine my remarks to what, no doubt, we all consider a most important branch of fish culture, namely, the purification of our rivers. If this society is formed, I hope that it will devote a certain amount of its energy to that important subject It is useless to bring fish into existence if we place them afterwards under conditions in which they cannot live. Many of us must know a great many streams which would support fish-life, and in which we might enjoy fishing, and fish might increase until the streams are almost as full as those in Norway, if it were not for some mill or manufactory which pollutes the river. A great many attempts have been made at legislation in the direction of the anti-pollution, if I may so call it, of these rivers; but in some cases it is found that the manufacturers' rights are paramount—that is to say, that the interests of the manufacturers are so great that it is really almost impossible to stop the pollution. In such cases I suppose we must give up the task as hopeless, but there are a great many other cases where the manufacturer might stop the pollution of the river if he adopted proper means. And what is more, he could do this without seriously interfering with his commercial interests. The Act of 1876 was passed giving powers to Sanitary Authorities and also to certain Conservancy Boards to stop the pollution of rivers. A great many cases were tried under this Act, and it was found that very often the defence was that the manufacturer said he could not afford to pay for the cost of the work, and that if the regulations were enforced he must shut up his business. In order to prevent that, another Act was passed in 1881 (which was not generally known), forming an association very much on the same lines as the Lands Drainage Association. The object was to get over the difficulty of the manufacturer having to pay at once for all the works. The Act was very carefully drawn up, and it was provided that if the manufacturer carried out works to the satisfaction of the Local Government Board, he could borrow money through the association, and that money could be repaid by statutory charges on the freehold, such charges having priority over all other charges and encumbrances, except those due to her Majesty and under the Lands Drainage Act. The manufacturers have now very little excuse if they say they cannot afford to carry out these works. The riparian owners, the Conservancy Boards, and angling societies can say, 'Why cannot you borrow the money under the Act and distribute it over a certain number of years?' and by means of this there are mortgages or bills of sale, and the Legislature, by passing the Act, has given every assistance to the cause of fish culture. I think I ought to mention in connection with the Fisheries Exhibition that the committee have given every possible help to that association, and I only mention it now because I think it is a most important adjunct to your fish culture association. I assume that the attempt to encourage fish culture will end in our rivers being quite pure, and that we shall not have to cross the seas to find rivers well stocked with fish."

Mr. Oldham Chambers.—"Mr. Chairman, my Lord, and gentlemen,—It must, I think, be generally admitted that interest in the study of our food-producing fish is considerably on the increase, and I would venture the suggestion that that increase is to a great extent attributable to the recent National Fisheries Exhibitions at Norwich and Edinburgh, and to the forthcoming great International Fisheries Exhibition that we shall have in our metropolis next year. When it is remembered that this exhibition will be attended by some of the leading scientists of the day, I think we ought, in justice to ourselves and credit to the nation, ask ourselves if we are capable of taking part in the conference that will be held on this subject during the time the exhibition will remain open. I fear we shall say that our colonies and foreign states will be able to teach us many and many a lesson. Feeling that our representation might be considerably improved, in conjunction with my friend, Mr. Marston, and with the co-operation of our esteemed chairman and others, we caused a circular to be sent round asking your attendance here to-day to take into consideration the advisability of establishing a National Fish Culture Association, whereby our *locus standi* might perhaps be strengthened. The objects of the association are, of course, very large and important. We have in this country many acres of water entirely neglected and depleted of fish-life that would, under scientific cultivation, produce a food supply to our nation rich and remunerative in the extreme, and, we might almost be inclined to say, inexhaustible. I think it must be assumed that the success that has attended the exertions to re-stock with fish-life our rivers and tributaries would be equally successful as regards our deep-sea fish culture. During the past year I have been enabled to carry out some very interesting experiments in the artificial hatching and spawning of our deep-sea food species, especially as regards the cod (*Gadus morrhua*). I have established the fact, perhaps not devoid of value, that it is perfectly practical to transport from one part of the coast to the other the artificially fecundated ova of the cod for the purpose of improving depleted fisheries, or for the formation of fresh industries. When it is remembered that every full-grown female cod-fish sheds during the season something like eight or nine million of eggs, who after that would be able to say that experiments of this nature are not well within the sphere of our proposed association? After the young have lost their umbilical sac, it is necessary that they should be fed on minute crustaceans; and I would suggest to this association that some of those large tracts of land partially covered with water to be found at the entrances to our estuaries, and rivers, and harbours, should be utilised for this purpose. That can be done at a very small comparative cost. Our friend, Mr. John Lasseur, could tell us that the trawl fisheries of England are certainly in an unsatisfactory state. I would also suggest that the cultivation of soles and turbot should be undertaken by this association. The Legislature has very properly enacted a close time for our salmon, for our trout, for our British coarse fish, for our oysters and crabs, and lobsters, and I would ask this meeting why a similar protection should not be afforded to our soles and turbot? The period might vary in extent along the coast in accordance with their spawning precisely the same as in the case of salmon. Your chairman could tell you that the Act affecting crabs and lobsters will, next February, die out; but what do we find? The fishermen themselves are coming forward to plead for a renewal of this Act, and, as a matter of fact, we have never had so many crabs and lobsters in our markets in previous years as during the last twelve months. That is entirely to be accounted for by the protection given to those fishes. I am afraid that I have wearied you with these rambling remarks, but I do feel, as a keen and ardent devotee of the science of fish culture, that the objects of this association are certainly of the most vital importance to us, because they affect the national wealth, and I take it that the promoters of these objects will certainly do their utmost to further the great cause we have before us, and to assist in the grand work of the amelioration of our fellow-creatures."

Mr. R. B Marston.—"Mr. Chairman, my Lord, and gentlemen. It is a very great pleasure to me to be here to-day, and to see so many gentlemen from various parts of this country interested in pisciculture, who have attended in consequence of the circular to which my name is attached in connection with that of my friend, Mr. Oldham Chambers. For many years past I have given a very great deal of attention to what has been done in foreign countries in the way of pisciculture, and I am always astonished that in England, Scotland, and Ireland we have really done nothing. We have no association of any standing, more than perhaps a local angling club, which goes in for pisciculture. It is, therefore, a very great pleasure to me to see so many gentlemen here who are well known in connection with fisheries generally. There are one or two things which I should like to point out to you that an association of this kind can do. I have been asked, 'What are you going to do?' The best way to answer that question, I think, is to refer to what has been done in other countries. If we turn to Germany, we find there that there are more than 300 fish-breeding establishments and associations, at the head of them being the German Fishery Association, under the patronage of the Crown Prince. Herr Max von Dem-Borne has sent me a copy of the last report of the association, and, I think, it will suffice to show what has been done in Germany if I give you a short account of that report. Eggs distributed to various waters, consisting of salmon, sea-water trout, lake-trout, common trout, char, grayling, various species of coregonus and carp—total, more than ten millions in two years; eggs imported from America, consisting of California salmon, brook trout, rainbow trout, land-locked salmon (and I think land-locked salmon is a fish we ought to know something about in this country; probably it would be suitable to the Thames), and American coregonus—total, 1,208,000. Then he goes on to give some of the results attained by putting these fish into the waters of Germany. He says Herr Von Winterstein in Saarburg reports that in the lower Saar the yearly catch of salmon is nearly twice as large as it was in 1874, and that all the fishery inspectors report the more frequent appearance of salmon and sea trout in the river. Herr von Dem Wergen, of Freiburg, reports the appearance, in the late autumn of 1881, of numerous salmon in the Saale at Kissingen—the first time within the memory of the inhabitants that this fish had been seen there. Salmon had also been seen and caught as high up as Münster on the Weser river, where they were unknown before. Herr G. Seelig, of Cassel, reports the appearance of salmon in enormous quantities in the Weser, in consequence of placing fry in the tributaries. Then there is a long chapter giving you facts of that kind which I need not now go into. With regard to trout and grayling, there is a similar good result. If we turn to Canada, we find there about nine government fish-hatching establishments, sending out yearly millions of fry and ova. In the United States they have a National Fishers' Commission, with Professor Baird

Messrs. Livingstone Stone, Fred Mather, Seth Green, Page, and other gentlemen, whose names are well known all over the world. They are doing a great work there, and I have heard from them that they are glad we are trying to get up an association of this kind. In Australia efforts in the same direction are also being made by gentlemen, some of whom are present—Mr. Youl and Mr. Francis Francis, I wish I could also say the late Frank Buckland. How glad he would have been to see such a meeting as this. About sixteen years ago, Mr. Buckland and Mr. Francis Francis collected a lot of trout ova in Hampshire, and Mr. Youl sent them out to Tasmania and New Zealand. At the present day those rivers are swarming with splendid trout. I had an account the other day from a member of the Otago Club, in which he says that their president (Mr. Stoddart), in two days caught twenty trout, weighing 80 lb., in one river. The fish go up to 20 lb., and are even said to be superior to our English fish in food qualities. I have purposely not referred to what has been done in England, because there are gentlemen here who practically know more about it. We have heard Sir James Maitland, and I hope we shall hear from Mr. Francis Francis something about Sir James Maitland's establishment at Stirling—one of the finest in the world. My friend, Mr. Oldham Chambers, has referred to the great question of sea-fish culture, and I think that entirely covers what I have to say. I thank you, gentlemen, for the way in which you have received me, and also for your coming here in such large numbers to support this movement."

The resolution was carried unanimously.

Sir Henry Peek, M.P.—"Gentlemen,—As the first resolution has been carried unanimously at so important a meeting as this, of course the second becomes necessary to give effect to the first. The resolution which I have the honour to propose is:—'That this meeting, knowing the interest which his Lordship the Marquis of Exeter has for many years past taken in fish culture and the introduction of valuable foreign fishes, is of opinion that it would be of great advantage to the interests of the Association if his Lordship would accept the position of President. Also, that the following noblemen and gentlemen interested in fish culture should be asked to become Vice-Presidents:—Their Graces the Dukes of Wellington, Sutherland, Portland, and Manchester, the Marquis of Ailsa, and Sir Samuel Wilson, Earl Ducie, Lords Suffield, Waveney, and Lovat, Sir J. Gibson Maitland, Bart., the Prime Warden of the Fishmongers' Company, E. Birkbeck, Esq., M.P., W. Burdett-Coutts, Esq.' I think you will agree with me that a better selection of names could hardly be put before you, and you will join with me in the cordial wish that this association may be a success. I take an interest in it because for more than fourteen years I have represented more than fourteen miles of river frontage to the Thames. I am sorry to say that our work there has been limited rather than positive. We keep associations there for putting down poaching and that sort of thing, but I am afraid we do not do so much towards the positive part of the business—stocking the river with fish—as we might do. I am very glad indeed to think that this association is started to take up in a practical and systematic way every branch of this important subject. One of the preceding speakers spoke of many rivers being so polluted that fish life becomes impossible. When he was speaking I thought how important that matter is. I recollected some twenty years ago there was a very large factory which sent out such very bad fumes that no vegetable could live within half a mile of it. The manufacturers were voted a great nuisance: public opinion was brought to bear upon them; they took that matter in hand, and they positively succeeded in so condensing those noxious fumes that for many years afterwards they brought them in no less than £10 or £15 a week. What had been thrown into the atmosphere to the detriment of vegetable life and the discomfort of everybody living within half-a-mile, was really converted into a source of profit to the extent I name. I cannot help thinking that by the circulation of information on all points connected directly or indirectly with fish culture a great deal of good may be done, and a great deal of interesting reading may be furnished for people who take an interest in sea or freshwater fisheries. I am very pleased to be here to move this resolution."

Mr. Francis Francis.—"Mr. Chairman, my Lord, and gentlemen: I did not come here prepared to speak to any resolution, therefore my remarks will necessarily be brief. The Chairman and Mr. Marston have both referred to the fact of our being somewhat slow to move in establishing a Pisciculture Association; but I must take leave to say that I established one something like twenty years ago. For two years we had a great and most promising success; in fact, it looked at one time as though we should make a great national affair of it, but unfortunately differences arose, and it was scotched almost in its inception. From that time it has been an example to those interested in the subject, and perhaps may account for their slowness in again taking up the matter. Mr. Marston has been kind enough to refer to the stocking of the rivers of Tasmania and New Zealand with trout. It certainly has been a marvellous success. When they get over to New Zealand, the trout appear to grow to be finer fellows than their fathers and mothers in England, and I believe that a change of the kind is sometimes beneficial both to the human race and to fish. That was carried out by a small and almost accidental matter. My friend, Mr. Youl, applied to me to give him a few ova to send out, and I think I sent him some 600 or 700, and Mr. Buckland gave him about the same number. From those the greater portion of the rivers of New Zealand, and Tasmania are now stocked with certainly most magnificent trout. It only shows how a very small matter may sometimes turn out a very great success. Then Mr. Marston has also referred to Sir James Maitland's establishment, and to ask me to say what I saw there. Really, the difficulty I feel in the matter is to say what I did not see there. It was the most prodigious sight I ever saw. In one pond, about 60 or 70 yards long by perhaps 30 or 40 wide, there were something like 1800 enormous trout, from 2 lb. to 5 lb. a-piece, all in the most perfect health and condition. If in a small pond like that you can have a stock of trout that would do credit to a great many miles of river, I say it is a most extraordinary result. It certainly astonished me. I never saw anything else in the way of pisciculture at all to approach it. As to the smaller stocks of fish, you must go and see them yourself. I cannot give any description of them. It is an extraordinary sight. Swarms of fish of all sizes come up to be fed, and they seem to know the feeder as well as domestic animals do. Sir James Maitland told me when I came into the room that he had just been engaged in sending off a large stock of trout ova to rivers in Natal. Although Natal is a very warm climate, it is not too warm, I believe, for trout to flourish. The rivers are most magnificent. Some are perfectly pattern trout rivers. I have had many letters from many people in that country, who spoke very highly of the rivers and their capacity. Last year Sir James Maitland—for I really had very little to do with it—sent out ova; but owing to some delay occurring at the landing they did not succeed. This year, however, profiting by the experience of the past, an excellent arrangement has been made, and a quantity has been sent out. There will be no delay, and, I believe, the matter will be successful. There is one thing that perhaps I may say with regard to an association of this kind, and that is, that if you want to make it a popular association, a very important factor in our life at the present time is the working man. If you do not consider the working man you will be nowhere, and there is a great opportunity of considering him in this matter. We have, in London, large spaces of water in the various parks, in which there is at present a small amount of fish; but I am of opinion that these spaces might be stocked with fish of various kinds, and might be kept so to a very large extent, and, by means of judicious arrangement, certain well-disposed working men might be able to obtain tickets from time to time to amuse themselves on the banks of those waters. It would be a very excellent resource, and a very great change from nothing but the publichouse. They have the parks certainly to walk in, but they sometimes want something more than that, and I think that is a matter which might be taken up by an association of this kind. It would be an extremely popular thing, and it would certainly tend to give the association a certain amount of public character and public support. I am very pleased indeed to see our worthy chairman here, who is always at the head of every movement of this kind, and who certainly has made everything he has taken up a success; therefore his name is a warrant for the success of this association, and I have not the slightest doubt that it will be a success. Gentlemen, I have very great pleasure in seconding the resolution."

The resolution was unanimously agreed to.

The Prime Warden of the Fishmongers' Company.—"Mr. Birkbeck, gentlemen—The resolution I have been requested to move is as follows:—'That the following gentlemen interested in fish culture be asked to form the Council (with power to add to their number), to draw up rules and hold meetings for the management of the association and its properties.

Sir James Gibson Maitland, Bart.

E. Birkbeck, Esq., M.P.
Professor Huxley.
W. Burdett-Coutts.
Dr. Francis Day.
Lieut.-Col. Stuart Wortley.
C. L. Buxton.
T. J. Mann.
P. Geen.
J. P. Wheeldon.
F. C. Clench.
J. Forbes.
Francis Francis.
Lieut.-Col. Custance.
Archd. Young.
C. Fryer.
W. Senior.
A. Jardine.
C. C. Capel.
Greville Fennell.
T. Spreckley.
H. Ffennell.
O. T. Olsen.
T. Andrews.
W. Oldham Chambers.
C. Bates.
R. B. Marston.

I think it is not necessary to add anything in proposing this resolution. The names have doubtless been fully considered. I am only sorry that my engagements in connection with this company in another part of the building prevented my hearing the discussion, which I am sure has been a very interesting one. I have great pleasure in moving the resolution."

Mr. Youl.—"Mr. Chairman, my Lord, and gentlemen—I have very great pleasure in accepting the honour your chairman has conferred on me in asking me to second this resolution. I shall take the opportunity of correcting a little mistake which my friend, Mr. Francis Francis, has fallen into, with regard to my request to him to send the trout ova out to the Australian colonies. I do so as a warning to the committee to take care what they do in introducing fish into rivers. I did not make a request to Mr. Francis Francis to send trout out there on that occasion: it was a voluntary gift on the part of Mr. Francis Francis. I then had the determination not to send the trout out until I had secured the salmon in the colonies, because I knew, from the experience I had gained, that the trout grew a great deal faster than the salmon, and that they would become the greatest enemies the salmon could have in the waters of the colony. So much was I impressed with that feeling—and it was borne out by the advice of friends who were more skilful than I was in the matter at that time—that when Mr. Frank Buckland sent me the first contribution of ova, I hesitated whether I should not throw it into the docks so that the ova should not go out there at all. I should have done so, but for the fact that the ship went to Melbourne, and I consigned them to Mr. Edward Wilson, President of the Acclimatisation Society, urging him to keep them there, because if he sent them to Tasmania they would be the greatest enemies of the salmon. It was like establishing a new country, and sending out sheep and wolves at the same time. Over and over again I have written to a friend of mine there, 'For goodness sake destroy all the trout in the Derwent, or put them in rivers where there are no salmon.' The trout have grown and increased beyond all possibility or conception. The eggs were sent out in 1864. I received 1800 in two lots from Mr. Francis Francis, and 1200 from Mr. Frank Buckland, and now not only are the rivers of Tasmania and New Zealand stocked with them, but there are also a great number of them in Victoria. They have also been bred in South Australia, which I thought had a climate most unsuited to them, in consequence of the smallness of the streams and the dryness. I take this opportunity of saying that it was in consequence of the letter I wrote to the *Times*, that my friend, Mr. Francis Francis, sent me that contribution, and not as the result of any request by me to him. Afterwards I did make a request, because I wanted them for Victoria. I am sorry to say that the labours of Mr. Francis Francis and Mr. Frank Buckland in giving me ova at their own expense, and sending them down to the ships, have never yet been properly recognised. If they had been, I think there would have been a great inducement to other people to help me in the various shipments I have since made, and I should have received a great deal more assistance than I have. I think we should be very cautious as to what fish we introduce into the rivers, so that we do not destroy the natural fish in the rivers. With these few observations I have great pleasure in seconding the resolution."

The resolution was put and carried unanimously.

Dr. Francis Day.—"Mr. Chairman, my lord, and gentlemen,—I have been called upon to move the following resolution:—"That Sir James Gibson Maitland, Bart., be asked to become Chairman of the Council, and Mr. Francis Francis, Deputy Chairman. That Mr. W. Burdett-Coutts be asked to become Treasurer. That Messrs. Coutts and Co. be Bankers. That Mr. W. Oldham Chambers and Mr. R. B. Marston be asked to become Honorary Secretaries of the Association. That the Annual Subscription for Membership be One Guinea, and that a Donation of Ten Guineas secures Life Membership.

I do not think it necessary that I should offer many remarks with reference to these gentlemen. We all know Sir James Gibson Maitland, and what he has done with reference to pisciculture. Within the last few weeks I was at his piscicultural establishment, where I saw thousands of eggs he was preparing, and which in due time will be hatched and sent to all parts of the country. We also know Mr. Francis Francis, one of the most expert anglers in this country. Nobody in the United Kingdom has the good of fishing more at heart. There is one little thing I should like to mention, and which I think ought to be brought before this meeting. The proposition was that the association should be called the National Fish Culture Association of Great Britain and Ireland. We have heard a great deal with reference to the pollution of rivers, but the subject could not well come under the head of fish culture, and I should like to see the title altered to the National Fisheries Institution. However, that is a matter of detail which may be settled with the committee in due time. Sir Henry Peek has suggested that we should be life members on payment of ten guineas each, and he has been good enough to hand in a cheque of ten guineas as a life member."

Mr. Crossman.—"I have much pleasure in seconding this resolution. I think when we consider, at the present time, that meat costs a shilling a pound at first hand, it is quite enough to convince us of the necessity of forming such a society as this to increase in every possible way such a brain-producing food as fish. I think the names of the gentlemen in this resolution, with Sir James Maitland as chairman, and Mr. Francis Francis as the deputy-chairman, are quite sufficient to ensure the success and prosperity of this society. I have much pleasure in seconding the resolution."

The resolution was unanimously agreed to.

The Marquis of Exeter.—"Mr. Chairman, and Gentlemen,—I am really very much obliged to you for the honour you have proposed to confer upon me in electing me President of this great association, but I really feel that there are many other names down in this list of gentlemen who know a great deal more about the culture of fish than I do, and who have done a great deal more for it than I have. I feel very diffident in accepting so distinguished a post. You will allow me to say that I do think that the best president you could have would be our chairman here. He has devoted all his time and all his energies, not only to the culture of fish, but also to the promotion of the grand Norwich Exhibition, and the still greater exhibition which we hope to successfully hold next year. The are other gentlemen who are far before me in pisciculture."

The Chairman,—"The resolution has been carried."

The Marquis of Exeter.—Then I suppose, gentlemen, I am in your hands. I really must thank you again for conferring on me the honour of being your President. It is entirely owing to your kindness that I am put in this position. I will now proceed to the next duty I have to perform, and I assure you it is a very pleasant one. Very little will be required from me when I mention the name of the gentleman to whom I ask you to pass a vote of thanks—Mr. Birkbeck, our chairman. I am sure we must all feel how highly indebted we are to Mr. Birkbeck for the interest he has taken in all matters relating to fish culture, whether in his own country or elsewhere. To him, too, we mainly owe the success of this meeting to-day. I call upon you to pass a hearty vote of thanks to Mr. Birkbeck for his kindness in taking the chair, and for the able manner in which he has performed the duties of chairman." (Applause.)

The Chairman.—"Lord Exeter and gentlemen,—I assure you I am deeply gratified at the noble Marquis's kind expressions. It has given me the greatest pleasure to be here, and I consider it a very great honour to have been asked to preside at so very important, and, I venture to say, highly successful, a meeting as this has been. I hope and trust it will lead to most successful results, that not only pisciculturists, but the community at large will be proud of, so that we shall be able to tell our foreign friends, as I said before, that Great Britain has a National Fish Culture Association worthy of this great country. I thank you most sincerely. There is one matter which ought to be brought to your notice: I wish to express, on behalf of all here present, our deepest gratitude to the Prime Warden and the Warden of the Fishmongers' Company for their kindness in placing this hall at our disposal on this occasion."

The Prime Warden.—"I beg to thank you for your kind expression of thanks. I am only glad that any portion of our building has been applied to so useful a purpose as that which has brought you together."

The proceedings then terminated.

Many subscriptions for annual and life membership were promised in the room and by letter. Mr. Marston and Mr. Chambers received many congratulations on the great success of the meeting. It is proposed to hold a meeting of the council early in January. A great many letters have been received from noblemen and gentlemen promising to support the movement.

THE GRESHAM ANGLING SOCIETY.

The special musical evening given by this society on Tuesday last proved an unqualified success, and of which we must defer a detailed report until next week. Suffice it for the moment that Mr. Franklin Clive, a vocalist of exceptional powers, and splendid bass voice, delighted the audience by singing several songs, which were boisterously encored. The Messrs. Fennings displayed their talent in solos on the violin and violoncello, playing with a touch and finish that left nothing to be desired. Mr. Norman Harrison, Mr. Jardine, and many other gentlemen took part in the proceedings, also Mr. Page, the well-known musical writer. Dr. Brunton ably occupied the chair, Mr. Clench and numerous visitors from the Richmond Piscatorial and other societies being present. The Anglers' Benevolent Box was handed round to non-subscribing members only, and on being opened £4 2s. was added to the funds of that useful and worthy institution. The next paper will be read by Mr. Charles Bates on Tuesday, January 2, at 7 p.m. Subject, "Perch," and on this occasion Mr. R. B. Marston has kindly consented to preside. The paper is likely to be of considerable interest, and the committee hope to see a large attendance at this, the first meeting in the new year. The Secretary announced that Mr. Edward Bennett, of Great Yarmouth, had taken one pike of 15 lb., and it is hoped the trays will be well filled on Tuesday week.

"I am sure that my readers will be glad to learn during these very bad days on the land, when snow and slush are particularly trying to boots, of a very simple and easily-applied composition that not only keeps soft, but also waterproofs leather. It is not a new thing, for it has been in use some years, and has been a speciality with gardeners, though why gardeners should alone require dry and comfortable feet in bad weather passes my comprehension. Gishurstine is the composition, and is sold by Price's Candle Company for gardeners' boots. I have known and used it for some time, and during the past week or fortnight have found it to be really a blessing, for I have been out a good deal in most miserable slush and soft ground. It has no smell whatever, and thus a very horrid concomitant of common dubbin is done away with, while the boots can be polished with ordinary blacking immediately after its application. I feel sure that shooting-men, farmers, and all engaged in outdoor work will feel thankful for this hint, and will take very great care that in future they will share with gardeners the blessing of comfortable feet in all weathers.—*Morning Post.*

Trout Culture in North Lincolnshire.—Trout culture will be considerably advanced during the coming season in this locality. Mr. Thomas Ford, of the Manor Fishery, Caistor, has recently erected a new and convenient hatching-house, with all the appliances requisite for turning out a good supply of both ova and fry. His terms are so reasonable that he must be fairly patronized, in fact he has already orders to stock sundry fine becks and ornamental waters belonging to local gentlemen with salmonidæ. We hear he has pretty well established the Fontinalis in one of the chalk streams of the neighbourhood.

At a recent railroad dinner, in compliment to the legal fraternity, the toast was given: "An honest lawyer, the noblest work of God." But an old farmer in the back part of the hall rather spoiled the effect by adding, in a loud voice, "And about the scarcest."—*Sea World.*

"The New Crusades: a Vision and a Warning" is the title of a *brochure* which, under the *nom de plume* of "Saladin," will be published immediately by Mr. W. Satchell. It deals with what the writer regards as the socially and politically dangerous tendencies of the Salvation Army movement, and foreshadows the state of England under Salvationist domination at the year 1900.

FACEACHE, TOOTHACHE, PAINS IN THE GUMS, NEURALGIA. —Adam Smith's Neuralgine is a Certain Cure. Bottles, 1s. 1½d., 2s. 9d. Post free from Proprietor, Chemist, Wednesbury. London Agent, W. Edwards, 157, Queen Victoria Street; and all chemists.

CLUB REPORTS.

ACTON AND EALING SOCIETY.

On Friday, December 16, our members and friends sat down to a capital tripe supper, kindly given by Mr. Richardson, one of our members, who had bought one of the prize bullocks from the late Cattle Show. After supper the prizes won in the last competitions were presented by the chairman. Mr. Cook was the winner of a silver cup given by our vice-chair, Mr. W. Eydmann, for the largest jack in a competition for that species alone. The champagne that the winner passed round in the same was some of Host Brook's best. Mr. W. Howell and Mr. Eadbrooke also took prizes. The remainder of a most enjoyable evening was devoted to harmony, friend Cooper's book coming in very handy. Our next competition will be open in the Christmas week for three days, December 26th, 27th, 30th, in any public water from the bank, gross weight to win; first prize, gold pin; second, tackle case; third, bottle of brandy. Mr. E. Eydmann this week had a splendid show of roach and dace. Mr. W. Eydmann and Mr. Howell, a brace of jack each from the Colne.—Black Bag.

ANCHOR AND HOPE ANGLING SOCIETY.

Eighteen of our members fished a peg-down match on Sunday, the 17th inst., at St. Margarets, only one prize being taken. Mr. D. Davis, roach 2 lb. 13 oz. Mr. T. Bowling also had fish. Presented by our worthy host, a cup for the largest perch taken before close season; also a prize given by Mr. F. Richards for the second largest. Our members fish for the remaining three prizes left over from the 17th inst. on Sunday, the 24th inst. at St. Margaret's; pegdown.—D. Davis, sec.

ANGLERS' BENEVOLENT SOCIETY.

Since my last report I beg to acknowledge with thanks the receipt of the handsome sum of £4 2s. from the donation box of the Gresham Angling Society.—R. Ghurney, sec.

BERMONDSEY BROTHERS ANGLING SOCIETY.

The members fished for the Christmas prizes last Sunday, Mr. Frost taking Mr. Smith's (Queen Victoria) prize, value 10s. 6d., with a good show of perch from Lalham; Mr. Ayton, leg of pork, with perch; Mr. Gafney (the host prize) 1 bottle of gin. Mr. Coun and Mr. Mitchel also took prizes.—A. G. Croker.

BRIGHTON ANGLERS' ASSOCIATION.

The members of this association have been very unfortunate during the present year, owing to the bad weather in the South, so that it has been somewhat disheartening to take out the rod; therefore, nothing particular has been done in the shape of competitions, but there has been during the last month an entire change of officers, which seems to put fresh life into the whole affair. On Boxing Day, a competition is announced to take place, weather and water permitting, in the Ouse. First prize, £1; second, 15s.; third, 7s. 6d. All fish bar eels. Members will please remember that all communications must be directed to the new secretary, Henry Spink, 109, Western Road, Brighton; or to the chairman, A. Cardy, Brunswick Street, East Hove. Wind, west-south-west; water, thick; and towpath very dirty.—Paste.

Dec. 21.

BRUNSWICK PISCATORIAL SOCIETY.

The brothers of the above society mustered in very good force last evening (Wednesday) Mr. Booth, president. The business was gone through in a very satisfactory manner. Several members stand over for election. Mr. Wane was elected a member. A circular was read from Mr. Hatfield, of the Star and Garter Hotel, St. Martin's Lane, respecting the noble knights of the rod who formed a part of the Lord Mayor's procession. It was unanimously resolved that Mr. Booth be deputed to purchase a large size photo of the above, which will be framed and hung in our society room, and we hope to have the pleasure of receiving a visit from these champions of angling. Mr. Dunn weighed in a very nice jack from Wraysbury. The President and several members are going to fish a friendly match at Datchet on Boxing Day. Mr. Keeble will present an additional prize to the winner, and I am happy to state that the members enjoyed themselves after business in a very jovial manner. Messrs. Booth, Dunn, Jones, Reynolds, Bayley, Daniels, Wane, Barrett, Keeble, and several others contributed to the harmony of the evening. Mr. Allsopp presided at the piano.—Miles Doughty, sec.

BURDETT ANGLING SOCIETY.

The second annual distribution of prizes of the above society took place on Wednesday evening last, when about forty prizes were given to the successful competitors. There was a very good attendance of members and visitors, and about thirty prizes were given for the ensuing season. Mr. John Hadkiss occupied the chair, faced by Mr. Gibbons, and a very pleasant evening was spent by those present.—T. G. Walker.

CROWN PISCATORIAL SOCIETY.

The members of the above society have been out and trying very hard for Mr Welch's prize, which is given for the gross weight of all fish taken in December, most of them meeting with very bad sport. They live in hopes of getting some the next two Sundays. N.B.—Quarterly-night next Thursday, Dec. 28. Mr. Newbold gives a handsome prize for the gross weight of jack taken in January.—W. H. Burwash, sec.

Dec. 21.

GOOD INTENT ANGLING SOCIETY.

The members of the above club to the number of fifty-four, fished a pegged-down match at St. Margaret's on Sunday last for twelve prizes, but the water being so much out of condition, running like a mill stream, and so thick we could only bring off seven of them: Mr. W. Hall taking 1st., £2 and 20 lb. of beef; Mr. Guntrip, 2nd, £1 1s. and leg of mutton; Mr. Bell, 3rd, £1 1s., leg of pork; Mr. Murphy, 4th, £1 1s.; Mr. King, 5th, 10s. 6d.; Mr. Miller, 6th, 10s. 6d.; Mr. Smart, 7th, 10s., with a bottle of whisky to each. The prizes left will be fished off after Christmas with some more added.—R. Murphy.

ORIGINAL ALEXANDRA ANGLERS.

Most of our members were out on Sunday last, Mr. Towndrow had some very nice roach, some of them scaling over a pound. Messrs. Morton and Dymond had some jack, and several other members also had fish.—E. Dymond, sec.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The following members weighed in on Sunday last:—Mr. Laundy, jack and roach; Mr. Edwards, roach, from the Thames. On Monday, the half-yearly distribution took place. Mr. Marshall, in the chair, presented the prizes to those successful; Mr. T. Longman winning a good ham. 5-lb. chest of tea, handsome lamp, and a roach basket; also Mr. W. Longman, prize; Mr. Laundy, a tankard, pair of decanters, and cruet; Mr. Craffard, a gold pin, teapot, and cruet; Mr. Roberts, a barometer and roach rod, with tackle book (furnished); Mr. G. Drew, 10s., given by Mr. Murray; Mr. Obbard, umbrella; Mr. J. Drew's prize not being won. Several prizes were booked for the members to fish for; after which some good harmony, with the toast of "Success to the Society," brought the evening to a close. A general meeting will take place on January 1, 1883, to arrange prizes.—J. Obbard, sec.

Dec. 16.

ROYAL PISCATORIALS.

At the headquarters of the above (Mr. T. S. Hughes's, the Foxley Arms, Foxley-road, North Brixton) there were exhibited on the 17th 23 handsome jack that turned the scale at about 112 lbs; the largest went 15 lb., caught by Mr. T. Hughes and friend. "It is the finest show that I have ever seen," remarked a well-known member of the Central Committee to me—and I quite believe him.—Pixie.

Dec. 18.

STANLEY ANGLERS' SOCIETY.

With two solitary exceptions, I am sorry to say, our register contains no record for the last week of any takes of fish by our members. The exceptions, however, in both instances, are very good, Mr. Wheatstone contributing 23 lb. 13 oz. of handsome jack, the largest scaling 8 lb. 15 oz.; Mr. W. R. Humby showing a handsome tray of roach, 33 fish, weighing 17 lb. 1 oz. It has been decided to hold the annual ball on Wednesday, February 14, 1883, when we trust to see all our old friends with us once more.

THE HAMMERSMITH UNITED ANGLING SOCIETY.

Some of our members competed on Sunday and Thursday in a match for a tripe supper, which took place last Thursday. Mr. Hobden took first prize with 3 lb. 3 oz. of roach and perch; Mr. Arnold, the second, with 1 lb. 7 oz. of roach and perch; and Mr. Walters, the third, with 1 lb. of roach. A capital supper was put on the table by host Green, which was fully appreciated. After the cloth was removed, the remainder of the evening was devoted to harmony. Mr. Choveaux played a pianoforte solo, for which he was deservedly applauded. Mr. Burgess then sang "As good as they make 'em," which was very well received. Mr. Gatwood followed with that fine song, "The Gallants of England" in his usual spirited manner. Mr. Reynolds then sang "In a Collar, a Belt, and a Pair of Boots." Mr. Maezy was cheered for his song, "Good Company." The most effective part of the programme was a duet, called "Music of the birds," by Messrs. Choveaux and Chapman. Our chairman then gave "Love's Request," and Mr. Chapman followed with "The Old Brigade." The secretary, Mr. Penny, sang "My Own, My Guiding Star." Mr. Maezy then sang "The Distant Shore," and Mr. Choveaux followed with "The Bedouin's Love Song" Mr. Bacchus gave a good rendering of "Old Simon the Cellarer." Mr. Gatwood was applauded for "The Storm Fiend." Mr. Burgess next gave "I've never done anything since," and Mr. Reynolds' "And so has Mrs. Johnson" was the last song of the evening.—Argus.

THE LITTLE INDEPENDENT ANGLING SOCIETY.

Our members were out last Sunday, and fished very successfully for a number of prizes, which were all taken. The successful members were as follows: Mr. Keene came first, with a fine show of jack and roach; Mr. Scott second, with jack and roach; Mr. Barr third, with jack; Mr. Letch fourth, with jack; Mr. Hopton fifth, with roach; Mr. H. Moore, sixth, with jack; Mr. Petrie seventh, with roach and dace; Mr. Townsend eighth, with perch and roach. Mr. Thompson had some roach and dace; Mr. Humphreys, roach. They also weighed-in.—W. H. Evans, secretary.

THE SOUTH EASTERN PISCATORIAL SOCIETY.

There was a good muster of members who met at the Prince Arthur, Stamford Street, S.E., on Wednesday last, and will meet every Wednesday and Sunday evening at 8.30. Several anglers were enrolled.

UNITED BROTHERS, DEPTFORD.

On Tuesday evening, December 12th, a No. 3 West Central Association visit was paid the above society at the Druid's Head Tavern, Broadway, Deptford. The chair was filled by Mr. Watts, faced in the vice by Mr. Tyler. The singing and the pianoforte accompaniment were all that could be wished for a Brother Bob. But I am very sorry to say the attendance was very small, possibly through the near approach of the Christmas holidays. The societies represented were the Bermondsey Brothers, South London, and City of London, and North Western. I hope we shall have a better muster next time. The following gentlemen contributed to the harmony of the evening:—Messrs. Allen, Brewood, Perkins, sen., P. Perkins, Freeman, Bonvoisin, Muggeridge, Watts, W. Tyler, Frost, H. Tyler, Currans, Ellis. Messrs. Bonvoisin and Field spoke a few words about the Great International Fisheries Exhibition, 1883, the Anglers' Benevolent Society, and several other subjects. I am glad to say the members have voted half a guinea to the Netting of Reservoirs Fund. Will forward the same shortly.—Roacher.

WALWORTH WALTONIANS.

Some of the members of this society have been having a nice time among the jack at Blunham this week. Mr. La Feuillade forwarded to the headquarters on Monday evening 12½lbs. of nice fish. Messrs. Bansback and Cain visited Windsor on Tuesday in hopes of getting among some of the jack that lie in the Clewer stream: they saw several playing about, and that was their share of the jack. However, they managed to get some plump roach. Broxbourne is the place appointed for the Boxing Day competition.

Dec. 20—Pixie.

The weaknessiz uv swells en' wurkin'-men—cigars en' wine—bakky en' beer—is metch about the sime. Doin' ez little ez possible, en' gittin' ez much ez possible, is pecooliar to bouth.—*The Kauknaigh Awlminek.*

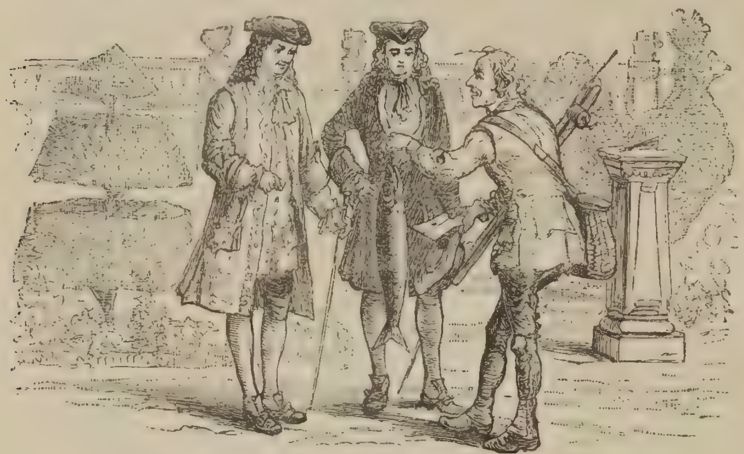
NOTICES OF BOOKS, &c.

SIR ROGER DE COVERLEY.*

Reimprinted from *The Spectator*. With 124 illustrations. By C. O. MURRAY. London: Sampson, Low, Marston and Co. Price 6s.

IF any of our readers wish to make an appropriate Christmas present or New Year's gift, they certainly cannot do better than select this delightful little volume. It contains no less than one hundred and twenty-four most charming woodcuts, which Mr. Murray has designed and Mr. Cooper has engraved in a spirit of true love and appreciation for their hero. Dear old Sir Roger is exhibited in all the quaint and humourous phases of his admirable character. There is also a frontispiece etching by Mr. Murray representing "Sir Roger and the Widow," beautifully executed.

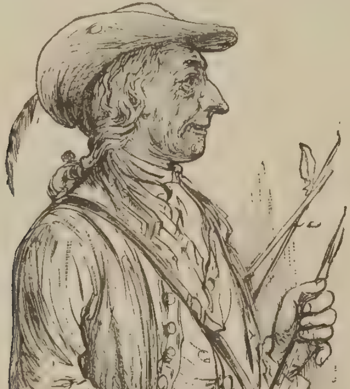
It is almost needless to say that this fine old country gentleman was a sportsman and an angler. "He has in his youthful days taken forty coveys of partridges in a season; and tired many a salmon with a line *consisting but of a single hair*." (Here at all events is an unmistakable triumph for hair!)



"A country-fellow brought him a huge fish."—P. 37.

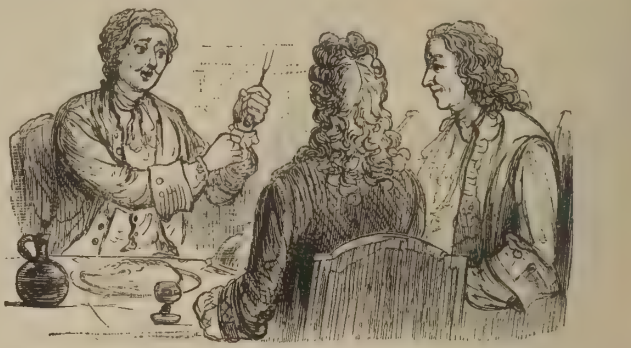
We have much pleasure in giving three of the illustrations, one representing the presentation to Sir Roger of "a huge fish," sent to him by his eccentric friend, "Mr. Will Wimble," "which he had caught that very morning." The fish was accompanied by a letter from Will, which is worth quoting: "Sir Roger,—I desire you to accept of a jack, which is the best I have caught this season. I intend to come and stay with you a week and see how the perch bite in the 'Black River.' I observed with some concern, the last time I saw you upon the bowling green, that your whip wanted a lash to it; I will bring half-a-dozen with me that I twisted last week, which I hope will serve you all the time you are in the country. I have not been out of the saddle for six days last past, having been at Eaton with Sir John's eldest son. He takes to his learning hugely.

"I am, Sir, your humble servant,
"WILL WIMBLE."



Will Wimble.

Accordingly Will paid his visit to Sir Roger, and "In the midst of his discourse the bell rung to dinner, where he had the pleasure of seeing the huge jack he had caught served up for the first dish in a most sumptuous manner. Upon our sitting down to it he gave us a long account how he had hooked it, played with it, foyled it, and at length drew it out upon the bank, with several other particulars that lasted all the first course.'



"Upon our sitting down to it he gave us a long account—how he had hooked it, played it, &c."—P. 41.

If any reader has not yet made the acquaintance of "Sir Roger de Coverley," this charming little book will introduce them to one of the most delightful characters in English literature. Those who already know the story will here find Sir Roger very daintily presented to them, and the best thing we can recommend them to do is to buy it for themselves or present it to their friends.

THE GARDEN ORACLE AND FLORICULTURAL YEAR BOOK.

By Shirley Hibberd, 4, Ave Maria Lane, London.

THIS is the twenty-fifth year since this useful guide first appeared. It now finds a place in most households where an interest is taken in the flower, fruit and vegetable garden.

PRESENTS FOR ALL SEASONS.

By W. Thornhill and Co., 144 and 145, New Bond Street, London.

THE above is the title of a most attractive little volume issued by Messrs. Thornhill. It is full of carefully-executed illustrations of the thousand and one things which are to be had at Messrs. T. and Co.'s establishment. In previous years we have referred to the sterling value and artistic merit of the articles manufactured by this firm. Among this season's novelties we notice some curiously modelled designs of fish forming the "New Fish Writing Suite." The inkstand is a patriarchal-looking old carp, the paper-weight represents a pike; but the candlestick is the *chef d'œuvre* of the set. Two chub form the stand of the candlestick; these fish are bolstering up an eel, which in a most graceful manner balances a candle-holder on the end of its snout.

The "New Crocodile Smoking Companion" is another capital novelty; the capacious inside of the reptile keeps your tobacco cool and moist and your cigars dry and safe. If you want the end taken off a cigar, the saurian will bite it off for you.

The "New Patent Tricycle Skate," for which Messrs. T. are sole agents, is having an immense sale; it was favourably noticed in the *Field* and other papers recently. It can be used on any ordinary floor, carpet, &c. The Telescopic Cup-cap Flask has only to be seen to be at once appreciated by sportsmen, and the same may be said for the Bent Beech Folding-Seat with cane bottom.

The New Hammered Bronze Flower-holders, Trays, Candlesticks, Inkstands, Paper-knives, &c., &c., are most elegant in design and attractive in appearance. But it would require a volume to do justice to the really beautiful things manufactured by Messrs. Thornhill. Their great success is undoubtedly due, in the first place, to the value and merit of the goods; and secondly, to the bold but judicious manner in which they are put before the public.

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

---

* Sir Roger de Coverley is one of the earliest and most interesting characters in the *Spectator*, to which publication Addison, the author of "Sir Roger," was the principal contributor. The *Spectator* was originally started in 1711 as "a censor of manners, a teacher of public taste, and an exponent of English feeling,"—and it contains a series of essays as brilliant as they are pure—truly "A well of English undefiled."

FLY-FISHING-SPINNING.—I.

"SAT CITO, SI SAT BENE."

"SOON enough, if good enough," *that* must be my motto. For my promise to write these articles has been so long pending, that they have attained quite an ancient history of their own.

As far back as the summer of '79 I read with great interest the articles on "Spinning for Trout with the Natural Minnow," which appeared in the pages of the FISHING GAZETTE from the pen of the late Mr. W. J. Bullock. (*Requiescat in pace.*) The writer, I at once perceived, was a master-spinner. On certain not unimportant points, however, his teachings differed somewhat widely from those of the Gamaliel at whose feet I had sat of old. I ventured to state those divergencies of doctrine—not intolerantly or intemperately, I hope—in a letter which I adresed to our Editor. He, always desirous of seeing any angling-subject

"Set in all lights by many minds,"

did me the honour of accepting my contribution, and of raising my letter to the rank of an article. Expansions followed on my part. And in the midst of it all I fell into correspondence with my old friend and piscatorial-instructor, John Ward, of —— in Staffordshire, whom I had lost sight of for some years. To my extreme surprise I learnt that he had, in the interval, totally changed his style of spinning. That put a sudden stop to my intended articles, then actually in type. The compositor's labour was all lost, to say nothing of mine and the printer's devil's. And I daresay some of the readers of the FISHING GAZETTE wondered how it was that the Editorial announcement of the forthcoming of those articles came to nothing.

In the autumn of the same year, on my holiday-journey to fish grayling with Mr. Bullock, at Eardisland, near Leominster, I went round into Staffordshire, and had ocular demonstration of my old trout-master's new style of spinning. "Seeing's believing." The moment I saw it I said: "Why, this is fly-fishing with the minnow, and grand fishing it is, too!" "Of course it is!" was his instant answer. But the brook he was showing off his new style on, was in high, thick flood, and, as an angling friend of mine would quaintly phrase it, was quite "unfishous." Our respective engagements precluded me from remaining to see more of the art on that occasion. But we arranged to meet at Corwen, on the Dee, at Whitsuntide of the next year; so that I might then become more deeply indoctrinated in the art and mystery of the new craft, and at the same time might see for myself the results of a little practice of it by an old hand. The guardian-angel of all true anglers kept watch and ward over our compact. And I, with what patience I might possess, awaited the advent of that time when, under such a teacher, I should be learning such an art,

"With deeper and with ever deeper love,
As the south-west that, blowing Bala lake,
Fills all the sacred Dee. So past the days."

The Thursday before Whitsunday '80 came, and I went down by the night-train to Corwen; and on alighting at the railway-station there the next morning, I found Ward duly in waiting. "It's a bad time," said he, "but we shall make some of 'em sit up soon." And very soon we did, or, rather, he did. I fished for a few hours on one day only, preferring to watch my master's finished performance, and not waste the water, already far too disturbed for him to make what, to his mind, would have been good fishing, by the whippings and the wadings of the usual host of holiday-anglers, never absent now from any trout-stream within this British Isle, in these latter days. What will it be by-and-by,

"Far off in summers which we shall not see,"

I wonder! Ah, well, never mind! Sufficient for the day is the evil thereof. And we shall be in the Happy Hunting Grounds then, I hope.

"Sport for the Immortals! Fishing!
Lies that inner voice which saith
(Is thought father'd by the wishing?)
We shall angle after death!"

But to return to terrestrial angling and its trials. Notwithstanding all those crosses, my companion caught enough during the few days we were at Corwen to "astonish the natives." For, in addition to all the flogging and splashing of the river, the weather was very unpropitious—no rain since Easter—very low, bright water, bitter north-east wind, and cloudless sky, each day, with a sharp frost every night. So surprised and so suspicious (I won't *say* so jealous) were the Dons of the Dee, that one day both the keepers lay in wait for us, pounced upon us just as Ward had commenced fishing, and insisted on inspecting our baits. His minnows had been caught that morning—*secundum artem*—by himself, in his small-meshed landing-net, and they passed muster, being alive. But mine, preserved in methylated spirits of wine, were, after many sniffings and mutterings, carried off—by French leave—to show to the chief magnate of the Corwen Angling Association, a large, local, landed-proprietor. In vain I protested that they were merely minnows,

"Only that, and nothing more."

"Ah, but what have you put them into?" said the gray-beard keeper, shaking his head more than ever gravely. He evidently didn't like the "*methylated*" odour. There was far too much *nous* in it for his nose. Obviously, we were the victims of a plot, a snare—and a delusion. Subsequently we found out we had been suspected of using salmon-roe, and uncanny oils and unguents, and I know not what other *piscatorial diablerie*. In the afternoon of the same day the junior keeper, upon whose younger brow "shame was ashamed to sit," rejoined us, and, knavely smiling, restored to me my minnows, remarking that, after investigation, the chief magnate had pronounced them to be only what he himself sometimes used in salmon-fishing, adding, that if that was all the indictment against us, the more sport we had the better he should be pleased.

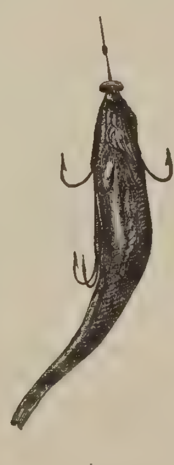
VIII



"Honi soit qui mal y pense!"

Eh! mine Editor? As we were dining in the coffee-room of the Owen Glendower, ere leaving Corwen, and were chatting over the events of our stay, a gentleman sitting at the same table informed us that he had just come from Bettws-y-Coed, where rumour (a little wide of the mark, as usual) ran that a couple of Cockneys had come down to Corwen, and were teaching the natives how to catch trout. I mention these incidents merely, in the interest of the art I am about to describe, to show that the execution done—*and certainly not by me*—was considered something out of the common. Indeed, the eyes of the host and hostess of the hotel—and their tongues, too—told that tale pretty truly every evening when the creel was emptied out and dished up to the experts aforesaid. In three days and a half Ward caught between 40 and 50 lb. of fish—and that at one of the worst of times. I may say, that on a former visit to Corwen, some eight years previously, he had in six short days, or parts of days, killed upwards of 300 trout, besides a salmon of about 12 lb., played out,* but lost by a bungler in the landing. One day during that visit, Ward was fishing near Llangollen; the keeper—another keeper—who was on the other side of the water, wanted to see his ticket. Wading across the river to show it, and fishing as he went, Ward hooked and lost a trout. The keeper laughed and chaffed. Continuing to fish his way steadily over, Ward hooked and landed five trout before he reached the keeper. Some swells who were looking on from a bank above, cheered him to the echo.

---

* On very fine-drawn gut and an all-hair winch-line, tapering down to six hairs.

On my return from Corwen I drafted out my views on the new style of spinning—they lie before me now. But on consideration I was not satisfied with them, feeling that I needed more than a little further practical experience before venturing to take upon myself the promulgation to the angling-world of the secrets of an art so high.

Mainly with the view of getting that practice, I, not then knowing of any better place within reach, went to reside on the Thames, at Taplow, during the summer of '80, coming up to my avocations in Town daily. Old Father Thames, however, offers very little temptation to practise spinning from his banks for trout, in the fly-fishing style. Soon I became introduced to another, to me, new art, and one more adapted to the time and place—whipping for chub with the baby-frog. Thenceforth all my spare time was devoted to that. It has this in common with fly-fishing-spinning, that the bait cast is much heavier than even a very large chub-fly, and is, in fact, about as heavy as a lightly-leaded minnow cast in the fly-fashion. Thus, in learning to whip out the frogling, I was happily acquiring (quite unconsciously) the knack of casting the minnow in fly-fishing-spinning, so far as acquiring command over the weight at the end of the line was concerned; but of the manipulation of a loose line, which is another specialty of fly-fishing-spinning, I at that time learnt nothing.

My autumn-holiday of '80 was passed in Ireland, at Killaloe—or, as some folks call it, *Kill-a-lot*—fishing salmon, trout, and pike on the Shannon and in Lough Derg. I don't say I killed a lot there. I did not. My daily average (in 16 days' fishing) was only between 14 and 15 lb. My heaviest day was but about 35 lb., and that but of pike. I got, however, a few good fish, viz:—

Six salmon and grilse	56 lb.
Three brown trout	8 "
Four pike	57 "

My largest salmon was 14 lb., and my largest pike 21 lb. On the last day of the then salmon-season, the 30th September, I had the good luck to catch a salmon of 14 lb., another of 12 lb, and a brown trout of 3 lb.—all on the fly, and all within about an hour.

On a former—my only other—angling-trip to Ireland I caught—with a certain amount of professional assistance—10 salmon and grilse in 11 days.

I state these facts, not out of any vanity (or I should certainly have advertised them in these columns long ago) but only in the hope of satisfying the reader that I am not quite without a general, as well as a particular title to write these articles. I do not pretend to set up for a professional angler; at the same time I should be very sorry to be set down as "but a blatant scribbler," and that to the injury of the art I have undertaken to describe. Indeed, but for my repeated promise, I assure the reader I should have been sorely tempted to shirk the undertaking. It is a labour of love, but rather a *hard labour*.

During the spring and summer of '81 I did not leave Town; and in the autumn of that year I devoted a short vacation to the *sulky* pike of Slapton Ley.

So when spring came round again, and

"All crystal-clear were the falling waters,"

I said to myself: "It's high time you began to practise that fly-fishing-spinning in earnest, devoting to it all your hours of idleness this next summer, if you ever mean to learn the trick, and make good use of it hereafter." And, in accordance with that decided opinion of the best authority, I quitted London, and went and squatted on the banks of the Colne, not very far from where Sir Humphrey Davy places the scene of "Trout-fishing" in his "Salmonia." I resided there from the middle of April to the end of August. I journeyed up to Town and down again daily, Sundays excepted, travelling, in all, during that period, as I have calculated, some 6200 miles, upwards of 900 of which I walked. One of my daily walks was to and from the country railway-station, along a canal-towpath, about 5½ miles both ways, ways of the stoniest. So I don't think that any one can truly say that I had not my subject seriously at heart. Do you? The length of trout-water I had the right of fishing was very, very limited. The trout, though *good*, were few and far between, and *almost* as shy as Sprint's little "*cusses*" in the Kent. For the water was a subscription-water, sadly over-fished and under-stocked. What with a day of business in Town, and four hours of journeyings up and down, besides all the other inevitable daily deductions, my time for practice was gone—like the gliding of a grayling—how quickly! even in the longest midsummer-days. And then *those cut weeds*! everlastingly coming down—as constantly as the current itself—now scattered broadcast, blade by blade, with the most provoking impartiality, over every square foot of the river—from top to bottom—fouling the minnow fatally at almost the very first instant of the cast—anon blocking up tumbling-bay, and weir, and mill-pool with their huge *bergs*, until the big boys and the hobbledehoys would be jumping from the bridge above, 10 or 12 feet down, upon the buoyant mass, as though it were their own flock-bed—*those cut weeds*—that Curse of the Colne—worse than "The Curse of Kehama"—worse than any mere "*cusses*" of midges, black, or brown, or gray, or yellow—*those cut weeds* were certainly not conducive to sport. Often I could hardly get a weedless water for an hour of an evening for a week together. Nevertheless, fishing hard for some time—till such time as I sickened and tired of it all, with all its hope deferred—I caught, not a good few, but a few good trout. No fish under 1 lb. was takeable. My six largest trout this summer weighed 20 lb., the largest of the lot was 6½ lb. And I got a fair share of practice—and of sharp practice, too—with those fresh-water sharks, those pikes and pickerels. Sometimes I was sheared off by them twice and thrice a day. Those attorneys and solicitors, those wretches and rascals of so many of our best trout-streams, I observe that Mr. Francis Francis has declared war *à l'outrance* against them, and not without an excellent *casus belli*. He has referred to their former ravages in the Hungerford water, on the Kennet. Why, I lost 5 or 6 trout-spinning-tackles bitten off by them there in one day. I thinned out a good few of them from the Colne, though.

In September now last past I went to finish my education on the Usk at Usk. I never made a worse mistake. For I found the river was a very early spring one for trout, all trouting worth a name being over and gone by the middle of May. The best of the trout-fishing is in March and April. They say—the natives say—that their river is then the first of trouting-waters, and ever has been so from King Arthur's days, when tilt-at-trout, no less than salmon-tournament, was often holden

"Up the vale of Usk,
By the flat meadow."

Thereat, no doubt, Tristram, the Hunter-Knight, would aye compete, and the Blameless King was wont to award the prize, which, I trow, was no eight-day clock, nor roll of oil-cloth, nor bottle of Day and Martin's blacking; but was—*rather*—some

"Robe of samite, mystic, wonderful,"

or magic rod, the work of Merlin, or, haply, even that carcanet of rubies, "the jewels of the Dead Innocence." I daresay it is so—and I durst not say it was not so—all just what they, the natives, say that it, their river, was and is. Still, for all that, I am quite free to confess that, even at the best of times, it is too large and strong a water at Usk for trout, to my thinking. What is that Latin line about the rarity of the union of Majesty with Love? How I forget! O, Mr. McKerrow! I shall have to come to your Usk Grammar-School, to get you to get me to get my classics up again. And what a getting upstairs that will be at this time o' life! But that yours is a grand salmon-river for those who, like you and me, do not mind deep wading, *for salmon*, in very strong streams, I readily grant. I was informed by the head-keeper, that more than *one thousand* salmon had been killed on the rod in the river—throughout its whole course—in three months, ending some time in September, and that one angler, Mr. Alfred Crawshaw, (who made his mark with the trout last March) had had some 200 salmon out of it this season. I saw one gentleman hook three salmon in less than three-quarters of an hour in one stream. I had fully intended having a few days' salmon-fishing—just to keep my hand in—when the trout-fishing, for which I had gone to Usk, proved worthless. But first the brightness of the weather, and afterwards a cold which (Usquebaugh notwithstanding) I caught, owing in part to repeated wettings, through wading in leaky fishing-stockings, prevented me from carrying out my intention. So I had only a single day's salmon-fishing. That, by the kindness of Mr. McK., and the liberality of the lady-owner, was, with him, on private water. But, a flood having run off, the fish were not kindly on that occasion. They would not be taught to rise, though the Schoolmaster waa abroad to teach them. A week or two before Major T. had "rugged" 12 salmon, killing 3, on that preserve in one day. But it was a lovely spot; and the good scenery made the *amende honorable* for the bad sport. The little hamlet of Ll—— lay nestling beneath the range of the Blorenge, which ran on until it was lost in the blue distance, away by the Sugar-Loaf-Mountain at Abergavenny. Under the hill rose the turreted church-tower, amid full foliage, and near it stood the newly-whitewashed—yes, the *newly-whitewashed* tenement of the Harper to H.R.H, the

Prince of Wales. A brother of mine, taking a sketch in oils of the view, had taken the liberty of leaving out the newly-white-washed tenement aforesaid, until he learnt the special appointment of its occupant. And even then he would insist on touching it in of a less staring tone—a more artistic tint. Of course I made him work in a (more or less silvery) salmon on the jump, with the ring on the water, and all that. Do you know, reader as learned as æsthetic, that there is only one word in the English language which rhymes with "orange," and none which rhymes with "month?" But there is a certain holy-book of the Hindoos called "grunth." Learning all this, a poet—perhaps the Laureate—inspired by the Muse, or most likely by all the Tuneful Nine, turned out this melodious verse

"All the way from Indus to the Blorenge
Came the Rajah in a month,
Sucking now and then an orange,
Conning by the way his grunth."

Neat, that? I read it years ago in a magazine-article. Now I can't quite say

"Coming events cast their shadows before,"

because, you see, I was no Rajah all the way from Indus to the Blorenge, nor was I sucking any orange, and most assuredly I was not conning *my* "grunth" on my way to Ll—— But we had some splendid peaches amid all the good things in the luncheon-basket sent down to us so liberally from *The House*. And their mellow numbers did undoubtedly—and not unmelodiously—melt in our mouths, more especially (if I mayn't say more espeachially) in my brother's, to whose lips *somehow*—I suppose, as to those of an artist, by some sort of *elective affinity*—came the bloomingest of the blooming lot, with the juiciest of consequences. He has an excellent eye for colour (for peach-colour, *par excel'ence*) has that A.R.A. After luncheon I bundled into the braw keeper's wading-breeches, and waddled off, and waded down the middle of one broad, short stream to the head of a deep pool, artistically fishing the stream on either side alternately—*usque ad finem**—as I went. It took me about a quarter of an hour to work my way back, sideways—*inch by inch*—about 20 or 30 yards only—from waist-deep to knee-deep, the stream all the while rushing up six inches or more, above its level, against my side. When I got out, and remarked to the keeper on the strength of the water, he coolly told me that if I had lost my footing I should never have got it again. At one time I was within 10 or 15 yards of 7 or 8 feet of water. The Major, who is not wanting in valour, and who carries a good deal more weight than I do, had, on a somewhat heavier water, exercised the better part of his valour, a sound discretion, in avoiding a wading of that stream. So said the keeper, adding, that he himself never cared to wade it much above his knees. Such, bold though gentle reader, is something like, or something not so very unlike, the sort of salmon-fishing to be had—with a 17 or 18-foot rod, and a 25 or 30 yard cast—at Usk on Usk. A good few fish were killed during my fortnight or so's stay there, several being over 20 lb. As a trout-stream, though, I much prefer the Dee at Corwen. I managed, however, to get a few trout, together with some useful practice, out of two little overwooded brooks in Monmouthshire and Somersetshire, during my holiday lately ended. On the very last afternoon on which I handled a rod this season, I caught three brace of trout, half-pounders, and ran as many more, in about 40 yards of water, which was virtually the only open, unbushed water I had to fish, so that I had to fish it over and over again, *ad nauseam*. "Well," I said to the miller's man on leaving, "I suppose that's better than some of 'em do?" "Yes, sir, *a d—— sight*!" he answered. I confess I had thought the fish were rather *a pretty sight*. But I suppose that was practically only his way of expressing the same opinion. With the run of the brook for a mile or two, and plenty of good baits—mine were few and bad—I think I might have had 10 or 12 lb. of trout that day, on a moderate computation, and that too at the end of September, when I should have scarcely caught a fish with the fly. The reader can judge from that latest incident of my experience of fly-fishing-spinning whether the art is likely to be *good enough* for him. He will in his judgment bear duly in mind that I was but a journeyman on the job.

A. R. I. E. L.

London, October 14th, 1882.

(*To be continued.*)

Worms in Dogs.—" Scalford, near Melton Mowbray, Jan. 7, 1871.—Keeping as I do so many valuable mastiffs, probably as many as any breeder in England, I have used 'Naldire's Powders,' and consider them an effectual, speedy, and safe remedy for dogs. M. B. Wynn." "Naldire's Powders" are also a splendid alterative, keeping dogs in excellent condition. Price 1s., 2s., 3s. 6d., and 5s., of all Chemists, and of Barclay and Sons, 95, Farringdon-Street, London.

A CHALLENGE FROM GERMANY.

In No. 50 of the "Deutsche Fischerei Zeitung," (Dec. 12, 1882), we notice an interesting article by Mr. Hermann Danner, on "Die Federschnur" (The Feather-line). Mr. D. is an enthusiastic fly-fisher, and in some old chronicle, describing how Georgius, Abbot of the Garsten Abbey at Steyr, and other noblemen, in the year 1572, issued certain laws for the regulation of their fisheries, found that "fishing with the ground line and feather-line" was permitted. For a long time Mr. D. could not find out what "feather-line" referred to, until one day, after grayling fishing in the Traun, he was chatting with some local anglers in a little inn, when one of them happened to ask an acquaintance if he had been fishing with the feather-line. "'What feather-line? Who has a feather-line?' I asked. 'That I can easily show you," said one of the company, and he pulled out of his pocket a coarsely-made stout hair line, with four artificial flies attached. The line was strong enough to haul a two or three pound fish clean out of the water, and the flies were wondrous works of art, dressed on No. 8 hooks; the lower part of the body consisted of black horse-hairs, and ribbed neatly with white, brown, and purple horse-hairs. The upper part was formed of peacock herl wound round, and the fly dressed buzz fashion. The improportionately big head was formed of dark red wool. The owner of this wonderful fly-cast said that from the oldest times there had always been a fisherman amongst them who occupied himself with the manufacture of these flies, which were sold at 60 kreutzers a-piece." Mr. D. considers that this evidence clearly proves what the "feather-line" is, and also that its use was known in Austria 310 years ago as "an ancient method of fishing." He goes on to say,—"And now let the English prove that fly-fishing was practised with them at an earlier date!"

Here is proof, friend Danner:—

In the year 1496, *i. e.* 386 years ago, and 76 years earlier than the time you mention, Winkin the Worde, printed at Westminster the second edition of the famous "Book of St, Albans," the reputed authoress being the beautiful Dame Juliana Barnes, or Berners, prioress of the Benedictine Nunnery of Sopwell, in Hertfordshire. This work, written in English by an English lady, not only gives instructions how to fish for salmon, trout, and grayling with the fly, but also describes a number of flies, viz:—

> "For March.—The dun-fly—the body of the donne woll and the wings of the partridge. A nother donne flye, the body of black woll: the wynges of the blackyst drake: and the jay under the wynge and under the tayle.
>
> "For April.—The stone flye—the body of blacke woll; yellow under the wynge, and under the tayle and the wynges of the drake. In the beginning of May a good fly, the body of roddy woll and lappid about wyth blacke sylke: the wynges of the drake and of the redde capons hakyll.
>
> "For May.—The yellow flye, the body of yellow woll: the wynges of the red cocke hakyll and of the drake lyttid yellow, &c.
>
> "For June.—The Donne Cutte; the body of blacke woll, a yellow lyshe after eyther syde: the wings of the bosarde bound on with barkyd hempe."

Then follow descriptions of other flies for June, July and August.

Here we have, then, a really excellent description of flies and how to make them, and we are told they are to be dressed neatly on small hooks on single hair. There is not the least doubt that all subsequent English writers on angling, including Walton, are indebted to Dame Berners for the groundwork of their descriptions of flies for the different months. Now, although this "Boke of St. Albans" is the earliest English work known which describes artificial flies and fly-fishing, it is perfectly certain that an art which was in such a state as to permit of its being so systematically described by a lady—was no new art invented by her, but must have been practised, perhaps centuries before her time. The winged imitations of living insects—such as the stone fly, for instance, described by Dame Berners as to be used on single hair, are centuries ahead of the clumsy flies in use 310 years ago in Austria, even supposing they were not superior to the clumsy bees described by Mr. Danner as in use at the present day on lines strong enough to pull out a trout of two or three pounds.

The Pollution of Rivers.—It is announced that among the exhibits at the forthcoming Great International Fisheries Exhibition will be the "processes for rendering streams polluted by sewage and chemical and other works innocuous to fish life." The directors of the Manufacturers and Millowners' Mutual Aid Association, of which Mr. W. Wentworth Fitzwilliam, M.P., is chairman, have secured a space at the Exhibition, and have invited all patentees, inventors, and workers of processes for preventing the pollution of rivers to show their processes, with a view to the demonstration of the assertion that there is a remedy for all cases of river pollution, and also that such remedies may be applied with advantage to the occupier of the premises. Inventors and patentees are invited to communicate with the Association at the office, 5, The Sanctuary, Westminster.

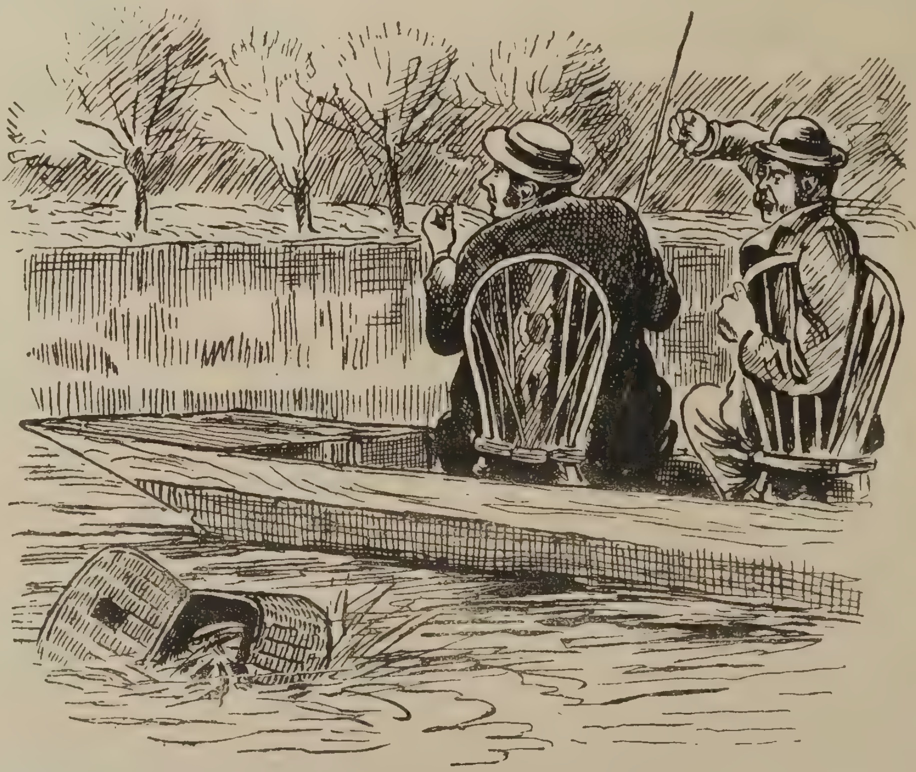
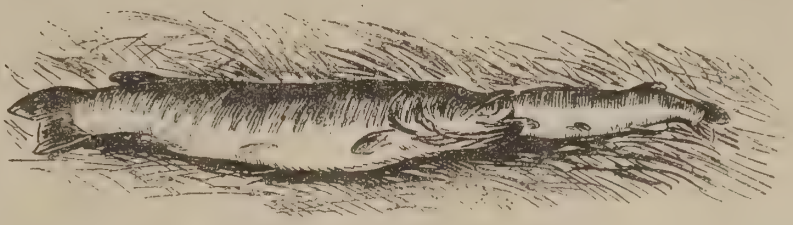
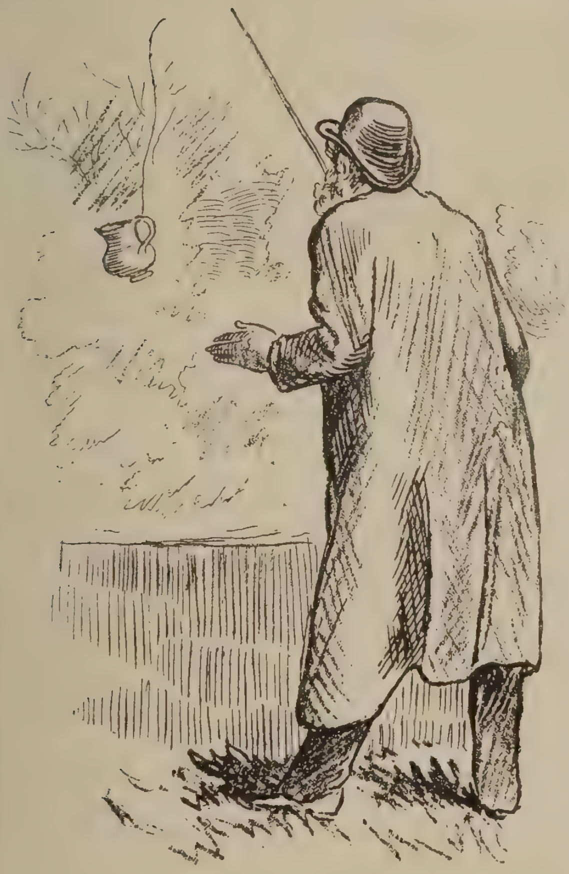
Perch-Fishing in the Thames.



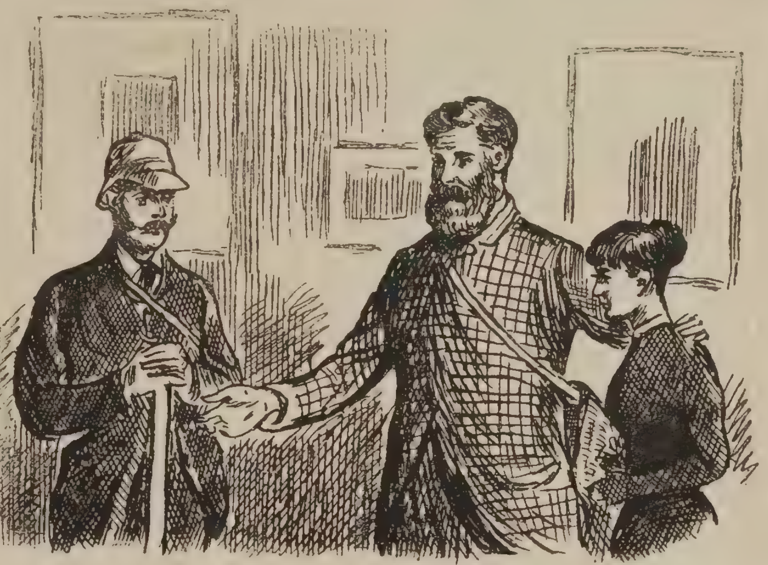
Two well-known members of the Piscatorial Society speaking in a fatherly way to a sculler who has dashed their hopes of the dace prize overboard.



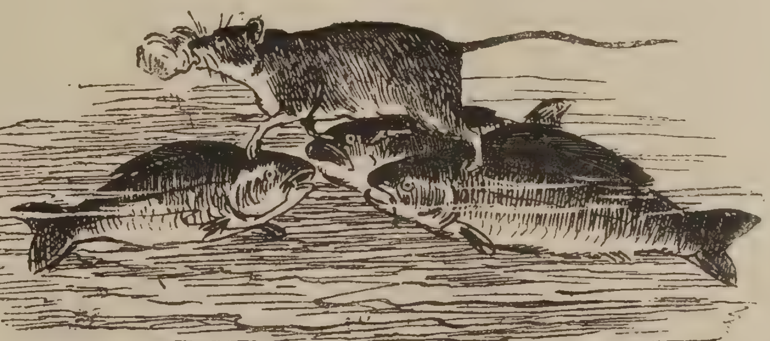
The Union Jack.
In death they were not divided.



"Biting! Yes, bites by the quart."



"If one had a daughter, one hardly could wish her
A fortune more blest than to marry a fisher."
—*Cotswold Isys.*



"While fishing in the park of the Prince of Hesse at Homburg, I threw a roll in the water to some carp, which tried to seize it; a rat swam out from the bank, scrambled over the backs of the fish, got the roll, and returned to the bank."—*Cotswold Isys, M.A.*

CHUB-FISHING IN THE THAMES.

"Look you here, sir, but you must stand very close, there lie upon the top of the water in this very hole twenty chubs."—*Izaak Walton.*

TWENTY chubs! Where are you to find that number nowadays—at least in the Thames—lying together? Steam launches, canoes, and picnic parties have intruded upon and disturbed the haunts of this the artfullest and wiliest of fishes. Picnic parties, oh! how I hate you; my chub-fishing soul rises in anger at the sight of you. Whenever I meet on the river, when I am out fishing, a boat laden with men, women and baskets, I know for certain that when I quietly sneak my boat round a certain corner under the lee of a particular island, where I happen to know there are a few fat old chub still left—yes, I know for a fact that there I shall find you—men, boats, women, dogs and baskets, all over the place; with all the big river at your disposal, you will go and pick out the only place where there is a chance for the poor fisherman—and for what?—to eat in, and to strew the bank with papers, that erst held foods and condiments, which I confess I often hope may have disagreed with you, and that you may not have found the apple pie improved by having the bottle of pickles spilt over it; and if the cork of the vinegar bottle that was packed close to that particular blanc-mange, which somebody so prided herself on, did not prove an exact fit. Well, I am not sorry, and that is the fact, uncharitable as it may sound. Having got rid of my grievance, I will endeavour to come to my point. I want to say something in favour of what I think is a slightly-understood and not sufficiently appreciated sport—fly-fishing for chub. There are many people as devotedly fond of fly-fishing as their more fortunate friends, but who cannot afford to pay for that expensive luxury, trout fishing, and who, perhaps, have not the time at their disposal to be constantly running down into Hampshire or elsewhere, even supposing they could belong to a "water"; and it is to those persons that I address myself, in order to show them how, at a very small cost, they may get health, exercise, and good sport. Of course, chub fishing is not what it used to be ten or fifteen years ago; but even now very good sport may be obtained if the angler only set about it in earnest. I don't know why the poor old chub should be such a maligned fish. "Leather-mouthed," "logger-headed," &c., &c.—perhaps he is all this; but at any rate he takes a deal of catching, and if you can circumvent an artful old four-pounder, who always arranges his habitation so that you can't get a fly to him from behind, and there is a bush which prevents you throwing across stream to him, and it is all bare in front of him, so that you cannot get nearer than thirty yards without his seeing you, which, if he does, he will instantly apprise you of the fact by silently disappearing—I say, if you can outwit that fish, even though he be "leather-mouthed," you will admit you have had some fun and sport, by which latter word I mean you have had to put out all your skill and knowledge against the creature's natural shyness and craft. Charles Kingsley pays the chub a compliment on his artfulness in that delightful little book of his called, I think, "Chalkstone Sketches," or "Studies"; and old "Izaak" speaks of him as the "fearfullest of fishes," who will "sink down if but a bird flies over him, and makes the least shadow on the water." In chub-fishing from a boat there is another advantage: it is a companionable sport, and there is just as much fun and skill in managing the boat properly as there is in hooking the fish. The boat I use is what is broadly known as a "gunning" punt. Mine I had built for me, as I wished a few little alterations and improvements made; but you can hire them at many places up the river. Perhaps a few particulars of this boat may not be without interest, as, besides ordinary work in the daytime, I always sleep in her at night. Flat-bottomed, with a pointed nose and stem very nearly so, 24 ft. overall, upright sides, or nearly, with about 3 in. of decking round the edge of a small coaming, a well in the centre so arranged with a plug as to be used dry, and a locker forward and aft. The lockers are made so that they can be used (as a rule, you can very rarely get anything into the ordinary locker, and once in you can never get it out again); the fire-locker has no door at all; it really is only decked over, so that you can with perfect ease get at anything that is stowed there, and the after-locker has an opening of about 2 ft. by 18 in. at the top, and is covered with a hatch. The advantage of this is that you can put larger things into it and pack it more perfectly than you can the usual locker, which has generally a small door opening on to the floor of the boat, allowing all the end of it to be wasted, and causing dislocation of the back in any attempt to make use of it. Round the inside, under the gunwale, runs a ledge, so that there is never occasion to put odd trifles that one may be using on the floor of the boat, or in the thwart, when done with. Gorge hooks and boxes of fusees are both very useful things, but the former put down hastily on a thwart and forgotten is apt to remind oneself of its existence unpleasantly, and the latter dropped among some fishing tackle, or mixed up in a landing-net, and then stepped upon may cause considerable damage. On opposite sides, near the well, are two small lockers, which are handy for stowing knives and forks and plates (tin), and on the other sides of the well two rows of half-a-dozen hooks, which are very convenient for corkscrew, keys, watch, &c., &c. With regard to the sleeping arrangements, there is ample space for two people, one fore and the other aft of the well; the thwart, of course, is made to easily unship. The supports of the awning are made of bent timber, built at a regular shaft-bender's establishment—the same, in fact, only lighter in make, that are used to hold up the tarpaulin of a cart or van; there are four of these. When wanted for use, the ends are slipped into holes cut through the little piece of decking, and rested on a small block fastened to the inside of the boat; the ridge rope is made of brass wire, each hoop or support having two wires fastened to either side at its top, which are then hooked on to the wires of the next hoop, and when all are up and fastened together, the end at the bow is hooked on to a ring at the extreme end of the boat, and the end at the stern is fastened by a stout cord to another ring, the object of the cord being to pull everything taut, and also to slack off a bit with when the awning gets wet in rain. The awning itself is made of the common thin unbleached calico, about tenpence a yard. Thick material, besides being cumbersome, lets the wet through and takes a long time to dry; but the thin stuff tightens up directly rain falls upon it, and beyond shrinking a little, is no trouble whatever, and never lets a drop of wet through. On a wet day it becomes a trifle warm inside, but all things considered, that is not much to grumble at. The year before last I tested this awning to see what it would stand in the way of rain. I was sleeping ashore at the time. It came on to rain pretty hard (it was towards the end of the autumn), and as I did not want the boat to get wet inside I put up the tent, and after forty-eight hours' continuous rain the boat was as dry inside as the proverbial "lime-burner's clog." On the outside of the awning are put at intervals large stay hooks, which fasten on to a line run through eye-bolts let into the outside of the boat just under the edge of the gunwale; this is slacked off a bit when putting up the canvas, and when all the hooks have the line through them it is pulled taut fore and aft, and then you have a firm, sound and dry shelter, five feet, or a little more, high, which, when you are lounging luxuriously on your blankets, with your back against the side of the boat, looks, as you gaze dreamily up towards the lamp hanging to the centre support, like a little palace. Why people should take the trouble to go "camping out" on shore in large tents, with tent-pegs to be driven in, everything to be handed out of the boat, wood to be procured for fire, mackintoshes to be laid down to sleep on, water to be kept out of the tent if it comes on to rain, and all the other inconveniences of crawling creatures investigating you in the night and cows walking about among your tent-ropes—why people should do all this, when, for almost a few shillings, they can get a snug, dry roof over their heads, with all their goods close handy to them, is a mystery to me. I once timed the rigging-up of my awning, and, from the time of opening the after locker to get the tent out, what with fixing the supports, &c., down to making everything fast and ship-shape, the time occupied was two minutes and a quarter. A few other little particulars, and I have done. I keep the food in the well, and use the top of it as a dining-table. I use a spirit-lamp to boil the water for the tea, and I find that tinned meats, &c., with country bread and butter and jam, make as good a dinner as a sportsman need wish for, particularly as everything tastes so very nice after a hard day's fishing and rowing; and the only difficulty is to keep your eyes open till nine o'clock, at which time you are glad to turn in amongst your comfortable rugs, and never move till six o'clock the next morning. You will think I have strayed a long way from my chub-fishing, but as it is only satisfactorily to be accomplished by means of a boat, and you *must* live in your boat in the upper Thames, perhaps this somewhat vague description of a really serviceable craft may not be so much beside the question. In consequence of the river being so much disturbed by boats, you can only drop on the chub in the lower part of the Thames now by going after them very early in the morning, and if you are sleeping out you are on the spot, and may often have an hour or two's very good sport before people have begun to move about. As to where to go, I think Abingdon makes as good a centre as any I know. It is only eight miles to Oxford, and from there up to the top of the navigable river at Cricklade you can take your fill of "chevins," and the fish in these upper waters are much more unsophisticated than their brethren lower down; and though I never took any quite so large there as I have done below, still you can get a good many three-and-a-half pound fish, with an occasional elder brother of a pound heavier. Supposing you do not care about living in your boat, I know no place that will yield so much sport as the above-mentioned town—that is to say, four miles above and below. Appleford Reach, below, used to be a famous place, but is not so good now, I think. A few years ago, with one rod, we got fourteen fish, averaging three pounds each, in an afternoon; and as the poor people are always glad of them for food, it does not come under the head of "ruthless slaughter." There used to be a good many fish below Culham, or rather below Sutton Courtney Mill, but lately they seem to have deserted this place. Above Abingdon, up to the Lock, there are some fish, and good ones too, on the left as you go up; after that, except one or two places which have to be accurately known, there is nothing much till you get above the rustic bridge at the Island, about two miles up, but from there right up to Sandford Mill there are any quantity of big fish. A year or two ago, among eleven fish (besides those turned in under a pound), I had one of 5 lb. and all the rest between 3 lb. and $3\frac{3}{4}$ lb.; and if a man cannot afford to pay half a guinea a yard for trout-fishing, which I believe is about the price now, I say, go and catch big chub with a single-handed rod.

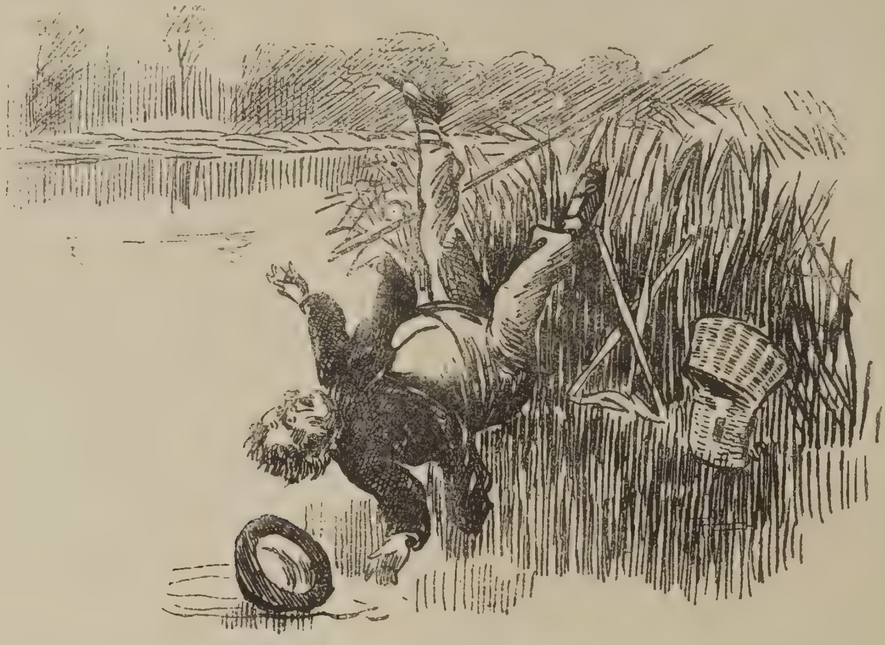
People who go after chub in the winter with "pith" or "brains" and other nastinesses do not know the sport of getting the fish on a fly rod in the summer, as they generally use stouter weapons, and, besides, the great enemy to the fly-fisher is in their case absent, viz., the weeds, which in the winter are all rotten and gone; they cannot imagine the feelings of the fly-fisher who has hooked a 4-pounder, and who sees him steadily working into a bed of weeds, knowing that once into this sanctuary his fish will be gone, for it is really marvellous what chub can do in the way of getting rid of the hook once they succeed in "weeding."

I have heard it asserted that, once into their favourite shelter, they run the line round some extra tough piece of weed, and then turn round and pick the hook out with their tails, but this I can't vouch for, never having witnessed the operation; but, really, I can believe almost anything of a chub. I know a piece of water near London, a bit of the Colne, in fact, where, under a large willow tree that overhangs the river, you can see "twenty chub," aye, thirty, sometimes; but do you think those fish will take a fly? Not a bit of it, they have picked out the only place in the river where you can't approach them without showing yourself, and there they lie and waggle their tails; and though no one goes into the field to disturb them, you may go down, and picking out the biggest blade of grass you can find to hide behind, you may throw the fly on to their noses, and they only go away in a sad and bored sort of way, as much as to say:—"Oh! here's that fellow with his yellow-bodied fly again; he's been throwing a black and silver thing at us lately; but what's the good of that when we can see the top of his head sticking up there between those two rushes?" A curious thing about these fish is that they always pick out a place to live in, they don't live anywhere about, like many other fish; you soon know where they are to be found, or if not, be found where they ought to be. You will find them under one bush, and not under another, though the places may not be a dozen yards apart, some set of the stream, some alteration of the nature of the bottom, determining their choice no doubt; but it is a fact that there are many parts of the Thames where you may go down the stream past a bank with bushes on it, apparently all alike, and you may say from your previous experience, "There are chub under that bush, but the next two are no good, and occasionally there is a fish under that little one yonder." I saw this exemplified once at Goring, where I was staying some time since. I had done very little with the chub, though I was not after them all the time, having something else to occupy me in the middle of the day. I only fished morning and late afternoon and evening. In one part of the stream—the main river, too—under some drift that had collected against a fallen tree, I discovered a real old "father" chub. I had always thought there must be a fish in that place, and at last I found him, and got hold of him, and after a good fight he was presently lying on the floor of the boat; 5½ lb. he weighed, and very magnificent he looked, being in the pink of condition. When we got back in the evening to the landing-place there were, as usual, two or three village children sent down by their mothers waiting for my catch. Close by was a somewhat gorgeous person standing near an equally gorgeous new boat talking to his boatman. When this fish, with three others not so big, but all good ones, was handed out on the shore, the very magnificent person came up, and, addressing me in a loud and rather arrogant manner, wished to be informed if I had caught this particular fish myself, and what I had caught it with. I had got out of the boat and had stuck my rod in the ground, and was quietly filling my pipe, when he spoke to me, and not liking either the looks of him or his manner, I replied quietly that I *had* caught the fish myself, and that the fly was on my rod, where he could examine it for himself. My rod had not any silver-mounting to it like his own, which I could see in his boat, and was, moreover, rather dingy from the effects of some six weeks' constant exposure to a blazing sun, besides being knocked about a good deal in the boat. I saw him look with a half sneer at my poor "stick," and when he saw the fly—a good large "Alder"—he said something about my catching a fish with "that thing," and "Pray, where do you get these fine fish? I've tried everywhere and I can't catch them, and I've got plenty of flies." I said perhaps he didn't go to the right places, and then civilly wishing him "good evening," started off up the village to dinner. The next morning we started to go down the river as usual. I had forgotten all about my swell friend of the night before, and we proceeded to make our morning calls at certain bushes and other places where we knew there were fish. Presently my friend, who was sculling, called out, "I say, there's that swaggering fellow of last night following us," and there he was certainly, standing up in his boat—a punt—dressed in the most splendid of knickerbockers and stockings, flailing away with a big rod, and his man standing up as well, flourishing a punt pole. They were stopping and fishing every place they saw us try, so we thought we would give him a little dance, as we did not want him going to all our pet places and disturbing them. Instead of fishing our usual spots, we went carefully down the river and fished every bit of bank, bush, and tree that we knew did *not* hold a solitary fish, our friend following us about three "places" in the rear. Of course we did not get any fish, and of course he did not neither, and we had the intense pleasure for two mornings after of seeing him hard at work fishing these unprofitable places; we fished our usual corners when he was not about, and the next time we met him at the landing-stage he was packing up his traps and using bad language, which didn't seem to improve when our usual four or five fat chub were pitched out on to the shore. This was in August, a very hot August too, when the fish had to be rather artfully stalked, and when if the first cast was not exactly in the right place—accurately dropped between those two pieces of weed, between which Mr. Chub was lying—it was all up, for he either saw you or else the disturbance of the fly and line sent him off. I know you can get fish sometimes by rough work, with a big fly and a long line, but there is not half the fun in it compared to quietly stalking them on a hot day, when you have to be as quiet as a housebreaker, and as much out of sight as possible. Your sensations are not to be described as you smoothly work the boat round that rush-bed to that little run at the end of it, where there is about a foot of water below it and the bank, and where you know there is a wise old chub who, the instant he sees you, will disappear. If you can get the fly on to his nose before you have attracted his attention, there is a swirl in the water, and then a considerable row. Very often, too, he will jump like a trout, and before now I have had to go and fetch a fish out of a tree, he having got himself fixed in the roots or lower branches. I remember one particular fish doing this with me. It was at the back of Queen's Eyot, below Bray. He was not a very big fish either—about two pounds and a-half—but directly he was hooked he made a rush for his home, under a very snaggy tree, and, when there, he gave a mighty leap, not liking the strain that was on him very likely, for I held him as hard as I could, though without succeeding in stopping his first rush. When he jumped, he managed, somehow or other, to go up on one side of a snag, and, striking it as he fell, he toppled over on the other side among a lot of drift and dried branches, and being half supported by the line over the branch, he stuck fast; so I had only to take the boat up to the bank and quietly pick him out of the tree in rather an ignominious fashion. That was the very best day's chub-fishing I ever had in the Thames. Forty-four fish; a few "pounders," but most of them between two pounds and three pounds and a-half, besides one "grandfather," four pounds and three-quarters. They were all caught with one fly, a thinly-dressed, yellow-bodied hackle—very little hackle, and that red—and a medium-sized hook. But, alas!—"ils ont changé tout cela"—the poor old chub is driven to hide himself in deep holes, and places where he is quite inaccessible—at least, that is the case in the lower waters. It makes me sad to visit some of these old haunts now. Old fallen trees and other obstructions that made runs and harbour for the fish, and where you were pretty nearly sure to see something more, are gone, many of them, thanks to that senseless body, "The Thames Conservancy." Of course the fish have gone too; and if it is not too disrespectful, I should like to express a wish that the conservators would follow the "other obstructions." They are rapidly succeeding in knocking all the picturesqueness out of the river, and making it to suit their notion of beauty. This is a kind of level-banked, even canal, and chub don't like canals; they are fond of queer, tumble-down, out-of-the-way places, and that is one of the reasons why I love him—we have something in common. In conclusion, let me say, if you are not overburdened with this world's goods, and want some fresh air, and plenty of exercise, and you prefer fly-fishing to any other form of angling, take the river at Oxford, and go up. You will find hardly anyone there, as there are no inns to speak of, no launches to bother you, and no picnic parties; and if you don't mind roughing it a little, you will get a fair amount of sport, and will, I think, be inclined to agree with me that if you cannot get trout-fishing, you may do worse than spend a week or ten days on the Thames "Chubbing."

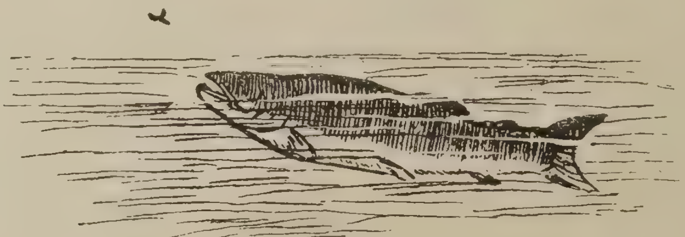
Wanderer.

EXE SALMON FISHERY.

A statutory meeting of the Board of Conservators for the Exe Salmon Fishery District was held at the Castle of Exeter on Friday, December 8th, to ascertain and declare the amount of licence duties paid in respect of licences for fishing otherwise than with rod and line, and the number of representative members for the ensuing year, and also to receive a report from the Weirs Committee of what had been done in the matter of Mr. Daniel's offer. Sir J. Duntze, Bart., presided, and there were also present Sir J. T. B. Duckworth, Bart., General Drewe, General Timbrill, Major Wyatt-Edgell, Captain Waldy, Captain Marder, Rev. P. Coleridge, Rev. G. S. Jellicoe, and Messrs. T. C. Daniel, Wippell, and W. J. Richards. The clerk reported that the total number of net licences taken out during the year was 22, against 26 last year, and the amount received for the licences was £77. The number of rod licences issued was 81. The value of net licences gave the licensees two representative members, and the chairman signed a declaration to that effect. The Rev. G. S. Jellicoe observed that the fish were going back to the sea very much earlier this year than he ever remembered. From his neighbourhood—Dulverton, near Lord Carnarvon's place—15 fish had gone back, of which he had marked seven. He had marked the fish simply as a matter of interest, and he was sure he could go on marking up to at least 100. He placed the number and date and weight of the fish on the label, and the fish would be interesting when they were caught. A matter which Mr. Collins thought very necessary was the provision of gratings to prevent the fish from going down numerous small side-streams. These streams gave great facilities for poaching, and with all their trouble and pains they could not put a stop to the practice. Farmers objected to the gratings because, they said, they stopped the water from flowing over to irrigate the land, but he thought that if the gratings were only used between November and the end of January, and taken away in the summer, that would meet the difficulty, and would certainly preserve a great many breeding-fish. A great deal of destruction of fish was further caused every year by the mills, and as they were mostly young fish, it would be well if they did something to prevent the slaughter of fish that would be so useful for next year. Poaching was carried on extensively at Withypool, and fish were taken in spite of the keeper. Fish were taken there as early as May this year, and that fact gave an idea of how early they came up. The head and tail of the fish caught in May were hung up outside the publichouse door to show the keeper that it was possible to take them while he was not there. With regard to the number of fish in the upper waters, he saw seven salmon together at one spot, and trout were helping themselves to the spawn. The fact of seven fish being seen at one place showed what a great number there must be in the river, and the value of the upper waters was very great, therefore keepers were most essential. There was a doubt as to the exact character of a cross-bred fish in his locality, and as a gentleman in London had offered to diagnose some specimens, he doubted not that the Board would sanction the catching a few for that purpose. Generally speaking, no opposition was offered by the farmers to the keepers going through their meadows to search those little mill-streams, and they took care to show them that they would not commit any damage. The chairman suggested the appointment of a committee to consider the matters referred to, and to report to the Board, consisting of the Rev. G. S. Jellicoe and Messrs. Collins and Daniel, and the proposition was adopted.



Which side up? This picture has a natural appearance from whichever side you regard it



Out of season!

The Chairman said there was no doubt that they ought to begin to construct passes at Salmon Pool and gradually go up the river. If, however, they attempted to lower the water they would get the mill-owners against them. It was thought advisable to make the whole of the passes recommended, if practicable, and it was stated that in addition to Mr. Daniel's offer of £100, a sum of about £200 had been subscribed, leaving only about £105 to be obtained to complete the work. Mr. Daniel suggested that they should first make the two passes recommended at Salmon Pool and see how they would answer. If they were satisfactory they could do the remainder. After some discussion, on the suggestion of General Drewe, the Chairman consented to write to the mill-owners at Salmon Pool to inquire if they had any objection to the construction of two passes on that weir. The 18th of January was fixed for the next meeting.—From the *Tiverton Gazette*, Dec. 12, in which a full report of this interesting meeting will be found.

A LADY HANDLES A BIG BLACK BASS.

JUST previous to writing you from Traverse City, Michigan, I had received a post-card from some warm-hearted friends who were camping near Traverse Bay, telling me they were having a grand time fishing. I had occasion to write them, and. in closing, said:—"Kind regards to Mrs. ——. I hope she will have a good time fishing; and I think she will come out of camp high hook, for the bass can never resist her bewitching eyes. She is sure to get the biggest bass in the crowd, and they'll come and bite on purpose to come in out of the wet"

I saw them five weeks after, and found the joke had indeed become a fact. With eyes sparkling with animation, and the words fairly leaping from her lips, in answer to the greeting and inquiries as to the enjoyment of the trip: "Why, Mr. T., would you believe it, I beat them all? I caught the biggest bass of the whole party—handled him all alone; but, 'pon my word, I thought he was going to pull me into the lake. You must be a prophet or are endowed with second sight."

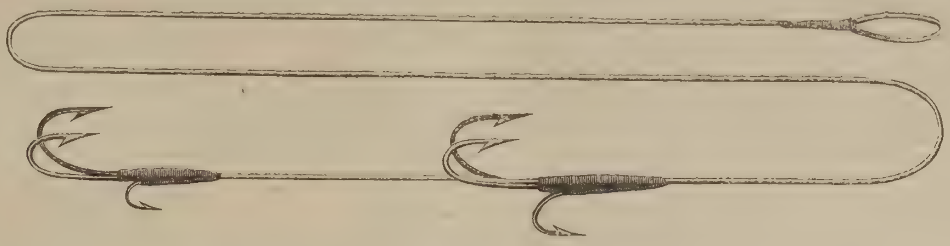
A little questioning, and I found they were out boating, and the lady had a line out trolling, rowing quite slowly, when she screamed, woman-like: "Ah! I've got something!" And, as the tugs came sharp and strong, her line gave out pretty lively. Recovering her presence of mind, she hung to the line, though he was pulling fiercely. Out of the water he came, throwing a somersault in the air, splurging and splashing on the surface, all the time trying to rid himself of the hook fastened in his jaw. Away he went down into deep water, and camp up again panting. She drew him near to the boat, when one of the men quietly slipped him on board. Was there fun in the water—it redoubled now. No log of wood was he, but game to the backbone. He sprang up almost into the lady's lap as she sat in the boat. "Et-u-brute!" There was such a scrambling around that they came within a trifle of getting dumped into the lake. Finally, a blow on the head stunned him, and he was at once killed, and weighed 4¾ lb.

Think of it, ye who fear the introduction of black bass into your waters. What prime sport for an afternoon's fishing such a fish would be. You would go home satisfied. Though years since I fished in your gentle streams, yet we can assure you that your primest jack, or pickerel, are as a stick of wood when playing them in comparison with these bronzed-backed armed warriors of our fresh-water seas and streams.

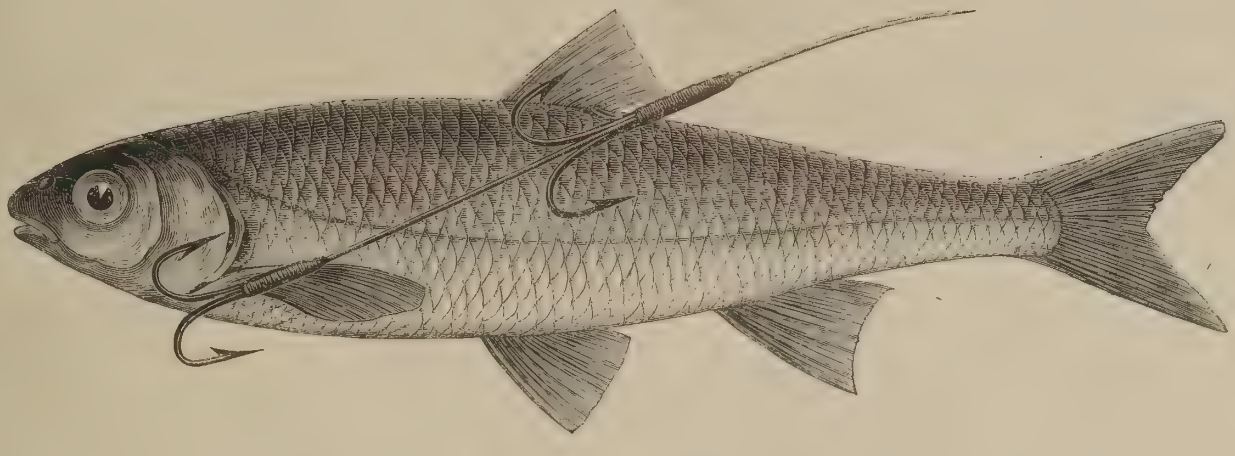
The party enjoyed their camping trip so much, they intend going again next summer.

Chicago, U.S. W. David Tomlim.

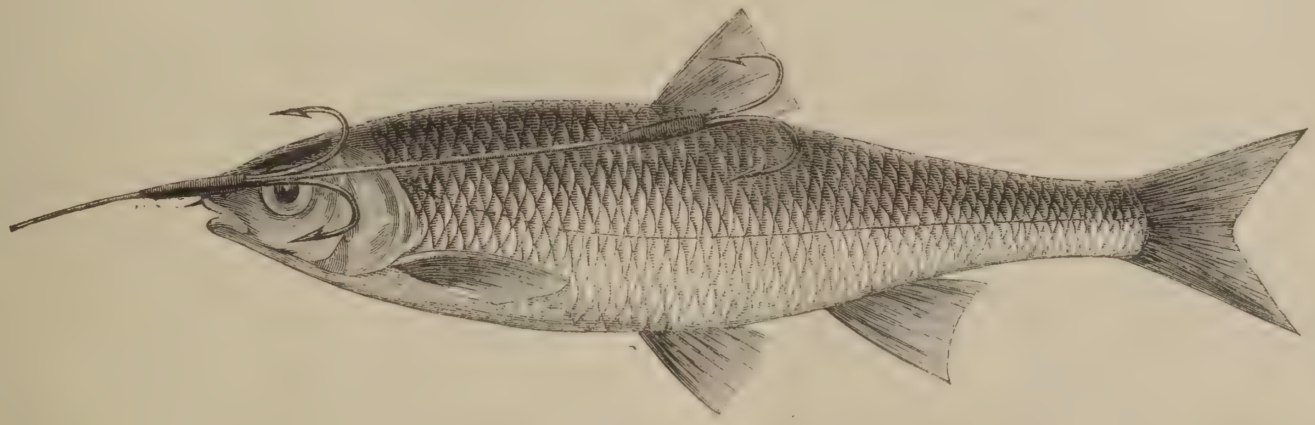
The Great Eastern Railway and the Christmas Holidays.—The Great Eastern Railway Company announce that to prevent crowding at the booking offices of the stations, tickets, dated in advance, will be issued at the stations, the usual parcel offices in the different parts of London, and at the offices of the principal tourist and excursion agents. Special trains "for parcels only," will also be run for the purpose of carrying Christmas presents, and extra facilities will be organised for the prompt delivery of such parcels.



Mr. Jardine's Perfected Snap Tackle for Pike Fishing.



Live Bait Snap.



Paternoster Snap.

THE PERFECTED "JARDINE SNAP" FOR PIKE FISHING.

THE dorsal-triangle has a large rider-hook, which is to be put through the base of back fin, thus obtaining a firm hold on the live bait. The small rider-hook on the end triangle is to go into the base or joint of pectoral fin, thus lying close to the bait, but without injuring it.

I have my snaps made in three sizes, so as to suit bait of various lengths, and on copper gimp, because it is not so showy in the water as brass or silver.

This tackle can also be used for "snap paternostering" (a very killing method) by putting the large dorsal rider-hook through the lips of live-bait, and the small pectoral rider-hook through the back fin, as illustrated in models herewith.

If preferred, the dorsal triangle can be made to slide up and down the gimp, like the lip-hook of a Thames spinning flight, but bound to the gimp is a neater method. This tackle can be obtained of Messrs. Carter and Sons, St. John's Street Road, who have some capital copper gimp in stock; also of Messrs. Gillett and other fishing-tackle makers.

A. G. J.

THE PISCATORIAL SOCIETY.

THERE was a good muster of members and visitors at the ordinary weekly meeting in the club room, Astley's Hotel, Covent Garden, on Monday evening—Mr. Thomas Ransom Sachs was voted into the chair. Mr. J. Ross Faulkner weighed in a beautiful dace of 14½ oz. from Thorney Broad; Mr. G. Robinson registered two chub weighing 7lb. 7oz., the largest 4lb. 15oz. from the Thames, and fourteen pike from private waters weighing 80lb.; Mr. Thomas Huggett showed two perch from Henley weighing 3lb. 2oz., the largest 2lb 1oz. The silver cup of the value of ten guineas offered this season for the greatest number of specimen fish according to club prize rule, is causing great emulation amongst the members, several of whom have registered three and four each, and it is anticipated the report at the annual dinner will show that the members generally have been very successful during the year in their fishing ventures. The annual meeting is fixed to take place on Monday, the 8th of January, 1883. The claims of the Thames Angling Preservation Society in reference to the netting expenses, was brought before the meeting, and resulted in three guineas being unanimously voted by the meeting, in addition to the annual subscription of three gunineas given by the society.

YENG men, down't smouke. It's wickid. It's un'elthy. It's sinful. Send yaw cigars ter me en' let me burn 'em up. Swear auf en' reform afore it's too layte.—*The Kaukneigh Awlminek.*

RIVER REPORTS.

MID-THAMES.

In consequence of an unlooked-for accession of snow and ice-water to Mid-Thames, the river during the past week has risen in height some six inches, and become the colour of between a green shutter and a dirty door mat. Men have come and men have gone—the river has pursued the snow broth even tenor of its way, but no fish have rewarded the patient, and weather or no defying piscators. At Medmenham, Mr. Sturges, out with Bob Young, has been indefatigable without a result worth recording, and Messrs. Davis and Hawton in the same waters yesterday only secured two dozen white livered looking roach, and lost a monster pike on a gut paternoster. At Henley some fair baskets of roach were obtained on Sunday by visitors to "Ye Bell," and at Marlow I hear Rockwell has been the death of a big pike—by hearsay, about the size and weight of a turnpike. My other items from Bourne End, Cookham, and Bray are not worth ink. Thursday evening, 6'clock. The river is toning down to a better colour, and the snow broth, being rapidly sucked away by the capacious mouth of Father Thames, so I am thinking, after all, good sport may yet accrue to Christmas holiday folks, and that such may be the case, and that a happy and prosperous new year is in store for all angling confreres and gentle readers of the Fishing Gazette, is the sincere wish of—Marlow Buzz.

Ancholme District.

Owing to the melting of the snow the river has recently been in a high state of flood. This has not merely put a temporary stoppage to the angling, but also flooded the gas works of Brigg to such an extent that no gas could be supplied to the inhabitants, and the town has been in a state of darkness. The last inconvenience has been remedied, and as the waters are beginning to run well down again, it is hoped that angling operations will soon be again in full swing, and that many of the fine pike with which the water abounds will make their last run.—Thomas Ford.

Chichester.

Sunshine and showers have usurped the reign of King Frost the past week, but preparation for the festive season has kept rodsters otherwise employed, but few trying their luck at the water side, small jack have been taken, also some good roach. Mr. Rodgers took first prize in the weekly competition with roach. The competitions are now varied; pike and perch, and perch, roach or bream, being fished for in alternate weeks, to give all anglers a chance. "Old Joe," the bargee, took a nice pike of 6 lb. in the basin yesterday. Well, what shall I call it—trimmering? "I got on his eel line," says Joe, "'twasn't live baiting, cos the bait was nearly dead." Esox Lucius was lugged out neck and crop and sold with a pound eel for eighteenpence. It is a pity more legitimate methods cannot be enforced. Rodsters are busy preparing for the holidays, and live bait is at a premium. A happy Christmas and plenty of sport is the wish of a brother rodster.—George F. Salter.

Derwent (Chatsworth).

There has been a great change in the weather since my last communication. The snow has all disappeared, and the atmosphere is now very mild, but owing to the snow going so rapidly the river is again in high flood; but it is now materially subsiding, and if weather continues good will soon be once more in fishable order. Anglers have been doing nothing in this neighbourhood for a fortnight now.—Wheatsheaf Hotel.

Dove.

Since my last a thaw has prevailed, and I am glad to say that most of the snow and ice are now gone. To-day (Thursday), in fact, it is more like the beginning of spring, the sun shining out warm and bright. However, the river is unfishable in consequence of its height and the enormous quantity of snow-broth therein. It must be several days before angling of any kind can hope to be resumed with any degree of success. Should the present weather continue, however, I don't see why the water should not be in order for the Christmas holidays, in which case we are certain to have a large number of fishermen out.—The Splodger.

Medway (Tonbridge).

The river is running down nicely, and with a few days' fine weather will be in capital condition for rodsters. Jack should be well on the feed, and no doubt but that a lively dace will be a telling bait, though a golden carp has been tried lately with great success. Some good roach will be caught with a well-scoured worm by those who have the patience to stay in one spot.—Ye Medway Water Rat.

Nene (Northampton).

We have had no angling of any description in the Nene since my last report, on account of the flooded state of the river. The water has rapidly gone down since Tuesday, and if we have open weather I think I shall be able to send you a good report next week.—F. F.

Ouse and Ivel (Blunham).

Both rivers are in very good condition for fishing.—P. E.

Ouse (St. Ives).

I have been unable to report for some weeks past owing to the unfavourable state of the water in consequence of recent and numerous floods, but am now in a position to state that the river here is in splendid condition, and that roach especially are on the feed. During the last few days also some excellent sport has been had amongst the pike. Weather being favourable and the floods having subsided, plenty of fish may be caught during the next few days.—

Tom Odams.

Thames (Datchet.)

The water is in splendid condition for all fishing. The roach and perch are biting freely. Several jack have been had near Surby Hall, the largest 6½ lb. Altogether, the takes that have come to my knowledge have been moderate; but taking into consideration the very few rods at work this season of the year, things are not so bad. Water splendid, and delightful weather.—George Lumsden.

Thames (Goring).

Water now a little thick, in good order for roach-fishing; by Sunday, if it keeps fine, water will be in good order for jack and perch. Sport during the past week: perch have been biting very well. I have been out two days since my last report. Best day was Saturday, two jack, largest jack 3 lb, and two dozen of very good perch. Prospects at present look well for the next few days.—John Rush.

Thames (Halliford.)

Although the river is still high some fish are to be taken on the eddies and backwaters. I had two days' work within the past week with different gentlemen: first day, three good jack; second day, four jack and some nice perch, the seven jack altogether weighing 30 lb.—George Rosewell, fisherman.

Trent (Alrewas)

Nothing doing; river reported to-day, Thursday, bank full and the waters too much discoloured for any prospect of sport. It is now three months since the river was in anything like good fishing order, and I do not think it very long odds we shall get a change for the better before close time.—James Gregory.

Trent (Newark).

During the latter part of last week the water was fining down very nicely, and the spirit of the anglers rose in anticipation of some fairish winter's sport; in fact, a few very nice roach, dace, and chub were taken, and an odd pike or two; the cockspur worm doing the most execution among the former fish; but on Saturday a very heavy rain fell, accompanied by a rapid thaw, and on Monday the river was again running bank-full and very thick; by Tuesday night a very heavy flood was sweeping down the valley of the Trent, and some hundreds of acres of the low-lying meadows submerged. To-night, Thursday, the water is rapidly going down, and fining nicely, so if the present condition of things continues, some fairish fishing may be anticipated for the Christmas holidays. Slack corners and eddies should be productive of sport among the roach and dace, and if the angler has any, a few gentles should nobble those fish; if not, try the cockspur worm. If the water fines down sufficiently, chub should revel in the attraction of pith and brains. Snow broth is the only drawback to good sport, but the water will improve every hour now, and perhaps next Tuesday, or Wednesday, a decided improvement will be found; anyhow, I hope all readers of the Fishing Gazette will have a merry Christmas, and succeed in nobbling some good fish.—The Trent Otter

Wharfe (Yorkshire).

An entire change has taken place in the weather since my last report, the snow having nearly all vanished, and the temperature to-day reminds one more of April than December. As a natural sequence the rivers are all full of "snow broth," and it will, therefore, be useless fishing for grayling until it has all got away. Referring to Mr. Corry's remarks anent grayling taking the minnow, there is no doubt whatever that they sometimes do so; but according to my own experience, they do not run at it "like a bulldog," but on the contrary, take the bait very quietly, generally just when it is curving round near an eddy. I entered fully into this disputed point in my article on autumnal grayling fishing in this paper last year, but no one except A. R. I. E. L. took the matter up. I hope that our worthy Editor and all the contributors to and readers of the Fishing Gazette may spend a very "merry Christmas," and that the coming season of 1883 may prove a highly successful one to all of you. —Francis M. Walbran.

Witham (Boston).

Mild, and almost Spring-like, weather has prevailed during the week in East Lincolnshire, and the waters throughout the Fen District have been in fairly good condition for the winter, with the exception, perhaps, of the Witham. This latter might be a trifle better in colour, but both it and the larger drains have run down pretty well. As I anticipated, some of the more anxious anglers went out on Friday and Saturday last, and although they were only partly successful, the sport they met with was not to be despised in these precarious times. Some were busy on the Bargate Drain early among the roach, and had six to eight pounds for the day, and since they have done well on this water. On Sunday a batch went to the Aqueduct and Cross Drain waters, after pike; but they did not land many, the fish being sluggish, I suppose, from the snow broth that must have been present. As the week progressed the sport improved, and on Tuesday and Wednesday some pretty good pike were taken from the Hobhole Drain at different points. On the Forty-Foot some of the later roach takes have run up to 9 lbs. and 10 lbs. per angler. On the Witham at Kirkstead, I heard of a nice pike of nearly 10 lbs. being taken between tides on Tuesday, and there have been odd hauls at stations higher up. These were the first pike taken from the Witham for some weeks; at least, the first I have heard of. Pike of 6 lbs. to 9 lbs. each have been included in several of the takes this week in the locality. We expect some good sport for the holidays.—The Yellow Belly.

Wye and Derwent.

On Monday last we had floods on both of the above rivers. The cleach nets were at work, as usual, on some parts of the Derwent, but I heard they killed very little fish, owing to the water being so clear and snow broth being in the rivers. The bottom fishers on various parts of the Derwent have killed a very fair quantity of fish with both cockspur worms and maggots, the worms killing the greatest quantity of fish and the largest sized ones. The fish killed were grayling, roach, dace, and a few small perch. To-day (Thursday) I have just seen a fisherman with nine or ten brace of coarse fish, all killed with cockspur worms. Fair quantity of anglers out. There will be no more fly-fishing this year. Weather showery and quite mild.—G. J. Eaton.

Yare (Norwich).

My anticipations have been realised with regard to sport improving on this stream. At Buckenham, the latter part of last week, some good roach-fishing was had, forty being taken in about three hours. A day or two later, a most skilful angler, locally known as "Tubby Death," had a splendid catch of bream, at Thorpe, near Norwich, many of them weighing 2½ to 5 lb. As I saw this catch, I write with great pleasure, it being quite a treat after the long spell of non-success which has attended the efforts of old Izaak's followers. On Tuesday last, another gentleman caught upwards of 4 stone of good bream in the same locality; and on the same day, Mr. G. G. Whincop, of the Champion Angling Club, landed 3 stone of bream in a short time. His note informs me he was only fishing from 11 until 3 p.m. The result of my enquiries proves that the fish are up with the flood waters, and anglers will do well to note this fact, and not go down stream. A friend and myself were at Buckenham Ferry last Saturday, trying for a jack, but we did not have a single run. The water was not clear, and we were rather late. No accounts of jack-fishing have reached at present. I am anxiously looking out for them, and consider some fish ought to be brought to bank now, as the water is getting into good condition for all-round fishing. Prospects good.—Robert Moll.

ANSWERS TO CORRESPONDENTS.

E. L. G.—Yes ; we hope to use it soon.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

Owing to pressure on our space several letters from correspondents are left over till our next issue.

THE SURGICAL NEEDLE HOOK.

Sir,—I have as little desire as Mr. G. Fennell to enter into a "literary duel," and with this letter I close the correspondence on my part. Yet I cannot allow Mr. Fennell's letter to pass unnoticed, especially as he assumes and backs up his assumption by assertion.

It is a "curious coincidence" that both he and I should have fallen into the same mistake in using the words "Glover's Needle." I have withdrawn the expression, as I am not indebted to it for any hint. Mr. Fennell is quite welcome to retain it if he likes.

Since my letter appeared I have made enquiries "in both trades," and am informed that no glover or furrier will permit the use of a triangular needle, and that the saddler uses a round one, a four-sided awl, and sometimes a four-sided needle.

It strikes me forcibly that when Mr. Fennel read my letter, he became like J. McD., wise after the event, and said to himself "Oh ! ah ! it is what I *meant.* I will thank the doctor for pointing out my 'inadvertence.'" There is, I say, no inadvertence – the fact stands plain as day in his book. "The points should be filed SQUARE," and if the saddler's needle, which Mr. Fennell alludes to, had been the form advised, instead of glover's, the passage would have been correct.

"Instances of the same notion occurring to more than one mind" are quite common. My notion, as I said in my former letter, was not derived from Mr. Fennell's "Book," but some twelve years before its publication—i.e., when I first had much to do with surgical needles. Long before this had I sharpened hooks, but not till then thought of the kind of point. Neither am I indebted for the idea to a much more ancient writer, whose instructions to sharpen a hook I will quote:—"Have also a little whetstone, about two inches long and one quarter square ; it is much better to sharpen your hooks than a file, which either will not touch a well-tempered hook or leave it rough but not sharp." (Paragraph 7. p. 10. "The Experienced Angler, or Angling Improved," by Col. Robert Venables, fourth edition, London, Richard Marriot, 1676). This little whetstone is at the present day carried in the pocket of veterinary surgeons, to sharpen their triangular needles, which are daily used in stitching up wounds penetrating the skin of the lower animals.

Col. Venables is right when he says a file will not touch a well-tempered hook. So said a member of the "Gresham," when I was giving a demonstration with the surgical hook. He said, and I take it he is best qualified to know, being an iron and steel manufacturer, "You cannot file a well-tempered hook." I answered, "This hook was ground to its present shape in the untempered condition."

After all, what is the use of squabbling over the matter ? Suppose I gave Mr. Fennell all the credit of the idea, what is the use of the idea if it is not brought into practice ? If the same "notion occurred" to Col. Venables 200 years ago, to Mr. Fennell forty years ago, and to myself at a later period, what then, if the "notion" remains only a notion ? I claim credit for having brought it into use. What anglers want is something of use.

"M. F." says, "I freely and unconditionally exempt the Doctor from the slightest desire to plagiarise." I must thank "M. F." for nothing, as I neither had the desire, opportunity, nor means of plagiarising, and I am sorry he made use of such an evil-sounding word.

Wishing Mr. Fennell the kind compliments of the season, and yourself also. —I am, &c., John Brunton, M.D.

21, Euston Road, N.W., Dec. 20.

MR. ANDREW'S LARGE ROACH.

Sir,—This was an error : it should have been 2 lb. 14 oz. of roach.—I am, &c., Jas. Lander, hon. sec., Piscatorial Society.

THE SURGICAL NEEDLE HOOK.

Sir,—I have been much interested in the correspondence on Dr. Brunton's surgical needle-shaped hook.

As Mr. Greville Fennell admits, the triangle is preferable to the square ; and although there is a substantial agreement in principle, yet the practical difference is great. Mr. Greville Fennell has evidently anticipated the doctor in appreciating the advantages of angularity, but the difference in cutting power of a point with four rectangular cutting edges, and one with two acute angles, and an obtuse one like the surgical needle, is so enormous as to render comparison almost out of the question.

Mr. Fennell may have really had his hooks made somewhat similar to Dr. Brunton's, and the fishing world must feel much indebted to the doctor for eliciting from him the fact. I write hoping that, through your medium, all fishing-tackle makers will take note of this, and in future influence the manufacturers in providing this latest improvement, so essential to the success of all anglers, without waiting the issue of another edition of a work that may not be published for some time to come.—I am, &c.,

56, Richmond Road, Barnsbury, N. A. C. Tucker.

THE BAYONET GLOVER SURGICAL NEEDLE HOOK POINT.

Sir,—It is to be hoped that we are not to have another unpleasant controversy as to "who is the father of the above." We have all got the facts before us now, and no amount of acid writing will alter them. Will Dr. Brunton kindly say if any retail fishing-tackle house keeps hooks made to his patterns ?—I am, &c., D. McJ.

GLOVER'S NEEDLE HOOKS—ROACH BITES.

Sir,—It would doubtless be useless, in Dr. Brunton's present frame of mind, to attempt to convince him of the fact that in my letter headed "Bayonet-pointed Hooks, &c.," I had no thought of detracting from his merits in any particular, of accusing him of a desire to take credit for anything not his own, or even of "damning him with faint praise," as he avers. However, if he has been damned in any way, I can imagine nothing more likely to have performed that operation than his own ungracious effusion of the 9th inst.

In my reference to the "Book of the Roach," I endeavoured to show that to Mr. Greville Fennell belongs the credit of the idea of, let us say, "Glover's needle-pointed" hooks, and having succeeded in that endeavour, as most unbiassed readers of the correspondence will allow, my medical opponent's opinion of myself, my motives, and my writings are to me a matter of the greatest indifference. I certainly did not give the author's exact words, nor attempt to do so, as it is quite six years since the work in question was in my possession. The point upon which I laid particular stress was the use of the simile "Glover's needle," in which Dr. Brunton was undoubtedly preceded by Mr. Greville Fennell, who made use of it, as his letter proves, to exemplify a triangular cutting point, although by an inadvertence he employed the word "square"—a very small matter, as the triangular shape of a Glover's needle is sufficiently well known.

My memory may possibly be thin, but it can scarcely be as flimsy in quality as those of some of the Doctor's numerous fellow-members, who did not remember what I have now pointed out when their friend introduced his invention to them. It is scarcely probable that among so many anglers none of them had ever read the "Book of the Roach," especially when it is considered how readily one was produced in the futile endeavour to refute the main, or "triangular," point of my argument.

Passing over the advice, which I do not admit the Doctor's right or ability to give me, and his charge of untruth which is dispelled by Mr. Greville Fennel's letter, I come to his petty accusation that I lack the courage of my opinions because initials only appear at the foot of my communications. Now, if the Doctor is at all anxious to know my name, there are at least two members of his own society who can give him the information ; but it is, perhaps, due to you, Sir, to explain that I adopt initials for purely business reasons, and in consequence of a prejudice against fishing on Sunday, not shared by myself, but which I cannot afford to wholly disregard.

As "Mark Antony" appears to be deeply engaged just now, I will not this week occupy much space in writing on the roach-biting question ; let me, however, assure him that I did read the letters he refers to, not once, but at least half-a-dozen times—and carefully too—but could find nothing therein to induce me to alter my previously expressed opinion that an average of four bites lost out of six in ordinary roaching is very much more imaginary than real.

While wishing you, Mr. Editor, "Mark Antony," and even my more implacable opponents all the compliments of the season, I cannot conclude without thanking Mr. Greville Fennell for his kindly-expressed sentiments in the same direction, and in hoping he will accept the same from me. Let me further take this opportunity of placing on record my deep indebtedness to him for many happy hours spent at home in the perusal of his writings, and in the practical application of them at the water-side.—I am, &c.,

J. McD.

DINNER TO THAMES RIVER-KEEPERS.

Sir,—Will you kindly allow me, through the columns of The Fishing Gazette, to solicit a small contribution of half-a-crown each from the anglers of the Thames, towards giving a seasonable dinner to the whole of the river-keepers employed by the Thames Angling Preservation Society and the Board of Thames Conservancy, and also to the lock-keepers who now hold deputations to act as river-keepers, and to those fishermen and others who have at times assisted the keepers when extra watching has been required ?

I am desirous of appealing, more especially to the large body of anglers who do not at present subscribe towards the protection of the fishery, but may be ready to recognise the duties of the river-keepers by sending me the very small amount I have asked them for.

May I venture to hope the response will be liberal and prompt ?

Swagfield Villa, Hounslow, Dec. 21st. W. H. Brougham.

P.S.—A Statement of Accounts of the receipts and expenditure will appear in the "Blue Book."

BARBEL BITE.

Sir,—Has "Lay-brother" tried the barbel tackle with small hook fastened on gut at top of shank of large hook ? This helps to keeps the worm on, and the barbel also.

He should read "The Trent Otter's" chapter on barbel-fishing.—I am, &c,

Mark Antony.

A ROACH PROBLEM—A SPINNING QUERY—AND PASSING REMARKS ON THE ROACH CONTROVERSY.

Sir,—It appears to me "E. W. A.," "A. T.," and "J. McD.," esquires, think I and "The Trent Otter" have been humbugging them. "A. T." says in his last, "Where did you catch these fish?" I will tell him. At Norston Holt, at the Sentry Box, at Besthorpe Fleet, at Monspool, at Blackpool, and when in flood, in the rivulet running between Collingham, near Newark, Notts, and Besthorpe Fleets; at Carlton-on-Trent, at Sutton-on-Trent, at Cromwell-on-Trent, at Muskham-on-Trent, in the lordships of Langford and Winthorp, at the Meering Ferry, near Muskham Ferry, at the corner of the Beck end, Carlton-on-Trent, in the Oven—get hold of a barbel on a fine dace line in this place about 6 lb., and see what you think of it—at the Hook Doors, near Girton, at the Muck Tub, at the Flags, the Red Bank—a bank between Meering and Girton, about 12 feet plumb—near old Ire Hunt's Fishing Hut near the Jolly Bargeman, Collingham Ferry, at Besthorpe Staith, Collingham Staith, under Carlton boat-fishing, Pool Hearne, at the mouth of Wilson Pool, in a freshet of water, and in every field, without a single exception, right and left from Muskham Ferry to Girton, some six or seven miles, and at Dunham Dubs, where there is *the* celebrated bream hole, which is 30 feet deep at low water, and, friend "A. T.," allow me to tell you as many as 2 cwt. of bream have been taken here in one day. You do not believe it. Write to the postmaster at Newton-on-Trent, Lincolnshire, mention my name, and ask him if the fisherman, Williamson, will let him know the weights of bream taken out of the Bream hole at Dunham Dubs, and tell me the result.

You doubt everything. You say it is most peculiar he should have fished the Ravensbourne 20 years—how old he must be. Not a bit, "Anti-Theory," Esq., you are not in the secret. I am happy to say I am rather too old to fish there in the daytime. Now you are no wiser. Last summer I paid about 20 visits to the Ravensbourne. I generally start at half past one in the morning (much to the disgust of several members of my family, and one in particular), and arrive there about 2.30. Come with me one morning, "A. T., Esq.," next summer, and see the sun rise and hear the lark. This is a beautiful arrangement, as you have it all to yourself. No lovers, no dogs, no crutches, no toothpicks. It is simply glorious. Keston—supposing I walked, I should arrive at Keston about 3 starting at about 11.30. I am a slow walker. I should have to walk 10 miles back, and if I staid for a little *Woodsia ilvensis*, *Ophioglossum vulgatum*, not to mention *Hymenophyllum tunbridgense*, when should I get back? Happy thought. In my opinion, commend me to the study of ferns for a quiet, lonely, simple study. I shall not forget "Bracken" in a hurry. I shall be delighted to accept your kind invitation; but what do you mean when you say, "No excuses, 'M. A.'"? I cannot understand you. Even to see three such masters of the art as yourself, "E. W. A." and "J. McD." esquires, evidently are—ah, I know you—I would walk 10 miles to see such a performance. You should learn the Nottingham style of paying the line out from the reel, and get into one of those grand quiet, deep eddies—say the one at Sharp's Corner, or the one at Fosttet's Hole, and as you watch your float moving along like a thistle down moves through the air on a very still day, or like a toy ship being taken along the water by a gentle breeze, along she glides, that inch of slender white quill with the red tip silently cutting through the water like a living thing gliding along without the least hitch, she sails down the stream without the least shaking. Gracefully, beautifully, as the line is gently paid out, on she goes 15, 20, 25, 30, 35, and even more, yards, when under she pops, and the angler, like lightning, with a strike he has studied to a nicety, sends the hook home. The rod at once bends to the fish, and if it is a good barbel and a clever man, you will see sport to perfection. You don't believe it. Then what do you believe? One word about the Welsh Harp. You doubted that I began to fish at half past 12. I used plenty of ground bait. It was nearly 2 before I had my first bite—a grand bite, I said to myself. At last I struck, missed; rebaited, struck again, missed. Now listen "Anti Theory," they smashed the float under as if it had been shot out of a gun; they dragged it here, they dragged it there, tilted it, wobbled it about, they reared it straight up, they laid it flat—pray, believe me—ran away with it like the very devil; sailed out with it, sailed in with it; on some occasions they came rushing towards the side with it, and this game kept on at intervals for hours, and when I left off the result was five small silver bream, about ½ lb each. Why, the bites I missed, if they had been decent fish, I ought to have had about 30 lb. I sincerely hope and trust I know better than to tell deliberate untruths simply for the sake of telling them. As I said in my report, others had been served the same. One man said they sucked the bait off! Sucked the bait off! More like lashed it off with their tails. Now I am almost sure I know what it was, but am afraid to say. I have always tried in all I have said to keep to the truth.

Now listen, "Anti-Theory": I wonder what you, "E. W. A.," "J. McD.," and J. F. Waters, would say if I were to tell you I recollect the time when some people never used a reel when spinning for jack—never thought of such a thing. There was Blood Wilson, of Besthorpe, Sol Nicholson, of Collingham, and my late uncle, George Hewes, always spun for jack without a reel. The end of their line was tied to a piece of cork, card, or wrapper, and they coiled it on the ground near their feet, and they could spin, I tell you, and throw in a bait almost as softly as a swallow kissing the surface. Mind you, they seldom made long casts, and after all, these terribly long casts are scarcely worth the candle, for seven times out of ten the best jack in rivers are taken either in back waters or deep holes near the sides.

If "E. W. A." and "Anti-Theory" say they can strike 23 out of 24 bites, I am bound to believe them; but will they tell me how many times they fail to do it in the course of one season? However, they now know my address, and I hope they will keep their word. I ought, perhaps, to have said, ordinary roachers sometimes about once in 10 years miss four bites out of six. In conclusion, Messrs. "Anti-Theory" and "E. W. A.," you have proved yourselves gentlemen, and I shall look forward with intense anxiety to the day.—I am, &c.,

Mark Antony.

A QUERY FOR "MARLOW BUZZ."

Sir,—I noticed in to-day's Fishing Gazette, under the river report "Mid-Thames," by "Marlow Buzz," an account of a jack taken from the Thames weighing 27½ lb., length 37½ inches, and girt 22 inches; also the remarks of "Marlow Buzz" which follow, viz., "It seems strange that this fine specimen of *Esox lucinus* for its grand weight should have been so short."

Does it not also strike you, Sir, that this weight is very strange considering its length and girt?

I am led to make these remarks feeling sure there must be a mistake somewhere.

Perhaps the following particulars of two pike taken by myself, and now in my possession, may interest your readers:—

One taken November 9, 1881, weight 23 lb., length 42 inches, and girt 22½ inches. The other, taken February 3, 1882, weight 26¼ lb., length 42½ inches, and girt 23½ inches. Both fish taken in public waters.

Trusting these remarks will be taken by all parties interested in the same friendly spirit in which they are written,—I am, &c.,

Lowestoft. Lewis T. Johnson.

NETTING THE RESERVOIRS.

Sir,—At a meeting of the committee of the Piscatorial Society on Monday last, the sum of three guineas was unanimously voted to the Thames Angling Preservation Society towards the defrayment of expenses incurred by them in netting the reservoirs, and I have the pleasure to enclose a cheque to you for the sum.—I am, &c., Thomas Ransom Sachs, Deputy Treasurer.

22, Hyde Park Place, Cumberland Gate, London, W.

Re IRISH PIKE.

Sir,—Pennell gives the weight as 96 lb., and as having been caught in Broadwood Lake near Killaloe, see pp. 15 and 16 Pennell's "Book of the Pike." I think it nearly time this Irish pike was landed; but, then, you see, he's a regular slogdolager, and wants a lot of killing.—I am, &c.,

T. R. Price.

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived. Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

ALFRED YOUNG
"The GOLDEN PERCH,"
TRADE GOLDEN PERCH MARK.
402, OXFORD ST.,
London, W.
FISHING RODS and TACKLE
of every description.
The Angler's Handbook and Catalogue of Prices, with eighty Illustrations of Rods, Flies, Baits, Tackle, &c., post free, Three Pence.

NOW READY.

THE HANDBOOK
TO THE
RIVERS AND BROADS
OF
NORFOLK & SUFFOLK.

By G. CHRISTOPHER DAVIES,
Author of "The Swan and Her Crew."

With a Splendidly Coloured Map of the Rivers and Broads.
In Paper Boards, 1s. 6d. Cloth, 2s. 6d.
JARROLD and SONS, 3, Paternoster Buildings, London, and Norwich. And all Booksellers.

GISHURSTINE for Dry Feet and Boot Comfort is much used by Sportsmen, Shore Waders, Farmers, Gardeners, and Ladies.
Sold by Nurserymen and Oilmen, with testimonials and directions for use, in boxes 6d. and 1s. each. Wholesale by Price's Patent Candle Company, Limited, London.

CIGARS.

Gentlemen by joining together and purchasing a Case of Cigars (containing not less than 80 lb. weight) in Bond will save
100 PER CENT.
The Case may contain an assortment of different brands if required.
J. Cowley & Co., Cigar Importers, Prince's Dock, Hull.

WHITE HORSE HOTEL,
ST. IVES, HUNTS.
(Adjoining the "River Ouse.")
Famous for Excellent Fishing. Roach and Pike in abundance.
Boats, Punts, Bait, &c. Every accommodation. Bed and Breakfast, 3s. 6d. Billiards, &c.
Special arrangements with G. E. Baily, in connection with St. Ives and District Angling Society.
Tom Odams, Proprietor.

FISHING ON THE OUSE.
THE ANCHOR RIVERSIDE HOUSE.
(Great Burford, Beds.)
This well known old established Inn has been thoroughly renovated, and is under entirely new management. Capital accommodation for fishermen. A private suite of apartments for families.—Thomas Coombs, Landlord.

80,000 Parrots Imported Annually.
A beautiful African Grey, with crimson tail, sent to any address, package included, for 15s. If not satisfactory on receipt, money returned. A host of other stock. Beautiful Singing Canaries, small foreign birds, Pet Monkeys, Tortoises, Peacocks' Feathers, 5000 Parrot Cages, and fresh arrivals daily. The Grey Parrot—the Thirty Guinea Bird—that took the two first prizes at the Surrey Show in 1878 and 1881, was purchased from me a young bird.
WILLIAM CROSS, Largest Importer in the World, LIVERPOOL.

100,000 BIRDS IMPORTED ANNUALLY.
On view daily at 166, Great Portland Street, London, W.
(Two minutes' walk from Portland Road Station),
The Largest and Cheapest Collection of British, Foreign, and Continental Birds, German Canaries, Piping Bullfinches, Talking Parrots. All soft-billed birds kept in stock.
One visit is sure to give satisfaction.—E. Etable.

The Fishing Gazette.

SATURDAY, DECEMBER 30, 1882.

THE NATIONAL FISH CULTURE ASSOCIATION OF GREAT BRITAIN AND IRELAND.

IN reply to numerous enquiries from gentlemen desirous of becoming members o the above, we beg to say that all such applications are being filed, and will be attended to directly after the first meeting of the council, which will take place about January 20. Any gentlemen wishing their names proposed at the meeting for membership, are requested to write to Mr. R. B. Marston, Fishing Gazette Office, 12, Fetter Lane; or Mr. W. Oldham Chambers, Lowestoft, hon. secretaries of the Association. The annual subscription was fixed by the general meeting at one guinea.

NOTES ON A PIKE-FISHING EXCURSION WITH MR. JARDINE.

By R. B. Marston.

WHEN my friend, Mr. Jardine, called on me on Tuesday in last week to ask if I would go with him on a pike-fishing excursion into the West of England, it did not take me long to decide. After leaving everything as straight as possible for the Christmas Number of the Gazette, with sundry cautions that no libels were to be inserted in my absence, I left town by a five o'clock train, and about 11 at night found myself at a little country station, and Mr. J. on the platform waiting for me. A pleasant walk through one of our oldest English towns brought us to our very comfortable hotel. Mr. J. had been out all day spinning, and took me to the larder to see his spoil; ten splendid pike, from ten pounds down to four. I think I never saw more handsome, thick, well-fed fish. Next morning we were up early and took the train to a spot some miles up stream, where our boat was waiting for us. A boat is a necessity on the rivers we were to fish, as the country is intersected in all directions by deep dykes and ditches. We began by fishing all the quiet corners with live bait on Mr. Jardine's snap and paternoster, but the fish were not "on," and we neither of us did much this day (Friday), getting only about half-a-dozen fish, from six to four pounds. Mr. J. had his fine gimp paternoster bitten through three times. I tried spinning from the reel in the afternoon, and got two fish in that way. We discovered in the evening from some gentlemen who came in to dine with us, that much of the water we had fished was netted by the farmers, and that the water lower down, which we intended to fish next day, was more likely to yield good fish. We found our visitors very jolly fellows indeed—hunting and shooting were more in their line than angling, but what with sporting stories of all kinds, we found it was one o'clock long before we thought it was so late. Next morning the weather was again all that we could desire—mild, fine, and with a strong breeze blowing. A drive of five or six miles through a lovely country brought us to the hamlet where we had left the boat the previous day. I had noticed some fishy-looking streams near the mill, and while Mr. J. went on to the boat to try a famous hole, I had half-an-hour's spinning. I got a fish the second cast, then ran another and pricked him, then I had a curious bit of experience in a deep hole between some reeds. One of our boatmen was with me to show me the places, and he pointed out this place as one containing a 15 lb. fish to his certain knowledge, as he had stirred her out of the reeds only the day before. There was very little room to spin, so I dropped my bait, one of Gillett's capital gudgeons, by the way, into the hole, and then drew it slowly up. I saw a pike follow it slowly, so when I got to the top, near some weeds, I stopped the bait; the pike stopped and looked at it, then I gave it a little jerk or two and he had it in an instant, and was not landed without a good fight; it was about five pounds. Why that pike, after criticising the artificial so carefully, should have taken it, I cannot say; certainly the bait is beautifully coloured and looks more like a samlet than a gudgeon, and samlets are the fish these pike feed on as long as they can get them. I forgot to mention that the stream is often full of salmon. I got another fish spinning and then went to join Mr. J., who informed me he had got a ten pounder after twenty minutes' splendid sport in a strong stream. We then dropped down stream in the boat, and I put on a live bait, and in a splendid "corner" get hold of my best fish—an eight pounder, on a fine Nottingham line, in a stream too strong to row against; he gave sport that one rarely gets out of pike. We picked up a few more fish before lunch time, and then Mr. J. got hold of his best fish, one of 17½ lb. It was in a splendid bit of back water. I leave it to the members of the Gresham to say if it was a pretty fish or not. We drank her health. I got a few small fish and returned most of them, and then we dropped down again. On our way down Mr. J. called out: "Look there—two big salmon fighting!" The fish were "spent," and rolled down with the current, fighting as they went. Presently we came to a broad shallow, a splendid bit of spinning water. I put on my gudgeon and cast from the reel; Mr. J. had an artificial also, and used the Thames style, and here we had as pretty a bit of sport as I have ever seen. First, I had a fish about 6 lb., then Mr. J. got a small one, then I had another, then Mr. J., and so it went on. Finally, Mr. J., who stuck to the boat, while I fished from the bank, got hold of a fish of 14 lb., which gave him a fine dance. I hope to have another spin over that bit some day in company with friend J., for I must say, I think spinning for jack far and away better fun than live-baiting. We had to catch an early train for town, and so we rowed down for some miles; the river winding in and out like a big snake, made our journey six times as long as it would have been by land. And what a stream there was! We had to keep a sharp look-out for bumps against the bank, which often nearly shot us overboard. Reluctantly we passed numberless good places—quiet, deep bits, out of the main stream, sure haunts for pike. Every now and then our boatmen would point to some place where Mr. J. had caught a 20 pounder, or a 27 pounder, or some other monster. Wild ducks, geese, widgeon, and other birds rose screaming from the reeds as we flushed them, causing an exclamation of "My word, what a shot," from one of us every few hundred yards. Our boatmen spun yarns of sport with rod and gun, as we quietly swept along; the sun got deeper in the west, casting long streamers of light over one of the most lovely skies imaginable. "We shall have rain in marnin'," said our boss boatman—a pleasant, dry old stick of a fellow as ever handled an oar. "Why?" said Mr. J. "Don't he zee how stragulated loike them clouds be?" J. and I had a good laugh afterwards over that word "stragulated." Very expressive it was, though, of the lovely cloud picture over us. A hurried meal at our hotel, frequent hopes for our enjoying a Merry Christmas, and that we should soon come again, and we were off to London. To me this was, without exception, one of the pleasantest angling trips ever I had. Not a few good wrinkles did I learn from Mr. Jardine. His snap tackles are perfection: I did not miss a single fish with them, neither did he, except the three which bit the gimp through. It is worth a day's journey to see him work a hole with the paternoster; every corner is thoroughly searched. Often and often I expected to see him land his bait in a weed bed, but it always fell just clear of them. "You cannot get too near the reeds if you don't absolutely foul them," he would say; "in nine cases out of ten that's where the fish lie, even when the water is so shallow they have hardly room to lie in it." I must mention here, that in the drawings I gave the readers of the Gazette last week of his tackles, there were two errors. They were hurriedly done, and Mr. J. did not see the proofs. In putting the hook in the root of the dorsal fin, it should be done more forward, *i.e.*, nearer the front part of the fin than is shown in the engraving. And in the paternoster snap the lip hook should be put through both lips; if it is only put through the upper lip the bait soon gets killed, its back is broken with the jerk in casting out; but if the hook is through both lips this cannot happen, and, curious though it seems, the bait lives much longer with the hook through both than through one only.

As a conclusion to these hurriedly-written notes, I will append a letter just received from Mr. Jardine.

Dear Mr. Marston,—I weighed in 10 pike on Saturday night at the Gresham Club-room, the lot weighing 85 lb. The two largest weighed 17½ lb. and 14 lb.; 4 small ones I did not weigh. Thus our bag was over 1½ cwt., viz:—

Caught	10 pike ..	85 lb.
,, ...	4 ,, ..	12 ,,
Left at hotel	5 ,, ..	12 ,,
Kept of your take	8 ,, ..	50 ,,
Given to Farmers	4 ,, ..	16 ,,
Put back in river or given to keeper	8 ,, ..	14 ,,
		189 ,,

I think this was good sport, and I hope you were pleased with the trip and enjoyed it as much as I did. The 17½ lb. pike measured 35½ inches in length and 19 inches in girth. It and the 14 lb. have gone to Sanders to be set up in one case for the Critchfield Angling Society, of which I am a memher. I read in Saturday's F. G. "A Query for Marlow Buzz," and I feel convinced the pike he wrote about never weighed 27½ lb.—that is to say, if his measurements are correct, viz., only 37½ inches long and 22 in girth—for I have one 37½ inches long and 21 in girth of 21 lb.—another 38½ long and 21 in girth, 23 lb., and my 27½ lb. pike, caught last February, is *very much* *larger* all ways, *i.e.*, *length and girth*, than the one he mentions in the F. G. of the 16th inst.

P.S.—Since writing the above I have referred to the measurement of my 27½ lb. fish, caught February 24, '82 : the length was 44 inches and girth 23 inches, and for contour and fine condition it was considered by good judges as one of the best fish caught for many years. How, then, is it possible for the fish described by "Marlow Buzz," as measuring only 37½ inches in length and 22 in girth, to have weighed 27½ lb.?

Very truly yours,

Alfred G. Jardine.

38, Old Change, Dec. 26, '82.

I might mention that all our fish were taken on gut traces, and I am sure they are, as compared with gimp, infinitely stronger and more durable, as well as less visible in the water.

FLY-FISHING-SPINNING.—II.

"The Slaves of Custom are the Sport of Time."

THE history of these articles, as far as regards myself personally, I gave in the former article. I would commence this one with a few remarks on the origin of the art itself. For many years, from his early youth up, Ward had practised with very great success, not only fly-fishing, but also the pitching system of minnow-spinning, with a line a little more or a little less in length than the rod, generally a little less long, an art which, in many of its elements, was the one described by Mr. W. J. Bullock's articles, to which I have already adverted. But some 10 or 12 years ago, when fishing on the Monnow at Pontrilas, near Hereford—a very clear water with very little cover—Ward was made aware that the mode of angling which worked so well in the wooded brooks he was in the habit of fishing, would not answer for the open, crystal shallows of the Monnow. Necessity is the mother of Invention :

"Die Menschenwitz des Menschen Nothdurft leiht."

He set his wits to work, and began by slinging out a minnow on his spinning-tackle, from his single-handed fly-rod. He soon found

"'Tis distance lends enchantment to the view"

of a minnow in the eye of a trout—distance from the angler! He caught a very large basket in a very little time—I believe some 35 lb. in the afternoon. That was the egg or embryo stage of the new art. He dropped the pitching form of spinning at once and for ever.

'Twas

"The old order changeth, giving place to new",

once more. Gradually he developed his first crude form of casting out a minnow from a fly-rod, and refined his never-coarse tackle, until, in the usual scientific way, by "the survival of the fittest," he had elaborated a complete system of fly-fishing-spinning, a whole

"Perfect in each minutest part."

So he thinks. And so I think. And so I believe that you, Mr. Editor, and any of you, my readers, would think if you once saw the art in practice at *his* hands. As regards his title to the invention, I am not ignorant that the very natural idea of whipping out or casting out a minnow with a fly-rod, whether a single-handed or a double-handed one, is said to have been put in use by others long before Ward adopted it. You, Mr. Editor, have assured me that the practice—with the natural minnow—is common enough in the North of England. And I know that in salmon-fishing an artificial minnow—the phantom—is often cast out from the fly-rod, *over-handedly*, like a fly. There are those who have pooh-poohed to me the notion that there is anything at all new in the matter. But, as at present advised, I venture to doubt, and that most sceptically, whether any angler has ever reduced the crude casting out of a minnow on a fly-rod either to one and the same, or to any other and as deadly an art as Ward has done. Exceedingly light and delicate tackle, and the use of small minnows of the most perfect spin are, equally with long, light casting, and slow drawing in of the spinning-bait, among other essentials, chief elements of his present style of spinning. The greatest specialty of all in it is the use of a considerable quantity of loose-line, which is cast out and drawn in, in addition, or as a supplement to the—not short—line which is taut out in the air behind the angler at the moment of the cast forward. But even if any other angler could prove his title to an earlier invention of this art, that would not disprove *Ward's* title to the honour of an independent invention of it, for there certainly was no prior user of the art to *his* knowledge. *He* will always be the Adams in the discovery of this bright, particular star, whoever may be the Leverrier. However, my object in making known the art is not so much to call fame on the inventor, to

"Spread *his* name o'er lands and seas,
Whatever clime the sun's bright circle warms,"

as, with his permission, to show, through your columns, to those—all the world over—who are passionately fond of minnow-spinning, another and a far higher and deadlier form of it. For should not Friends have all things in common? And are not Anglers Friends—all the world over? And is not Fly-Fishing-Spinning some thing?

"It *must* be so—Plato, thou reasonest *well*."

My preface ended, I proceed to describe the rod, and line, and tackle requisite, and the manipulation of them needed. And first, as to the rod. When fishing with fine tackle we should, I think, in our choice of a rod, endeavour to take the golden mean between maximum casting-power, maximum hooking-power, and maximum holding-power, if all those qualities of casting, hooking, and holding are, in their highest perfection—as I conceive they are—incapable of union in one and the same weapon, being, in fact, the effects of contradictory causes—stiffness and pliancy of the rod. By maximum holding-power I mean, in other words, minimum tackle-breaking, and that by virtue of the pliancy of the rod, yielding, reed-like, to every blast and gust of strain. But maximum holding-power in a stiff rod, used with coarse tackle, means a very different thing, to wit, what Dame Juliana calls "good haleing," but which we of the modern "fine and far off" school should call "skull-dragging." And the inference I draw is that one's rod should be just powerful enough for capturing the fish one is angling for, and—beyond a mere prudential margin for contingencies—no more. Each angler must, however, define "the golden mean" for *himself*, according to the relative importance which *he* attaches to raising a fish, to hooking it, and to holding it when hooked. And it must be recollected that the relative importance of these points means their importance relative to the angler's skill in handling the rod, and means, of course, relative also to the fineness or the coarseness of the tackle he is using. The more the angler by his skill aids the rod and the tackle either in raising, or in hooking, or in holding a fish, the more he can dispense with either the casting, or the hooking, or the holding power, both in the rod and in the tackle, having that power already, and in a far higher degree, in his own brain and arm. We have here another exemplification of the truth of the old Greek saying : "Man is the measure of all things"—to himself, the individual man. And my master's measure, and mine, of the rod for fly-fishing-spinning may be taken from the following remarks. The best form of rod is a light, pliant—*but not weak-backed*—one of from 10 to 11 feet. A weak-backed rod is as bad as a broken-kneed horse. For large fish, or for wide waters, or in a high wind the 11 foot rod is better, as being both longer and more powerful. It is also more useful in fishing brooks which in places are so heavily wooded that no casting can there be made, but recourse must be had to pitching the bait in those places. The extra foot of rod will be very handy for that pitching purpose. Eleven feet is an ample length for the rod in fly-fishing-spinning, in which the labour is heavier, and the rod is required to be a good deal more under command than in fly-fishing. Good fishing cannot be made with a rod that hangs at all heavily on the hand. As I have myself had built and have fished a good deal with single-handed fly-rods of all lengths between 13 feet and 10 feet, I am not without some practical experience on the subject. A 10 foot rod strikes more quickly than an 11 foot one of a like build, which is a great advantage. I work with three light rods, one of 10 feet and two of 11. The shorter the rod (the build being alike, or in the same ratio) the lighter, of course, it is, and the lighter, consequently, is the cast, another considerable gain. A stiff rod, and particularly a stiff and heavy rod, cuts the minnow, and casts it violently, or with a splash, upon the water; and it decreases the comparative strength, or, if you prefer the expression, it increases the positive weakness of fine tackle. It calls for a lighter hand. But in fishing with the finest tackle you sometimes want the lightest hand, even with the most pliant rod, as when you are playing a "*dangerous*" fish, as Patsy Ryan would call him. My rods are all modified Castleconnells, of the best London-make, and made to order, and "tried-on" in the making. They have an equal, gradual taper throughout, and thus a regular play from point to grip—which latter rises rapidly to the occasion—of the handling. It is very rarely I break tackle on striking with them, without adopting the expedient called "striking from the winch," which, as regards striking a fish, I look upon as but a palliative for a stiff rod, or a heavy hand, or both of those vices. No doubt, now and again, when, on making an extra long and strong cast, you catch your fly or fly-minnow in a bush, or a bent, or even a "sweet little buttercup" behind you, you may, striking in the usual way, come to grief and break tackle. And "once in a blue moon" you may in this wise be so unfortunate as to smash a rod-top, though fishing with a pliant rod and a light hand—yet then not light. But I do not think the evil is great enough to make it worth while attempting to remedy it by adopting the make-shift expedient of "striking from the winch" in fly-fishing, when fishing with a pliant rod and a fairly light hand. And in fly-fishing-spinning that expedient would not be applicable, inasmuch as the manipulation of the loose-line requires it to be always kept taut by the hand at the moment of the cast, as we shall see; the hand is also always on the line, drawing in the spinning-bait, when striking a fish, so that no winch-action could take place in either case. For the wood of the rod I use greenheart, in three joints, with cane points, which I carry very fine, as I like the lightest point to a rod. A heavy-pointed, pliant rod is necessarily a top-heavy one. If the rod be made with a second or inner tongue at each joint, as some of the American hexagonal, glued-up, solid-cane rods are made, so much the better. That obviates the need of wire-catches, and the fastening-together by their means of the rod with twine or silk. The inner tongues, I am told, prevent the rod-joints from being shaken apart by the most continued casting. In fly-fishing-spinning, if a very fine winch-line be used, it is apt to get under those wire-catches. That is owing in great measure to the fact that the casting is made with, in part, a loose-line, which, when very fine, and light, and *limp*, and especially in a wind, gets frequently danced or blown round the rod, and is then often caught in those wire-catches. I, therefore, when fishing with such a line, bind the edges of the catches down close to the rod with waxed silk, which effectually prevents their making mischief. As regards rings, it may be thought off-hand that standing-rings would be best, for the freer running of the loose-line. Not so, experience teaches. However small—and I have tried them not only large, but very small indeed, made of very fine German-silver wire—standing-rings catch the line round them, and are extremely troublesome. But the down-lying rings should be quite loose, so as to yield to the least force or pressure of the running-line. If stiff with varnish and tight-fixing in their sockets, as they always are on a new rod, of course there cannot be free motion of the running-line. When buying a new fly-rod for spinning, a special point should be made of having the rings perfectly loose. We have now, I think, dealt enough with the rod for aught but a fool's back.

Touching the reel or winch. The perfect form of it for the work under consideration is the now general one, with the handle fixed on a revolving plate, thus preventing the line from getting under the handle; but with that ordinary form modified by having some appliance, such as the Fishing Gazette winch, for preventing the line from getting round the winch itself. For that purpose I should much prefer to see the sides of the Fishing Gazette winch, at least at the lower end, towards the butt, slope or curve a good deal more outwards or buttwards. Mr. Cholmondeley Pennell seeks to accomplish the same object by a spring fastened to the hindmost bar of the winch, and running to the rod below the winch, or towards the butt. He gives a wood-cut of his appliance in his "Book of the Pike," p. 136. I believe Dr. Brunton has a somewhat different mechanism of his own invention to cure the evil in question. And, not to be outdone by them, or any, or either of them, I, too, have myself—

"In my mind's eye, Horatio,"

more than one or two other modes of effecting the end in view. One is a spring, attached to the rod-butt, to fasten on to the middle or hindmost bar of the winch, and when the winch is not on the rod, to lie along the winch-groove, being kept down by the sliding ring or band which holds, or helps to hold, the winch to the rod. Another mode of mine is a peg or button on the butt, from which an indiarubber band or cord passes round the middle or hindmost bar of the winch, and returns to, and is fastened on the peg or button. And when the winch is off the rod, that band or cord lies round the butt of the rod, and is fastened to the peg or button, just like the elastic band on an umbrella. And a good-enough make-shift remedy is a bit of twine tied to one of those bars of the winch, and then stretched out, and tied to the rod an inch or so below the winch. I confess I have never suffered much from the nuisance complained of either in fly-fishing or in any other form of spinning. But in this fly-fishing-spinning I own that I have found winch-entanglements of the line, especially when it is light and limp, and when a breeze is blowing, rather a characteristic, a consequence obviously of the running-out of the loose-line, particularly when it is light and blown about by a high wind—but increased a good deal, I suspect, by the awkwardness of the angler. The winch may be "check" or "plain," large or small, light or heavy, as the angler likes. The smaller and the lighter, the better I like it; but that is only my individual fancy.

And now we come to the winch-line. Owing to the delicacy of the angling—the casting from a fly-rod, and with, in good portion, a loose-line—the winch-line plays as important a part in fly-fishing-spinning as it does in fishing in the Nottingham-style, though in quite a different way. And here, at the outset, we have those issues of Hair v. Silk, and Hair v. Silk-and-Hair, and Silk v. Silk and-Hair, and Hair Twisted v. Hair Plaited, and Silk-and-Hair Twisted v. Silk-and-Hair Plaited, with all sorts of cross-issues; and also all sorts of sub-issues or side-issues as to dressings and colourings—rather a long list—standing for judgment. I have followed the controversy on some of them in the Fishing Gazette with much interest, and have marked one episode of it with deep regret.

"They stood aloof, the scars remaining."

Ward, years ago, always used the twisted silk-and-hair lines, undressed. But his fancy-line, nowadays, is an all-hair twisted line, of his own making, tapering from 9 hairs down to 6; in colour, a deep-chesnut, or sorrel. One reason why he prefers an all-hair winch-line, fishing as he does with very fine drawn gut, is its greater elasticity, and therefore the greater strength it practically gives to the fine gut. On such flimsy tackle he played-out that 12 lb. salmon I spoke of in my former article. His experience is every year so extensive, and his angling—after forty years of practice in spinning—is now so perfect, that any opinion of his is, to me, an authority of the very highest order. Still, I have to consider whether for my hands, or for any others less artful than his, all-hair is the best form of line for use in this fishing. Delicate tools call for skilful workmen. I must not forget that I can have an all-silk line very much finer, and even a silk-and-hair one a good deal finer than an all-hair line, and yet as strong as it. And there arise numerous nice or knotty questions of kinking, colour, length of casting, lightness of casting, &c., all or most of which affect an apprentice or a journeyman more or less differently to what they do a master-workman. Let us consider a few of the more important of the points involved in those issues. And first, as regards strength of line. I once introduced an all-hair line to the notice of a very-well-known fly-fisher. His fiat was that the line was fit for nothing, because when he got hung up in the bushes, 'twas always breaking. Now I never could quite understand the force of that objection of his, knowing that he always angles with the most gossamer of gut. And so I said to myself: "What business has he to be always breaking off his winch-line in the bushes, when he is fishing below his all-hair line with gut so superfine? The gut *must* have been the weaker of the two. How was it, then, that it was not the first to break in the bush? Was he doing "angling in all its branches," I wonder? If you are spinning with tackle, the gut of which is weaker, by a good margin, than your all-hair winch-line of six hairs—as you undoubtedly ought to be fishing when you are fly-fishing-spinning for *ordinary* trout—your all-hair winch-line is strong enough under all conceivable *proper* circumstances for your angling. But in spinning for Lea, or Thames, or even Colne, or Test trout? Ah! that is quite another question. They are *not ordinary* trout. They are *crack* trout. All I point out is that your winch-line—whatever be its material—should be *at least* so far stronger than your gut below it, that you can always depend upon the gut breaking first when both are under one and the same strain. And the winch-line may be somewhat stronger still with advantage, so as to resist the other and greater strains which it has from time to time to encounter in the wear and tear of practice. For instance, a line made wholly or partially of silk rots. And you should allow a certain margin for the rotting. Hair does not rot to any appreciable extent, I believe. It is brittle when dry, and should always be wetted before use, and should be kept moist. But an all-hair line is subject to other diminution of strength, as will presently appear. You may break or cut your winch-line by many a bungle in angling, and especially during your early apprenticeship to this art. I have done so more than once or twice this season. Now, an all-hair line does not allow you quite so wide a margin of strength to resist the devil of bad workmanship as other lines do. One great advantage which an all-hair line has, and which in a less degree a silk-and-hair line also possesses, is that in wet weather, or when a heavy mist is rising, or a heavy dew is falling, the line will not cling or stick to the rod as an all-silk line will do, more or less, according to the dressing, thereby checking the cast, cutting the minnow, and causing very considerable physical, if not also moral, inconvenience. The next best line to an all-hair line, in wet or damp, is a silk-and-hair line, dressed in linseed oil, or *pure* copal varnish, or some one of the other hard varnishes used by line-dressers, taking care that the varnish-dressing is not overdone by laying on a heavy surface-enamel, and thus making the line unduly heavy. Again, an all-hair or a silk-and-hair line fishes better hanging over and lying on bushes, or about banks which are overgrown with brambles, thistles, nettles, docks, or other rubbish, as it does not get round them and cling to them so much, owing to its greater stiffness and stoutness. One great disadvantage of an all-hair line is that the ends of the hairs start out and stand up stiffly, impeding the run of the loose-line in the cast. They should be clipped off close every time or every few times before the line is used. Still, they will start out again. Of course, the loss from time to time of those ends, sometimes two or more pretty close together, tends to weaken the line considerably. Twisted-hair winch-lines should, if possible—and surely it is not impossible that they can?—be so made as not to have two or more hairs ending near each other. To lose at any one part of the line three, or even two, hairs out of six is simply to weaken the line by the loss of a half or a third of its original strength. That, in a weak material like hair, is a very great and dangerous loss of strength. And here I must call attention to the fact that this evil occurs far too often—so far as I know invariably—in the all-hair lines which one buys in London tackle-shops, even the best, and—such is my experience—notwithstanding that the line has been made to order at a double price, and in spite of the plainest and strongest written injunctions. I *always* find that at intervals of a yard or two—particularly at the fine end of the line—there comes an inch or so of line in which it is weakened by the loss of one, and often two, hairs. And this goes on for perhaps 8 or 10 yards, till the line becomes so stout or coarse that the loss of even two hairs ceases to be material, or even very noticeable. I find also that all-hair lines are exceedingly uneven in size—a fine bit—then a bit much stouter—then a good deal finer bit—and so on. Those are two of the greatest drawbacks to all-hair winch-lines. And until they are got rid of, the use of such lines by a careful angler is practically prevented. I have broken up line after line—in disgust and indignation—for those reasons. And I know that I am not the only angler who has done so. I suppose "Sprint" finds those lines better made in the North, where they are so much more used? The evil of the starting of the ends of the hairs occurs in a much less degree with a silk-and-hair line, owing to the greater firmness of the texture. And when such a line has been set still firmer by a dressing of linseed oil, or some varnish, the evil becomes a nominal one. I prefer a twisted silk-and-hair line to a plaited one. The plaited ones are never so fine, are far rougher—the surface being less firm—more fluffy, and they become much more ragged in the wear. I doubt whether they would become as firm-set when dressed in oil or varnish as the twisted ones do. A twist is, *per se*, a firmer or stiffer form of line than a plait. The twisted ones may kink a little more than the plaited. But if the twisted ones were "cable-laid," that evil would probably be to a very considerable degree cured. Yet with all their faults I love those lines better than their plaited brethren. A friend of mine in the North—a *hair-man*—(who can fill his trout-basket with the best) says he gives his preference just the other way, to silk-and-hair plaited, because he finds that the twisted silk-and-hair winch-lines throw their twist on to the single-hair casting-line in playing a fish. Oddly enough, I had never found fault with them for doing that to a gut casting-line. And Ward—a *gut-man*—cannot be much troubled by it, or he would use a plaited all-hair winch-line, I presume. I have used the twisted silk-and-hair lines, with gut casting-lines, for many years in fly-fishing, and I have always found their kinking-proclivities principally confined to making themselves in a very great mess indeed on my pulling them violently—on a very taut line—away from some bush or other obstruction in which the fly had caught. But that was a very occasional calamity. And the mischief was remedied in a moment or two. I am strongly inclined to think that a plaited all-hair line—of horse-hair—tapering gradually from 8 stout hairs to 8 very fine ones—half the size of the stout hairs, or still finer—would make a superior line for fly-fishing-spinning. It would, I apprehend, be bound to be even throughout, and it would not, I feel sure, be subject to the end-of-hair-starting-nuisance, to any appreciable extent. But the sweetest of all lines, the *belle-idealle* of a line for fly-fishing or fly-fishing-spinning would be—*maiden-hair*—

"The gowden locks of Anna;"

her back-hair. I will back it against all creation. All the rest is, as 'Arry would say, "'airy nothing" to it. For it would be fine, and light, and long, and smooth, and pliable, and elastic—yet (in the lump) not limp. It would have all the good qualities of horse-hair and none of the bad ones. There is but one thing in creation that I can imagine beating, or having the ghost of a chance of beating it. And what is that? Why, gut drawn as fine as it. But I don't think our gut-drawing is quite as "gossamer" as that yet—is it, Mr. Editor? Still, if gut is now drawn as fine as the finest horse-hair (as I understand you to say it is)* why don't we now make plaited and twisted winch-lines of it, as we do of horse-hair? Eh? Those gut-lines might be made as fine again as the hair-lines, and finer, yet fully as strong. Why does not some enterprising tackle-maker bring them out? The time must be fast coming when they will have to be brought out, I imagine. A four-plait, *Quâ* maiden-hair, "gossamer"-gut winch-line ought to be a good line for our new style of fishing, care, of course, would have to be taken that it had not rotted; through the application of "Auri-comus" or other the concoction in any like "capillary attraction." It may be "gowden," though it might better be dark-auburn; but it must not be as white as a turnip or as red as a carrot. I almost fear

"Lassie wi' the lint-white locks"

would hardly help us. It should—I mean I think it would—be proof against all the blandishments of Jupiter Pluvius, if he came "a courting" it in one of his heaviest aureal April-showers. Would it be better plaited or cable-laidly twisted, I wonder? That is a very nice question. *Cur advisari vult.* Like all good things, it would be apt to come a little costly. But I daresay it could be got at more easily for love than for money. Fancy a lassie, after giving her laddie a goodly lot of her flowing tresses for his fishing-line, being overheard singing:—

"O dear! what can the matter be?
O dear! what can the matter be?
O dear! what can the matter be?
Johnnie's so long at the mere!
He promised to bring me a brace of pink troutlets—
He promised to bring me a brace of pink troutlets—
He promised to bring me a brace of pink troutlets—
He took on my bonnie back-hair!"

What a pretty companion-picture to the

"*Pyrrha? . . . .*
Cui flavam religas comam,
Simplex munditiis?"*

of our old friend Horace—one lady binding-up her back-hair for her lover: the other cutting-off hers for him! The limpness of an all-silk line, when fine, and dressed in oil or any of the ordinary varnishes, often breeds difficulties to which

"The tangles of Neæra's hair,"

under the finger-comb, were trifles. When fishing with such a line, always carry a pin to unpick knots, and—swear not at all! But yet in a bright, hot, airless day—above all, when fishing on such a day over clear, shallow water—a very fine, level (non-tapered) darkly-stained and lightly-dressed Nottingham-silk line, used on a light 10 foot rod, casts *exquisitely*—so smoothly and effectively, making the longest and lightest of casts, and the least visible. Fishing under such conditions I shall probably continue to use such a line, dark-brown in colour, and home-dressed in the stiffest of (uncracking) varnishes which I can discover. Even when only dressed in linseed oil it, under a hot sun, keeps as dry as a bone, and *flies* forth—like Mercury, the Messenger of the Gods, or Azrael, the Angel of Death, or, if you don't like either of those illustrious illustrations, then say, flies out like a flash of forked-lightning—being as smooth as glass—and almost as fine, and as light, and as free from friction as a single stout horse-hair. It puts no weight on the tiny minnow to make a splash in the water, which merely dimples as the little fellow dips below its surface, not with any "header," but in a gentle dive. And its spin is—splendid. How I should like to test that tackle on a certain Hampshire river on a sunny July day; or to do the job with it—by Jove! on those celestial Littlecot-shallows! I will defer to a later article such remarks as (having regard to past and pending experiments) I may have to make on the staining and the dressing of lines. But in favour of my favourite colour I must ask here how much, of the real virtue and value of a great deal of the horse-hair used in roach-fishing does not arise from its being of a dark-chesnut, or sorrel colour? And before our present closure I would add that, though some anglers consider that it makes very little difference what the size and colour of the winch-line may be, so long as the two or three yards of gut below it are fine, I cannot agree with them. How often in a weir, or mill-pool, or other similar place, particularly where your fishing-ground is limited, or the fish are feeding freely, have you not to cast again and again over every part of the water? Surely the continuous showing of a great and shining line, no less than the repeated heavy casting of it, must considerably scare the fish, especially if large and shy. And does not the experience of most of the best anglers bear me out? In a high wind the winch-line must be fairly stout to cast against it, I grant. But it need not be as "'ighly coloured" as the Christmas-cards they sell in the streets to do *that*. Even when seeking for a weighty line to cast against a strong wind, some regard should be had to the ill-effect of a coarse line on the water after the cast. And it must be remembered that there is such a knack as cutting the wind with a fine line; and also that the need of a heavy line for a high wind in half-a-dozen days of the season is no good reason for using such a line every calm day throughout the season. A like remark might be made as to a stiff rod. And now I think I have run out all my intended remarks in this place on the winch-line, and may reel up again.

A. R. I. E. L.

(*To be continued.*)

[We do not think we ever said "as fine as the *finest* horsehair," but the finest horsehair that is used in angling. You could land a troutlet on a woman's hair with care and time; bna who would care to boggle about after troutlets, which could be wipped out at once, uneducated fry.—Ed.]

* "Pyrrha? for whom bind'st thou in wreaths thy golden hair,
Plain in thy neatness?" —Milton's translation.

A WELCOME TO '83.

A welcome to thee,
Eighty-three!
A welcome with rod and with gun;
A welcome to thee,
Eighty-three!
In thy race so newly begun.
We meet thee
With promise and vow,
We greet thee
With evergreen bough,
And halls are resounding with cheer,
To usher thee, happy New Year!

A welcome to thee,
Eighty-three!
Wings over the mountains and dells;
A welcome to thee,
Eighty-three!
Rings out from the merry church bells,
Forgetting
The pain that is gone,
Regretting
The wrong we have done,
Our sorrow we check, and the tear,
To usher thee, happy New Year!

A welcome to thee,
Eighty-three!
A welcome with music and feast;
A welcome to thee,
Eighty-three!
A welcome from greatest and least;
Recalling
The times of neglect,
Forestalling
The good we expect;
With banners outspread we appear,
To usher thee, happy New Year!

Like a cloud in the sky
Will fly by
The days that thou bringest to men;
To those who do right
Shall delight
Repay in full measure again,
Then a welcome to thee,
Eighty-three!
A welcome with rod and with gun,
A welcome to thee,
Eighty-three!
In thy race so newly begun.

Hon. Sec.: J. M. R. Francis, Esq.

Treasurer: W. A. Crump, Esq.

Report of the Committee of the Thames Rights Defence Association.

On the 24th November, 1880, a public meeting was held at Simpson's Tavern, Strand, convened by a circular issued by Mr. Francis Francis, for the purpose of taking some steps to resist encroachments on the rights of the public in the River Thames by riparians or others.

The association was then formed, a chairman chosen, and an honorary secretary appointed, and a committee selected to carry out its objects.

On the 10th January, 1881, a deputation from the committee waited on the Conservators of the Thames, and stated generally the causes of complaint by the public against riparians and others, and inquired if any steps were intended to be taken to prevent their continuance. The Chairman of the Board suggested that the deputation should withdraw and send in writing what they would wish the Conservators to do. Two or three memoranda to the Conservators were subsequently drafted and discussed at great length, and with several adjournments. In the mean time, answers made by the Conservancy Board to references and questions put by the Board of Trade and by the Corporation of London had been made known to the committee, and proved to them that further correspondence with the Conservancy Board was unnecessary, as no assistance in respect to the views and objects of the association could be expected from that quarter, and the matter was therefore allowed to drop. A request was then made to the Local Government and Taxation Committee of the Corporation of London, in whose hands the reply of the Conservancy Board had been placed, for an interview, which was duly afforded, and a deputation from your committee waited on the Local Government Committee at Guildhall on the 8th March, 1881. A statement was made, and a discussion at some length took place, and Mr. Francis requested permission to examine the ancient charters of the City, and he was iustructed to memorialise the Court of Common Council on that head; and the deputation were further advised to get a case and lay it before the Common Council, in order that the Corporation might then decide how best they could assist us. In reference to this matter, your chairman and Mr. Ledger subsequently had an interview with Mr. Deputy Bedford, at the Guildhall, and discussed the matter with him at length, and Mr. Bedford, who was very favourable to the views of the association, expressed himself satisfied and willing in every way to forward their action, and wrote subsequently to your chairman to that effect. A memorial was then drawn up, upon which a good deal of discussion took place, but in the mean time a matter occurred which required the active interference of the association. Sir Roger Palmer, a riparian proprietor, and one of the conservators of the Thames, summoned a fisherman and bailiff, named Gill, for fishing on his private waters in the Thames near Maidenhead. Your committee took this case up, and instructed Mr. Crump, who acted as their honorary legal adviser, to defend it. This was done, and the case was heard at the Maidenhead Court on Tuesday, the 22nd November, 1881. It has been fully reported, and need not be further related; it resulted in Sir Roger Palmer being the loser, and having to pay £7 7s. in costs; it being held that he had no exclusive fishing rights at the spot where Gill was fishing.

Subsequently to this your committee were engaged in watching a case of some importance at Nottingham, in which they gave all the advice and assistance they could, though of course they could take no active part in it.

Mr. Fletcher was threatened with a summons by Mr. Lewis, the prosecutor in the ensuing case, and applied to your committee for assistance, he having to go abroad just then. The committee agreed to take up the case, and Mr. Lewis's solicitor was written to to that effect, but no summons was issued. The prosecutor apparently preferring to deal with private individuals.

Mr. Layard, of 5, Fenchurch Buildings, next applied to your committee for assistance in another case of summons for fishing in the same so-called private waters on the Thames, near Maidenhead, on August 3, 1882. Mr. Lewis, who owns a house and grounds near the bridge, claimed to be proprietor of two eyots situate adjacent, and also of a considerable stretch of the fishing of the river adjoining.

Mr. Layard, being himself a lawyer, was prepared to defend his own case; Mr. Crump, therefore, went over the case carefully with him, pointed out the line of defence to be made, collated and arranged the various documents and authorities bearing on the case and belonging to the association, and placed them in Mr. Layard's hands, and at the same time expressed his belief in the willingness of the Association to bear a portion of the cost of the case if it were required.

The case was heard before the Maidenhead Bench on September 4 last, and resulted in the complete success of Mr. Layard; it being held that the prosecutor had failed to prove that he had an exclusive right on the portion of the river which he laid claim to. Mr. Lewis thereupon asked for a case for appeal, which was granted. Mr. Layard, on receipt of notice to appear to the case, has applied for aid and assistance to the Corporation of the City of London, and it has, on Mr. Bedford's motion, agreed to support the respondent. This action on the part of the Corporation, following immediately on the display of a banner in the Lord Mayor's Show on behalf of the rights of the Thames anglers, along with those of Burnham Beeches and Epping Forest, is fraught with the happiest presages for the future, and relieves your committee of serious apprehension and misgiving, knowing as they do the strong opposition they would have to meet in any legal appeal; as they feel that the Corporation are hardly likely, having once put their hands to the plough, to draw back until they have fully completed the work. Your committee have great satistaction in congratulating the association on the complete success of its efforts, and the maintenance of the public right of fishing in the Thames in the only two cases which have arisen since your association was called into existence. They undoubtedly have proved a heavy blow and a great discouragement to persons who were, before the establishment of this association, fabricating claims to exclusive rights from one end of the river to the other. Other claims, too, since then which were partially enforced (on those who submitted to them) have since been abandoned.

Advertisements have been judiciously published, and cards setting forth the objects of this association have been widely distributed along the valley of the Thames, and everything that could be suggested to induce an interest in the cause advocated by the association has been done. The success so far has been fully adequate to the means, but should any prolonged litigation take place hereafter, as a matter of course much larger assistance would be needed.

The accounts of the committee are open to the inspection of any subscriber upon application to the honorary secretary, at the office of the association, No 11, Old Jewry Chambers, or to the treasurer, at 10, Philpot Lane.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

RIVER REPORTS.

MID-THAMES.

Angling in the above 160 miles of Father Thames has during the past week been conspicuous by its absence, and all-round fishing seems to have been utterly deserted for all "round of beef" and other concomitant luxuries. At Hurley, Bray, and Maidenhead, a few braves have ventured out, but the tot-up when the shades of evening closed o'er them was small indeed, if not "beautifully less." It seems hard lines, at the close of such an eventful year, to have to report nothing (as the Irishman might say); but "I lives in hopes" the ensuing year will astonish the "natives," in punt and on bank, and give plenty of occupation for "Marlow Buzz." By the bye, I noticice a "'query for 'Marlow Buzz'" in last week's GAZETTE. I am at present suffering from a plethora—not of news, but of plum-pudding, which weighs heavily on my chest, stomach, and mind, seems to increase my girt and add to my length from gills to fork of tail, and so jumbles up weights and measures that I must ask your correspondent, Mr. Ransome, to kindly wait until next year for an answer. Weights of fish, waits of music, and waits for cash just now utterly confuse yours obediently—"with the compliments of the season,"—MARLOW BUZZ.

Bure (Norwich).

As far as I can ascertain no one has been doing anything at the numerous stations on this stream for some time past; the reason can easily be found in the flooded state of the river, and the constant rains and storms which have lately prevailed. I had hoped a week ago for some jack fishing on this river, but Christmas morning broke thick, foggy, and soon a settled mist obscured the view in all directions. Anglers who had arranged (as I had for next day) looked glum and spoke not. Boxing Day commenced no better, but it cleared up after eleven, and myself and a friend drove over to Horning Ferry to see our much respected Host Thompson; we called on our way at Jimpson's, Hoveton "King's Head," and their learned that a local fisherman named "Mathew," well-known in this district, caught a nice lot of little jack, some ten or a dozen, in number, but none over 4lbs., and three were taken on Boxing Day in private water, the largest scaling 12lbs. My notes for the year 1882 with regard to the Bure, convince me that the river is teeming with fish, but the size is of such dimensions as hardly any angler would care to show. Exceptions to this rule have occurred here and there; but for a good catch of large bream you must bait the ground over night on Wroxham Broad, and commence angling at daybreak. I hope many of the London subscribers to the FISHING GAZETTE will become subscribers to the "Bure Preservation Society," whose efforts every angler on the stream ought to help by annual donation or subscription.

ROBERT MOLL.

Chichester.

Small results have resulted generally from the great preparations made by piscators for the Christmas holidays. Jupiter Pluvius resumed his reign on Christmas morning, and has been busy since. The country a mass of slub, and rivers in high flood of the consistency of pea soup. Mr. Young, who made Selham the venue of operations, was rewarded with some good roach. I journeyed to Petworth on Tuesday, fishing the Rother; a small pike taken with spoon was the extent of the basket, three London rodsters returning fishless, and yet a likely day for pike; but, as a disappointed rodster remarked, "It was all howing to the helements." At the Canal, Chichester, some members of the Portsmouth Waltonians landed some good roach, and a small pike taken on a roach line. Bream are getting cunning, nocturnal fishing the only way of capture; some good fish having been taken the past week. Mr. L. L. Lane took with him on Saturday twenty-seven nice bream in the Society's bait can to Thame, in Oxfordshire, where all but two arrived safely, and were placed in Dr. Lee's waters, the Dr. returning Mr. Lane a cordial vote of thanks for the same. And now, ("Old lamps for new ones!") what society will exchange chub for bream? We shall be glad to stock our water with chub, and will return some of the bream for which our canal has long been famous.—GEORGE F. SALTER.

Derwent (Chatsworth).

Owing to the continuous rain in the beginning of this week, the river is quite bank full, and fishing prospects are out of the question for some time now. To-day (Thursday) the weather is somewhat better—the atmosphere is very mild, the temperature being quite 50 degs., which is a great change from the weather of a fortnight ago. If the weather should keep fine and dry, it will be some time before the water has materially subsided to be again in fishable order after such a heavy flood.—WHEATSHEAF HOTEL.

Dove.

We have had a green Christmas, and I, for one, greatly prefer it to a white one. Notwithstanding all the much talked-of and written-about beauty of the snow, I look upon it as an intolerable nuisance, and after the heavy fall we had three weeks ago, I confess to the hope that we shall have no more of it this side Christmas next. We have had out a moderate number of rodsters during the holidays, despite considerable wet, and I am glad to be able to report that nearly all kinds of fish have been well on the feed. Each day there has been a fair rise of grayling on the river, and though the river was very high, some nice samples were killed on Tuesday and Wednesday, with the winter duns on the stills and backwaters. The worm and maggot fishers have, however, been doing best amongst roach, bream, perch, dace and chub. These fish were found freely on the feed wherever they could be got at. To-day (Thursday) the river is becoming quite unfishable. A good deal of water is already out in the meadows, and owing to the great quantity of rain that has fallen in the Peak district I am afraid it will be several days before sport can be resumed.—THE SPLODGER.

Exe (Exeter).

Since my last report, we have experienced a severe frost, one day's good skating being the outcome of the change. The last few days have been very wet, and the river high and much coloured, so that empty creels have been the order of the day. No doubt, with the Christmas holidays, pike and perch fishers will try their luck, when I hope fine weather and large takes will add to the anglers' delight, whom, one and all, I wish a merry Christmas and a happy New Year, especially our worthy editors.—J. A KELLY.

[Received too late for last week.—ED.]

Grand Junction Canal (Boxmoor.)

The weather has been very favourable for fishing, and there have been some very good catches in the canal. Mr. Harris, from London, stopping at my house, caught 12lb. of perch, six fish at 2lb., and I caught a jack of 5lb. Bait for perch, red-worm; jack, small roach.—R. COMBER.

[Rather an even catch that—six perch of 2lbs. each! Eh, Mr. C.?—ED.]

Lea (Ware).

River very high and thick, and seems likely to continue for some days—consequently a poor look-out for "brethren of the rod." Mr. Hall and self have obtained some good roach and dace during the week in the "Manifold." I think it a pity that this water (the Manifold) cannot be fished by our London brethren when the river here is unfishable, as excellent sport is generally obtainable therein when the river is so high and discoloured.—JAMES H. F. EARLL.

Leicester.

During the latter part of last week the weather was exceedingly fine, and with the waters in capital condition for angling, a large number of rodsters, having left work, made their way to the water-side, and up to Saturday some good baskets of roach and perch were taken; Mr. Stafford and Mr. Bird especially showing some capital roach, and in both these baskets were a number of roach that would weigh close upon a pound. Unfortunately, the rain came down most persistently on Monday, and continued almost without intermission up to Wednesday night, and as a consequence the waters became greatly discoloured and floods out everywhere, so that angling was again out of the question. At Aylestone the last few days of the past week some good sport was had, and the subscribers to these waters showed up in large numbers, and, upon the whole, had no cause to complain, as most of the fish seemed well on the feed. From Barrow-on-Soar, with the exception of a few out pike fishing, but little was done. To-day (Thursday) we have had another change, the weather being almost spring like; but in consequence of the floods, it will be some few days before anglers are again able to resume operations.—ALERT.

Ouse and Ivel (Blunham).

Since the late rain the water runs rather thick; but if the weather keeps fine it will be in good condition by Friday.—E.P.

Ouse (St. Ives).

This river is again flooded, and the water as thick as pea-soup.—WM. ADAMS.

Thames (Goring).

Water now very thick and rising fast; every prospect of another flood. Sport during past week—I have had one day since my last report, Monday, a few good roach and perch. Water here Sunday and Monday was in good order for jack and perch. Fishing prospects now look bad for some time to come unless better weather.—JOHN RUSH.

Thames (Oxford).

My prognostication anent the rising of the Cherwell was not fully verified until this morning, but to-day both rivers are out over the meadows and coming down a thick pea-soupy colour, so that at least for a few days the rods will have to lie *perdu*, and the disconsolate angler curse the adverse fates which combine to spoil his sport. Friday was a good day for roaching, Mr. Stephen Davis, ("do you know him, ye Birminghamites?") had twelve splendid roach weighing 10 lbs., the biggest turning the scale at 1¼ lb. Saturday was a fatal day for the unfortunate jacks who have come down the Cherwell with the recent floods, and also the roach and perch at Botley Mill Stream, a bye of the Thames. In the former river Mr. Davis had three jack, weighing respectively 9 lb. 3 oz, 3½ lb., and 1¼ lb. He was rather unfortunate at beginning. The first he hooked slipped off as he was being drawn up the bank; the second, the 9-pounder, bit the gimp, but in about ten minutes he fed again; this time the ferrule of the bottom joint opened; but not discouraged at his former mishaps, Master Stephen grasped the rod at her rupture, played his fish for about 2½ minutes, and at the expiration of that time succeeded in slipping the gaff under his gills, and the beauty was safely grassed, the broken hooks being found fixed in the roof of his mouth. Soon after the others followed their big brother, and Mr. Davis returned to the bosom of his wife and family well contented with his good fortune. Higher up Mr. Chas. Harman lost a big one just below the Victoria Ferry, and a little further on landed one of 3 lbs. In the Mill Stream Mr. Harry Brown had 14 lbs. of roach and perch. On Tuesday I was invited by Pickard Hall, Esq., to try my hand against a big Esox lucius, who has resided in the Clarendon Press fountain for several years. He succeeded in abstracting one of my baits whilst I was absent at the porter's lodge in quest of a light for my pipe, for fishing without giving up a burnt offering, is about as jolly as living with your mother-in-law. Some of my much-worried readers will agree with me there; however, my lack of sport was fully compensated by the opportunity I had of watching the motions of a gull and a coot, who live together in the gardens. To day I received a visit from Mr. L. L. Lane, of the Chichester Society, a gentleman who kindly sent the Oxford Angling Society his copy of rules at their first formation, but the flooded state of the river precluded all chance of fishing. The New Year is at hand—may it prove to you, Mr. Editor, and all your readers, a happy and a prosperous one.—CHERWELL OTTER.

Trent (Newark).

By last Sunday the water had fined down very nicely, although it was running at a great height; still, we thought that slack corners, &c., &c., away from the main stream, would be productive of sport, and preparations were made accordingly for a bit of roach-fishing—gentles were got out of the damp sand in the old tub, ground bait prepared tackle made up, &c., &c., and Christmas morning found us by the river's side, eagerly scanning a promising-looking swim or two; but alas! a very heavy rain fell, and continued all Christmas day, so that by Tuesday night the river was running bank full and very thick. I had an interview with the old Trent, this afternoon, but he was in a very bad humour and his bed was not big enough for him, so he had gone on a voyage of discovery all over the field—in short, a very heavy flood is now the state of affairs.—THE TRENT OTTER.

Trent (Nottingham).

The river has run down rapidly, and was on Thursday week in capital condition for bottom fishing. A large number of anglers have been out, and in the upper reaches a splendid lot of dace, roach, and chub were killed on Wednesday with maggots and worms. One of the roach weighed 1 lb. 5¾ oz., whilst the largest chub turned the scale at 2 lb. 8¼ oz. Several very nice bream have been bagged at Sawley, which in a rise generally yields plenty of fish to the subscribers. Lamprey fishing has been splendid, upwards of two thousand fish having been caught by the keeper at King's Mills weirs. The other weirs below have also turned out large quantities.—THE MAN AT THE CLUBS.

The Trent in this district was in splendid condition for bottom fishing in the early part of the week, and being the holidays a large number of anglers went downwards. Some nice lots of dace and roach were got with the cockspur worm, and a few bream were taken with the maggot. One of the roach weighed 1 lb. 5¾ ounces, whilst seven others averaged 1 lb. each.—On Wednesday and Thursday, through heavy rains, the water came on rapidly, and those who went out were much disappointed in the state of the river. There have been plenty of pike killed with live bait in the private lakes in the neighbourhood, one turning the scale at 18½ lbs.—THE MAN AT THE CLUBS.

The Yare.

The record for 1882 on this stream, as far as my experience goes, will not bear comparison with the last year or two—I mean with regard to size; number, I think, has been equal or more, but I never remember a season when I and my friends have caught so very many small roach on the Yare. I only allude to this as an uncommon thing, for I can bear testimony to the catches of splendid roach that have been taken nearly every month by Norwich anglers. Some trays have been shown, containing fifty, or sixty, which would have made any Lea roacher or a brother from any stream anxious of emulation on our favourite deep, swift-running Yare, than which I doubt if one exists that could produce finer roach, or one to give the angler better sport, as the depth increases the difficulty of catching and also of killing them. I refer more particularly to those who, like myself, fish with a tight line. Our stock of fish of all kinds have, thanks to the efforts of the Yare Preservation Society, increased, and is still increasing year by year, as is proved by the catches of bream, roach, perch, jack, &c., taken. Now, a word to my brother anglers of London who visit Norfolk waters. I submit a list of contributions contained in the collecting-boxes at the various stations—Reedham, 1s. 3d.; Cantley, 5d.; Buckenham, 18s. (of which 5s. was subscribed by Mr. R. Hawkins, Seymour Arms, Seymour Street, Euston Square, and whom I would advise to become an annual subscriber, as he would have several advantages by so doing); Surlingham Ferry, 1s.; Thorpe, 8d. I hope, should I be your correspondent next year, to report a different result to the foregoing; and should any gentleman feel conscience-stricken, the address of the honorary secretary is Mr. C. J. Greene, London Street, Norwich. Owing to the unsettled state of the weather since Christmas morning, no catches have been made, and there are no prospects of good sport at present, as the marshes are flooded and the water is thick. Atmosphere in the room I am writing in, with no fire, over 70.—ROBERT MOLL.

Witham (Boston).

What bid fair to be a rare time for sport during the Christmas holidays turned out the very reverse, and the hopes of many of getting amongst the pike were rudely dispelled at the very moment of realisation. Friday and Saturday were all that could be desired; but on Sunday came a sharp frost, which partially covered most of the drains with ice, and sent the fish to warmer quarters. Christmas day was of the worst description. Rain came freely, with some wind, and the state of things was about as bad as possible. More rain on Tuesday and Wednesday, and the anglers were, to a man, thoroughly disappointed. Many strangers came down this (Thursday) morning, but from what is apparent their journey has not benefitted any of them so far. But, as a rule, anglers are used to such things, and are content with a grumble. The regular angling contingent, as it may be called, however, had the fortune to secure sport when it offered, and since my last I have heard of some fairly good takes of pike, perch, roach, &c., principally before Sunday last. On Friday, for instance, some anglers did pretty well at Sibsey, and near the Northlands Bridge Mr. West caught several pike running up to nearly 6 lb., and at Cherry Corner there were some taken, the best about 6 lb. also. At Swineshead and about the pumping engine others were caught, as well as a few perch at the latter. There were also some good roach takes on the forty-foot made by Mr. Wakefield, Mr. Day, &c., on Saturday. Prospects for the coming week are anything but rosy, but there is an improvement to-day (Thursday), and, after all, the holidays might be productive; the chances, however, are that they will not be.—THE YELLOW BELLY.

Wye and Derwent.

The Christmas holiday piscators have been quite disappointed this Christmas, as both rivers have had large floods on them since Monday, and no fishing has been had, only by the clench net fraternity, who have killed a good lot of fish with their nets while the Derwent was in flood. Both on Friday and Saturday, and also on Christmas Day, a very fair quantity of grayling, roach, and dace were killed on various parts of the Derwent, chiefly with cockspur worms. The continued heavy rain which has fallen since October has kept a very great deal of company away from visiting and enjoying both scenery and fishing. I know a great many gentlemen that have scarcely killed a good dish of good grayling this autumn with the artificial fly, owing to the rivers being sadly too high for successful grayling fly-fishing. The lower the river is the better it is for grayling fishing; in fact, the last autumn fishing is the very worst I ever knew, in all my life, as a practical fisherman. I have noticed, this last season especially, that there is not half the quantity of duns frequenting either the Wye or Derwent that there used to be; not even March browns, lame flies and spiders appear more abundant—in fact, there is a quantity of flies that have quite forsaken these rivers. I quite agree with Francis Francis's ideas in the F. G. of last week respecting the changing of the breeds of trout, &c. I have remarked it years and years ago, both in the *Field* and the FISHING GAZETTE, that the breeds of both trout and grayling want changing both in the Wye and Derwent, and that fish-hatching wants carrying on to a greater extent. If these things are only carried out we shall have first-class fishing again in Derbyshire, the same as we used to do twenty years ago. I wish all true disciples of the angle a better fishing season next year than the past has been.—GEO. JAS. EATON.

Yore (Hawes).

A splendid thaw set in on Saturday week, and has continued until now, when the river is full of snow-broth, and is likely to be so for the next few days. I do not hear of anything being done for a week back. I was speaking the other day to one of the best of our local rodsters with respect to grayling taking the minnow, and he informed me that on more than one occasion he has known them to take it most voraciously. I find the she-fish I have taken this last six weeks back have been full of spawn, but, of course, not anything like matured. I cannot assist Mr. Walbran to account for this in any other way than that the last summer has been a very congenial one for the fish; they have had plenty of feed, and are, therefore, more forward than usual. How is it you will sometimes get a trout early in spring with a large amount of spawn in it? Might I say I think all the fish do not spawn at the same season? Trout is said to be decreasing in the Yore, whilst the grayling is rapidly increasing. I think the reason is not far to seek. Grayling are comparatively little sought after; trout are beset on every hand. During the heavy floods the "cowl net" (*sic*) does no end of mischief, whilst when the waters are low the drag net works wholesale destruction. Where trout and grayling congregate the speckled one has to take a subordinate position, owing to the pugnacious disposition of the armour-clad gentleman. I have taken trout full of grayling spawn in the months of May and June. One of our locals has taken twenty brace this season with a single hair stinting. He is a most careful angler, and never uses gut except in a heavy water or when trolling for trout. I am going to the other side of the Penines next week, and will perhaps be able to send you a few notes as to the kind of season the piscators of Ingleton Dale have had.—JOS. CORRY.

CLUB REPORTS.

BERMONDSEY BROTHERS ANGLING CLUB.

The members were saved a blank on Sunday by Mr. Godfrey with roach from Pangbourne. The half yearly meeting of the club will take place on Thursday next, when all members are requested to attend. A member of this club, fishing at Pangbourne a few weeks ago, lost the bottom joint of his rod, which has been given to a London angler. Will the person please communicate with the secretary of the above club at the Alscot Arms, Alscot Road, Bermondsey?—A. G. CROKER, secretary.

BRIGHTON ANGLERS' ASSOCIATION.

On Tuesday, being Boxing Day, the members of the above club had their first competition in the river Ouse, at the beautiful village of Barcombe. The following are the sportsmen that faced the heavy rain and thick water:—Messrs. Noah Clark, W. H. Clark, W. Smith, Sharp, Saunders, Cardy, Hassell, Artis, Wm. Saunder, Foord, Tomkins, and Noble. The water being thick, and a strong south-west wind blowing, proved to be very much against the spinner, so that the live-bait fishermen had the best of it. Mr. Noah Clark took one jack 9 lb. 5¾ oz., and one weighing 2 lb., which secured the first prize, value £1. The second prize, value 15s., was not taken. Mr. Noble had good sport with a jack; but on landing him it proved he was born too recently to be any good. The winner at the weighing-in was applauded. Wind, W.S.W.; full of rain.—LIVE SNAP.

Dec. 28.

CAVENDISH ANGLING SOCIETY.

A distribution of prizes of the above society took place on Thursday, the 21st, when a great number of members put in an appearance. The annual supper is arranged for the 4th January, and several valuable prizes will be fished for at Rickmansworth on the following Sunday.—E. CHAMBERS.

HAMMERSMITH UNITED ANGLING SOCIETY.

On Sunday, the 17th, Mr. Pitts had a good show of roach and perch from Henley. Mr. Lewis had dace from Kew on the 20th, and also on the 21st. Some members the same day competed for a guinea, given by Mr. Green, and Mr. Aldridge took it with 8 roach weighing 3 lb., Mr. Walters being the only other to weigh in. On the 26th, Mr. Peachey had dace from Richmond; Mr. Reynolds, perch from Cowly Broad; and Mr. Pitts, roach from Henley.—ARGUS.

UNITED LONDON ANGLERS.

Mr. J. P. Coote, of Royston House, adjoining the Rye House Railway Station, has been appointed local bailiff by the Lea Conservancy Board for the upper district of the river Lea. The stretch of water in the navigation stream from the bridge below King's Weir Lock to Aqueduct Lock is now included in the free water. The usual monthly meeting will take place on Monday evening next, January 1st, 1883, at nine o'clock, Mr. S. Morgan, chairman.—R. GHURNEY, sec.

Dec. 27.

THE UNITED LONDON ANGLERS' CENTRAL COMMITTEE.

INCOME—1064 privilege tickets at 1s., £53 4s.; 1064 fishery tickets at 1s., £53 4s.; other items, £13 17s. 0½d.; balance last audit, £6 13s. 11½d.; in bank last audit, £79 12s. 2d.; total, £206 11s. 2d.

EXPENDITURE—Lettering cases, £1 11s. 4d.; printing, £10 3s. 6d.; stamps, £2 2s. 10½d.; secretary's salary half-year, £12 10s.; chairman's salary half-year, £2 2s.; auditor's, 7s. 6d.; trustees drawing from bank, 2s.; Thames Preservation grant, £5 5s.; 28 dozen cases for tickets, at 4s. 6d. per dozen, £6 6s.; stationery, 12s. 1d.; paid to Fishery Society, £50; for watching river, convictions, bailiffs' salaries, &c., £14 1s. 4d.; cash in hand, £7 15s. 4½d.; cash in P.O. Savings Bank, £93 12s. 2d.; total, £206 11s. 2d.

TOTAL VALUE OF STOCK.—Cash in bank, £93 12s. 2d.: cash in hand, £7 15s. 4½d.; 600 instruction cards, £1 7s.; 400 privilege cards, 16s.; 14 lettered cases, 7s. 7d.; 104 plain cases, £1 19s.; total, £105 17s. 1½d. Trustees, J. T. Cundall and G. Manning; chairman, Mr. S. Morgan; secretary, Mr. R. Ghurney; auditors, J. G. Baglee, W. High, and M. Dymond.

STRAWSON'S WATERPROOF.

"I HAVE always said (and always asserted in my books) my belief that your waterproofing is the *best in the world* for sporting purposes, and indeed the only one which will keep out melting snow." This is the opinion of one of the best anglers and angling writers living, Mr. H. Cholmondeley Pennell, on Strawson's Waterproof, and it is an opinion which every angler who has tried the preparation willingly endorses. Some time ago we sent a sample of it to an angling friend in the West of England to get his opinion on it. He wrote back at once to say that if the waterproof was the same as the "original Strawson," there was no necessity to try it, for its value was too well known by sportsmen in the West of England to need any further testimonials in its favour. Mr. John Blakey, of Leeds, in reply to a question we put on this point, assured us that he had bought the right to manufacture the original article from Strawson, so that there is no doubt about the genuineness of the article. A great feature in this preparation is that, while rendering the leather impervious to dew, rain, snow, and sea-water, it does not make it hard as do some waterproofing compositions. Another friend writes: "I have used it myself over fifteen years, for the purpose of dressing all kinds of leather, and found it the best thing to dress my long boots with before going shooting or fishing. For wading, however, I always use rubber waders with thick felt soles —the felt, by the bye, acts splendidly in preventing your slipping on slimy rock. I once walked up the middle of a rocky waterfall with them on." If the North British Rubber Company would make their rubber wading-boots with thick felt soles, they would be the very perfection of waders for the angler.

CLUB AND OTHER JOTTINGS.

By L. B.

The usual monthly meeting of the West Central Association of London and Provincial Angling Societies took place on Friday evening, the 15th, at the Portman Arms, Great Quebec Street, Baker Street. Mr. Beckett occupied the chair, Mr. Field the vice-chair, Mr. L. Bouvoisin officiating as secretary in the absence of Mr. T. Hoole, who, I regret to say, is still confined to his bed.

After the reading and confirming of the minutes of the previous meeting, Mr. Adeane proposed, and Mr. Bates seconded, a proposition to the effect that the action taken by the officers of the West Central Association, in conjunction with those of the other associations, in countermanding the meeting at the Forester's Hall on December 6th under existing circumstances, is heartily approved of, was unanimously carried. The enrolment of the Grafton Piscatorial by the committee was then confirmed. Upon a proposition by Mr. Crumplen, seconded by Mr. Reynolds, a new society, viz, the South-Eastern, holding its meetings at the Prince Arthur, Stamford Street, S.E., secretary, our old friend Mr. Copeland, was unanimously enrolled.

Upon a proposition by Mr. Jennings, seconded by Mr. Avon, a reward of £1 1s. was voted to police-constable Crook for a very useful conviction obtained against certain persons for illegal possession of fish in the neighbourhood of Cowley, near Uxbridge so long ago as last August, the matter having been adjourned for the furnishing of sufficient particulars.

Mr. Bates next proposed, and Mr. Thomas Crumplen seconded, that another letter be sent to the Central Association, Star and Garter, St. Martin's Lane, cordially inviting them to send representatives to all meetings of the West Central Association, which was unanimously agreed to.

The roll was then called by the sec. pro tem., eighteen clubs being represented, viz., Bostonian, City of London, Cambridge Friendly, Duke of Norfolk, Good Intent, Gresham, Hammersmith Club, Hammersmith United, North-Western, Prince of Wales Piscatorial, Queen's, South London, St. John's Wood Piscatorial, Westbourne Park Piscatorial, South-Eastern, Grafton Piscatorial, and the Rodney, Mr. Chambers representing the East Central Committee, a hearty vote of thanks to the chairman, vice-chairman, and sec. pro tem., bringing the meeting to a close.

The North-Western Angling Club have voted £2 2s. from the club funds to the Thames Rights Defence Association, and a like amount to the Thames Angling Preservation Society.

At a recent meeting, where above a score of angling clubs were represented, the well-known secretary of a well-known club denounced the present prize system as "the great bane of angling societies," and several representatives present approved of the remark. The question thus opened up is a very broad one: much can be said against it, and probably more in favour of it. In the end, however, most unbiassed persons will arrive at the conclusion that there is nothing contrary to the true spirit of sport in the giving and taking of a few prizes; but that the thing can be carried to excess is undeniable, as, indeed, can almost every other thing—good in itself—originally intended for man's enjoyment. The foregoing remarks naturally lead one to ask a little more about this system of prize giving and taking. There are in London and suburbs nearly 200 angling clubs; a proportion of the prizes competed for in almost any angling club is paid for from the funds of the society, the remainder being presented by individual members. These prizes in several cases represent an annual money value of upwards of £100; while even in the humblest society it would rarely sink below £10 or £15. Taking, however, the average as £30,—which, speaking from long experience and with a number of books of rules and prize lists by me to refer to, I believe to be exceedingly fair, we arrive at a total money value of £6000. This is a large sum, and represents a heavy weight of fish taken from our rivers, probably far more than mere casual readers would believe, as I had occasion to clearly prove in the pages of the GAZETTE some months ago. Now, what one is tempted to ask is—do these prize winners assist in replenishing the rivers to anything like the extent they assist to deplenish it? I would the answer could truly be given in the affirmative. We have the Thames Angling Preservation Society, the Upper Thames Preservation Society, the Thames Rights Defence Society, all sadly hampered for want of the support they so well deserve. Mr. Editor and kind readers, would it be too much to ask these prize winners to voluntarily contribute, say, 5 per cent. on the money value of their prizes, and allow the £300 thus raised to be distributed in fair proportion among the above societies and one or two kindred bodies. Would not such a step be going a long way in the direction of removing the stigma so frequently laid at their door that they, in all but exceptional cases, utterly refuse to support those who ungrudgingly lavish time and money, and sometimes health, to increase, maintain, or defend the interests of angling? I sometimes think our club friends don't fully realise the use of preservation societies. Let them ask themselves, if these societies ceased to exist to-morrow, if poachers and polluters were unchecked, if riparians were unopposed, &c., in two or three years' time, what use would we have for our rods? And could we show cause why Betsy Jane should not chop up "them rubbishing old rods" to light the kitchen fire with? Probably these and kindred questions will be dealt with when readings become more firmly established among angling societies, and I anticipate much good will come of it. I believe there are hundreds of homely chub anglers who would readily support deserving institutions if the necessity for so doing were clearly defined and brought home to them.

In answer to "Renrut," I have caught heavier fish, particularly roach and rudd, with straw or wood cads than I have with any other bait. I first used them in Belgium, about fourteen years ago, while fishing in a fine Grand Junction Canal, navigable to three-masted seagoing ships of good tonnage. I was staying at the little village of Thildouck, some miles from Louvain; it was in January, and very cold. I had been fishing all day, and my brandlings and paste had failed to secure me a bag, or, indeed, anything except a few small perch. As dusk was coming on, I came across a Louvain angler: with him I got into conversation, of a kind—French, Flemish, English, and pantomime on my side, and Flemish, *pur et simple* on his. However, he made me understand by throwing my lump of paste into the water that that was no good, and replaced the worm on my hook by a cad; moreover, giving me a small supply of these interesting insects, with every one of which I secured a fish. My good-natured host, who was not a fisherman himself, when I explained to him what I wanted, armed with a rake, soon showed me how to secure a supply from the bottom of the canal and among the rush roots, and many and many were the heavy bags of roach and half-bred (bream roach) I have secured with this killing bait. When the fence months were over, and the summer season began, I went in search of my friends—the cads—in their old home at the bottom of the canal, but soon found they were not there; plenty of empty cases but no caddis. Many of them had turned to flies, and the few I found were on the top of the water attached to floating bunches of weeds, &c., and far too advanced in the stage of transition towards the perfect insect to be of any use. I, however, found some in a running water close by, but they were not nearly so bright or big as my old friends in the still water. I have fished with cads since in England—among other places at West Drayton, and in the Grand Junction Canal, and have taken good fish with them. I believe, with your correspondent, that good roach can be had with cads, and, I would add, blood-worms, when other baits utterly fail. Unfortunately, cads are not always easily procurable; blood-worms are exceedingly difficult to put on artistically, and say, "Renrut," Don't the minnows and sticklebacks come at them? It's worse than gentles, inasmuch as both the cad and blood-worm are far tenderer than a well-scoured gentle.

I am glad to say that Mr. T. Hoole is much better, and his medical attendant states he will be able to resume active work by, or shortly after, New Year's Day.

LARKHALL ANGLING SOCIETY.

THE third smoking concert of the season took place in the club room at "The Larkhall," Larkhall Lane, Clapham, on Wednesday evening, December 20, which was largely attended by the members and friends. Mr. G. F. Spencer occupied the chair, and Mr. B. Boyce the vice-chair. Amongst those present were Mr. W. H. Brougham, Mr. E. M. Mallett (secretary), Mr. W. Tucker, Mr. Davidson, Mr. J. H. Morris, (treasurer), and Mr. E. Dangerfield. The room was appropriately decorated for the festive season, and numerous mottoes were placed on the walls. This being the first appearance of Mr. G. F. Spencer, after an absence of a fortnight through indisposition, his presence was most cordially greeted by the members. These concerts are always made attractive on account of the great musical talent that is introduced, and they are conducted in good style by the president, each piece following in rapid succession. Mr. J. Halle, formerly of the Westminster Aquarium, opened the Concert on this occasion with the "Maid of Orleans" march, which he performed in good style, and displayed great ability in accompanying the various songs. Mr. Lockwood Hanadine, who possesses a splendid baritone voice, sang during the evening "The King of the Company," "The Brave Old Temeraire," and Torreadors' song from "Carmen," all of which were loudly applauded. Mr. J. Lovett, who is another great favourite at these concerts, has a fine tenor voice, and sang in very good style "Mignonette," "Ehren on the Rhine," and "Killarney," and the duet of "The Soldier and the Sailor," which was sung by these two gentlemen, was greatly admired, as also was "Excelsior." Mr. E. Branscombe, who has a very sweet tenor voice, was rapturously encored in "My Little Sweetheart," and "Tell her I love her so," but the rules of these Concerts is not to have encores, as the vocalists appear in other parts of the evening. Mr. T. Craven gave an excellent recitation "The Stowaway," which was thoroughly appreciated. Mr. Bishop, who is a very clever comic singer and extremely popular, sang with great effect "I'll make him suffer," "Rather too old for me," "Full inside," "Rip Chip Chip, Mary" and three others. Mr. F. C. Everill, who is also very good, highly entertained those present with "The picture of my Dad," "Treacle," and "An Awful Little Scrub." Mr. W. Spencer sang a very appreciative comic song "I'veCaught the Speaker's Eye." The following gentlemen in the course of the evening sang with good taste and spirit:—Mr. Carman, Mr. Renant, Mr. Pistroni, Mr. Harris, and Mr. Moncrieff. Between the parts Mr. G. F. Spencer expressed the gratification they all felt at being honoured with the presence of Mr. W. H. Brougham, and he was sure they would be glad to hear a few words from that gentleman. Mr. Brougham, on rising, received a hearty greeting, and assured those present it was always a pleasure for him to visit the Larkhall Anglers, whether in the club room on those occasions or at their annual dinner at Mouflet's Hotel in Newgate Street. He felt the latter was more adapted for speech-making than the Smoking Concerts, where the voice was specially required for musical harmony. In referring to the five tons weight of fish that had this year been turned into the river, he remarked they were all big fish, and there was scarcely one so small as could be designated one of "Brougham's Babies." In the Sunbury district, if they had witnessed the putting in of large quantities of big perch, he was sure some of them would go there and endeavour to obtain the prize of a perch rod he had offered them for the three best specimen perch. In conclusion, Mr. Brougham wished them one and all the best compliments of the season and heartily thanked them for their warm reception. At the conclusion of the Concert, a cordial vote of thanks was accorded to the chairman. Mr. G. F. Spencer, in reply, heartily thanked the members for their kindness, but stated the success of the evening was due solely to the great exertions of their honorary secretary, Mr. E. M. Mallett, and it gave him very great pleasure to propose that gentleman's health, which was responded to with great acclamation. Mr. E. M. Mallett, in well chosen words, briefly returned thanks. It is worthy of remark there has been a large increase of members this year. The club is altogether in a very prosperous condition. Some extensive improvements are shortly to be made, including the enlargement of the club room, and Mr. J. H. Morris, the proprietor, is most attentive and courteous on all occasions. The most successful Concert yet given under the management of the society was brought to a termination by the singing of "Auld Lang Syne" and the National Anthem.

B.

THE GRESHAM ANGLING SOCIETY.

THE excellent concert, for such it was, given by this great City society on Tuesday of last week deserves a word or two more than our space would then afford. Several members of the Bell Musical Society kindly gave their aid, Mr. C. E. Aveling, a member of the Gresham, arranging the programme, and selling Mr. Crumplen's "Welcome, Anglers" with great force and feeling; Mr. Elwin, a favourite in musical circles, also giving his valuable services. Mr. Winterbottom, whose talent is so frequently at the disposal of his brother anglers, gave one of his brilliant pianoforte solos. Not forgetting the skilful violin and violoncello playing of the Messrs. Fennings, or Mr. Harrison's clever whistling solo, mention must again be made of Mr. Franklin Clive, whose clear intonation and fine bass voice not only made a deep impression, but largely contributed to the success of the evening. This gentleman should certainly be a star in the musical firmament, and there is some reason to hope that with his help and that of other celebrities whose names are familiar as household words, there may be a Gresham concert in which musicians who "go a-angling" will give their services, and the Anglers' Benevolent Society accept the proceeds. Mr. Page sang "La-de-da" (of which he is the author) in his own inimitable way, and being warmly encored, gave "Still They Come," which provoked even further merriment. Mr. F. S. Gillett sang "The Bashful Man" very facetiously; Mr. J. E. Harding, Mr. Jardine, Mr. Young, Mr. Cartwright, Mr. Copeland, and others all doing their best to make the entertainment one that will long linger in the memory of those present. Mr. S. C. Harding gave his able recital of "Daniel *v.* Dishclout," and Mr. A. Ford an effective rendering of "Scrooge the Miser." Dr. Brunton made a capital chairman, introducing the vocalists very pleasantly, running them in, one after another, as his bayonet-pointed hooks do the fish who come under their potent sway. Mr. Charles Bates reads his paper on "Perch" on Tuesday next, so that another good meeting is assured. Mr. R. B. Marston has kindly undertaken to preside, the chair being taken at seven o'clock. Several members (weather permitting) hope to place a good show of fish on the tables that evening, and members of other societies will, as usual, be welcomed on signing the visitors' book.

ANSWERS TO CORRESPONDENTS.

W. C. FRANCE, Moseley, Birmingham.—"A.R I.E.L.," in his fly-fishing-spinning articles, is going to give some recipes for waterproofing lines. They are good; and we have seen his dressed lines, which are beautifully smooth. But you will find it cheaper to go to some good firm in Birmingham, and buy a silk line ready waterproofed. If you are not in a hurry wait a week or two for "A.R.I E.L.'s" recipes. You can get an 8-plait plain silk line very cheaply indeed.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*

WHEN WERE SALMON LAST TAKEN IN THE THAMES?

SIR,—I shall feel much obliged by your informing me when the last *Salmon* was taken in the Thames. Anticipating that you will kindly supply the desired information,—I am, &c., W. J. MCMULLEN.

East Dulwich.

We imagine it would be a difficult matter to give the exact date of the last capture of a salmon in the Thames above London—where they once were so plentiful. We give a few extracts from some angling books which refer to the matter.

Yarrell in his "History of British Fishes" (2nd edition, 1841), says: "A Thames salmon is a prize to a fisherman, which, like other prizes, occurs but seldom. The last Thames salmon I have a note of was taken in June, 1833. The appearance of the common tern or sea-swallow, which, on its arrival in May, wings its flight for miles up the Thames, is the signal to the fisherman to keep a good look-out for a salmom."

In his "Hints on Angling," published in 1814, Palmer Hackle says, page 297: "Salmon are now very rarely caught in the Thames." Dr. W. Wright, in his work on "Fishes and Fishing," published in 1858, refers to having seen a fish, said to be of seventy pounds weight, in the nets at Laleham, in 1789. He also says, p. 56: "Formerly, in walking by the side of the Thames on a summer's evening, anywhere above Sunbury up to Windsor, you would see large numbers of salmon leap out of the water by the side of the osier aits. Now the locks and weirs are so badly constructed that if salmon were to run the gauntlet of passing the pool, their further passage upwards would be completely obstructed by these badly-contrived erections."

In that very capital little work, "The Angler's Guide," by T. F. Salter Gent (sixth edition, 1825), the author says, p. 156, "Salmon are found in the river Thames, and, I believe, are justly considered superior in flavour to any bred in other rivers." He then describes the Thames and Medway methods of fishing for it with flies, or ledger-line, baited with mussels, prawn, or cockle, two large lob worms, &c.

Mr. Greville Fennell very kindly says, in answer to an enquiry we sent him on this matter:—

"DEAR MR. MARSTON,—You over-rate my powers of memory. I will, however, try and trace what you desire to learn.

"I am inclined to believe it was about the year 1852 that old John Harris, of the Lincoln Arms, Weybridge, said that he, with Harris, of Laleham, and two other fishermen, caught the last salmon (proper) in the Thames. I recorded his statement in the *Field*. They sold it at 7s. 6d. per lb.

"In 1860, two salmon were caught at Erith, one of 16 lb., the other 11 lb., and two grilse at Dartford Creek, one of 6½ lb. In 1866, a young salmon was taken at Isleworth by an angler dibbing with the house-fly.

"Yours very truly,
"J. GREVILLE FENNELL."

[This last was doubtless one of Mr. Buckland's youngsters, *put in*.—ED]

RESPECTING BARBEL BITES.

SIR,—Respecting barbel bites, in answer to "Lay Brother's" inquiry, I may say, as I am constantly fishing for them ledgering, I have often felt the bite he mentions in bream as well as barbel swims, but it is not always barbel that knock so hard as to take the rod nearly out of your hand. Master Trout has a little to do with it. I have found barbel bite like that when a swim has been overfished. For instance, fish a swim three days (I have longer), and after a time the fish know what's up—they are shy; that is, afraid; they snap and leave go. I have tried all manner of dodges—let the line slip, still no use. When I find that they are biting like that I leave the swim, say, three days or a week, bait and try again; but if they turn out to be trout, the sooner you catch them the better (of course if out of season put them back). Fishing with Mr. Allan one day, I had a heavy jerk. "See that bite, sir?" "No." Presently the gentleman had just such a tug, with better luck, as he got a trout two pounds. I have seen others caught this season in this way, so I think trout are often in the swim with barbel. You may strike how you like, but if the fish do not hook themselves there is little chance for the rod. The bream are on the feed these last two or three days, but the water is rising and coloured as well. No one has been down to fish, or I could have got some bream on for them, I think.—I am, &c., JAMES HASLETT.

Dec. 23, 1882.

BARBEL BITES.

SIR,—I expected in your last issue to see some answer to "Lay Brother's" inquiry on barbel-fishing; but finding that no veteran has enlightened him, I wish, although a novice, to assure him on one point regarding the fish—namely, they are not barbel at all that have led him such dances, but chub. I have fished (ledgered) mostly with the two hooks mentioned by "Mark Antony," and have fared the same as "Lay Brother," with the exception that I have generally managed to get one or two of the varmints, and they have always turned out to be chub. I have asked anglers up the Thames, and they have confirmed my belief. "Chub," says one shortly, in answer to my question. "Little chub," says another; "bite—bite like bulldogs." A third spoke to me about it, said he had tried his sharpest practice, but was scarcely ever in time. G. F.

P.S.—Of course I refer to day fishing. I believe they are caught at night better.

ROACH BITES—A NORFOLK OPINION.

SIR,—I do not intend to allude to any of the numerous opinions contained in the many letters from your correspondents on the above subject, but thought that perhaps a word or two as to my experience on the Yare and Bure might bear out the views expressed by some of them. I have had many years' practice amongst the roach on both streams, and can well remember many occasions on which it seemed next to impossible to miss a bite (even in a heavy rain and storm); but I must add that the bites on these occasions were what I should describe as steady, even bites, the float first showing to the practised eye a sign of a fish being at the bait, then going down steadily, though, of course, quickly. Not many bites are missed under these circumstances—not more than 10 or 15 per cent., I should think. At other times, in perfectly calm water, I have myself, and have seen several friends whom I look upon as some of the best roachers in Norfolk, miss bite after bite, the float always at these times disappearing like lightning, and, strike as you may, nothing results but loss of bait or temper. I believe these bites are caused by small fry, which seize the bait and take the float under, but are not often hooked. I use the old-fashioned tight line. The above is my experience, and I can find no better explanation. The same happened to the friends I mentioned, who were using a reel and fishing in the most approved Nottingham style. I should be glad to hear the opinions of some of our Norwich anglers or Yarmouth brethren, to all of whom I wish a successful and prosperous New Year.—I am, &c.,

ROBERT MOLL.

Hon. Secretary, Norwich Angling Club.

Prospect Cottage, Thorpe Hamlet, Norwich.

PIKE BITES.

SIR,—Can you inform me if the bite of a pike is poisonous? I was showing one that I had caught at Shepperton last week to a friend of mine, and he, thinking it was dead, put his finger in its mouth, and the brute closed its jaws so tight that he foolishly shook it off instead of getting some one to force its jaws open. I regret to say his hand and arm are very painful and swollen, and he is nervous about it. I assured him that I had received several bites, but had never been any the worse for them.

The fish had been out of water three hours.—I am, &c.,

Putney. J. HEWETSON.

[We do not think your friend need be alarmed, but he should be careful, as long as there is any inflammation or pain, to avoid stimulants and rich food. In a similar case, we found cold water bandages brought down the inflammation in a few days. A pike's bite is poisonous; the effect it has depends on the state of health of the party bitten.—ED.]

SPINNING FOR TROUT FROM THE REEL.

SIR,—In the last Occabot Club papers, the idea of applying the method of casting off the reel in spinning for trout is entered into. I have tried it, and found that there are two important practical defects which will always, I believe, prevent it from proving a successful style when practised upon wide rapid shallows, the most favourable water for spinning the minnow. The first of these defects has already been noticed, viz., that the unavoidable weight of a lead, in addition to the minnow, causes a splash that will disturb a shy fish like the trout. The second objection is that in Nottingham casting a wide circular sweep of the rod is necessary, and this much hampers the spinner in the neighbourhood of trees and bushes, rendering him in most trout streams unable to cast to the best feeding spots. The use of a lead in spinning for salmon is not so fatal, for the salmon usually takes in heavier, stronger streams, while on a salmon river the fisherman is more often at work on open water.

"Redspinner's" allusion to a method of Nottingham float-fishing, which enables him to get out 30 yards of line with a couple of swan shot on the trace, I do not clearly understand, unless he refers to paying the line off the reel, in which case the recovery of the line and spinning of the bait would be up stream. I have always found that a rapid, level spin of the bait down stream is the first essential in trout-fishing in shallows. A trout then makes a bold dash at the bait escaping him, whereas a slow, up-stream spin allows him time for inspection, which is quite against the chances of the fisherman.—I am, &c.,

SCOT.

[If "Scot" will try an eight or nine-foot rod, with few and *large* rings, he will find he can get his minnow out from the reel in a very confined space; but the reel must run like "greased lightning."—ED.]

TO PREVENT REELS WARPING, LANDING NETS, &c.

SIR,—I have been going to write you for some time past *re* several things that have cropped up in the FISHING GAZETTE.

How to prevent wooden reels warping, &c.: Give them two coats of painter's knotting—two pennyworth will last a long time; also good for binding of rings on rods, flights, &c.; dries in five minutes.

Should like to have a graining from Mr. Woolfall.

Plenty of azurine or blue roach in lake on estate of Col. Loyd, at Hawkhurst, Kent, and in several other ponds in the county.

I quite agree with you that a net is necessary, more especially as a means of lessening the strain on your fine tackle, as well as a means of landing your fish quickly. I do not agree with a short handle, but have one about 5 feet.—I am, &c.,

T. R. PRICE.

Maidstone Angling Society.

[Mr. Price gives an illustrated description of his method of carrying the landing net; but when we say that it entails carrying the handle on the basket horizontally, with the ends projecting on each side, our readers will, we think, agree with us that it won't do. The plan is radically wrong. Are the bushes, trees, &c., which Mr. Price meets with as he fishes all over six feet apart? Are all gates and gaps in hedges of this size? If not Mr. P. must be constantly on the look-out for a smash. On a treeless canal his plan might answer, but not in trout fishing.—ED.]

SIZE AND WEIGHT OF JACK.

SIR,—In reply to Mr. Lewis T. Johnson, I beg to inform that gentleman that I had the pleasure of taking the first jack at Wimbledon Lake last season, the weight of which was between 10 and 11 lb. (see list in cottage on wall), and the length was 35 inches. I am almost afraid to speak, but it seems simply marvellous that a jack weighing 27½ lb. should only be 2½ inches longer than one weighing 10¾ lb. or 10½ lb.—I am, &c.,

MARK ANTONY.

[See also what Mr. Jardine says on this point elsewhere in this number. —ED.]

TWICKENHAM FERRY.

SIR,—It is no doubt well known to most anglers who are in the habit visiting this well known spot, that there exists a first-rate roach swim, one th is seldom visited by anglers without their taking away a decent number and weig of fish, as almost every roach taken will weigh from ¼ to ½ lb. The members of o club, the Acton and Ealing, frequent this spot, and what we complain of is th annoyance we receive at the hands of the "old ferryman," who, to-day, whe we had fixed our punt at this well-known roach swim, persisted, in spite our admonitions, to cross our swim, his sculls almost touching our punt wh he had a fare to ferry over; and he had the audacity to tell us we had business there, and that we were preventing him ferrying his passengers ov That was, of course, ridiculous as it is patent to everyone who knows the sp that there is length and width to ferry over, let you pitch where you ma What we want to know is, can anything be done to put a stop to this gentl man's future annoyances? We are quite willing to make allowance for Chris mas time to the old fellow.

Can Mr. Brougham advise us what course it would be best to pursue if should repeat his conduct of to-day. We are informed that he has been the a number of years, and upon that account, we suppose, he considers the stret of water across which he ferries his own. Can we take any proceedings again him if it is renewed. That is what we wish to know, Mr. Editor.—I am, &

W. E.

[This is rather a difficult question. On the face of it, we think old Charon quite within his rights. The ferry is for the convenience of the public, and n to put money into old C.'s pocket. Suppose W. E. is a medical man call urgently to some case, and to save time he goes to the ferry and finds a pu or a dozen punts, in the way—for if one punt has a right to be there why n a dozen? We think W. E. would have an action against C. for permitti the punts to be there at all. As to the amount of space required by ferryman, as far as our experience goes, that varies according to the state the tide, strength of the stream and number of passengers. But doubtle some legal angler will give us the law on this point.—ED.]

HOUNSLOW FISHING.

SIR,—I should like to ask some of your numerous readers whether they ha experienced the same bad sport in their districts as we have this season Hounslow.

All our fishing-places, private or public, have been equally poor. At t Black Dog Water, Bedfont, roach did feed a little in June and July; sin then the record has been growing less and less, and many are the blank days have heard of.

The extreme lowness and brightness of the streams, added to the luxuria growth of water weed, which completely choked the rivers, may have cause last summer's bad sport; but what prevented our having some small amount fishing in the autumn and later?

There are plenty of fish, we know. How those big roach did splash about the evening, and even as late as September you could plainly see the dark for of monster bream and roach moving in shoals over the sunlit gravel shallow They didn't seem to care for the deeper water. I suppose they do now, a are snugly ensconced in the deep holes.

Perhaps it was the extra mass of weeds that gave the fish plenty of food a made them independent of the eternal bread and bran. It consoles one b little to say, as a brother angler here says, "that there are more fish left for next year." Perhaps there may be, and perhaps the same old never-tiring ga of empty baskets will continue.

Another complaint and I have done. It is about eels. I should be glad know where all the wrigglers have departed to this season. In former yea fishing for them, we have generally had some every night's fishing, but late the rule has been perhaps one, and that a little 'un; more likely none at all.

No doubt some of your readers have visited us this season and have far as we locals have. Let's hope it will improve next year.—I am, &c.

Lampton Road, Hounslow, Dec. 18. G. HAWKINS.

ODDS AND ENDS.

SIR,—Young anglers must be especially benefited, if not at times a lit perplexed, from reading the increasingly interesting correspondence in t F. G. The letters that have of late appeared about roach-fishing, and t different percentage of "nabs" to "nibbles" and "knocks," plainly show, my mind, how different is the experience of the same angler at different tim and under different circumstances. It is the same in shooting, as I know fro personal knowledge. It must be remembered that the roach of, say, the l fifteen or twenty years has been more and more pampered with ground-bait the upper Thames as far as Reading, and also in the Lea, than in most oth south-country rivers; and how can anybody expect but what at times t roach, full of the tossed-in stuff, merely nibble in a half-hearted fashion co pared with unfed roach in such a river as the Kennet for instance, and some the more distant stretches of the Isis or Thames? I know when a fairish cr of good roach could nearly always be got in the Kennet with far less fi tackle than is used nowadays, and when the fish were really "dead on" the was little difficulty in "nabbing" nine out of every dozen "knocks," "nibbles." But I think in an unbaited swim the bigger roach—say, from a pou weight and upwards—generally give a deliberate "knock" or pull at the flo not very unlike a chub at a piece of good old cheese, and the said roach seld missed being landed. It is certainly an advantage when fishing a canal river in deep water, close in, because you only require a rod of moderate lengt and can strike with facility. I have often been amused to see a lot of big fi of one sort or another swimming about near a well-known inn a little the Lea, at Tottenham, when a number of "disciples" failed to get a sing "knock," try as they would. It will no doubt be answered that anglers these days of "mad rush" to win prizes and become heroes in their own lit world, that they must use ground-bait or drop fishing altogether. But, I s that any man is only half an angler if he had not learnt lessons above a beyond mere success with his angle. It was the lessons thus learnt by Izaak Walton that make his writings so dear to all. Every flower, every bi every pretty "peep," or bend in river of stream—each and all speak to man the goodness and beauty of God's wonderful works, for did not a very gr man find sermons even in stones?

Every angler has at times, especially when in a dry, clear-water autum seen perch and chub in back waters or in shallowish streams, swimming ab heedless of the contortions of a nicely-scoured worm or the liveliest of live minnows dropped just in front of the dear fishes' noses. The fish were plai out for a holiday and a good sunning, and had lunched before starting. B speaking more particularly of live-baiting for perch or jack, I believe the less y throw your bait about, the longer and livelier your dace or gudgeon, bleak or m now will, of course, last. This is often very important. When I was a lad, I made it a point to watch intently an old and clever trout angler, and I always found that when he was ledgering with minnow he was especially careful not to let the little fish fall with any dash or splash upon the water. Modern anglers might smile when I say that on one occasion, finding the perch wouldn't look at worms, I caught a minnow in an adjoining stream and dropped the bait as caught in the perch hole, and a beautiful perch soon lay on the green grass. This I repeated for sixteen times, and didn't miss a single knock or a run. I often tried the same hole, but never got 'em on like that again. Therefore, there is no rule but what there are many exceptions to it, and the safest way is to take a middle course; though I cannot but believe that the fish nowadays are pampered and stuffed most inordinately, so that they have become as dainty as epicures. Complimenting you on the success of your little journal,—I am, &c.

London, S.W. FEED 'EM LESS.

BLUE DUN FOWLS.

SIR,—As the blue dun seems to be taking up the attention of anglers, probably the enclosed may prove of interest to your readers—it is copied from "Ornamental and Domestic Poultry," by the Rev. Edmund Saul Dixon, M.A.

"For an acquaintance with and a description of this very neat and pleasing variety I am entirely indebted to the kindness of a valued correspondent, as also for good living specimens of the birds.

"The blue dun fowls were first procured by us from Dorsetshire, but I know not from what part. They are under the average size, of a soft and pleasing bluish dun colour, the neck being darker, with high single combs deeply serrated. The cock is of the same colour as the hen, but has in addition some dark, handsome stripes in the long feathers of the tail, and sometimes a few golden or even scarlet marks on the wings, which, by their contrast, give the bird a very exotic look. The blue duns are exceedingly familiar, impudent, and pugnacious—indeed, I strongly suspect this sort to be a variety of, or nearly related to, the game fowl, having exactly that shape, and also disposition.

"I have fortunately hit upon a lovely little hen for you, but the cock I must apologise for; his colour is unimpeachable, but you must imagine that little crest to be absent and the comb to be single instead of double. His brother, who fully intended waiting on you in Norfolk, and was exceedingly perfect, was killed by a wireguard being blown down on him. I would send my own grown cock, but I believe it would cause a mutiny among the labourers, who sometimes give him and his wife the greater part of their dinners, he being impudent enough to take it either from their mouths or hands! They have named him Fred. It is the greatest fun to see a cock of this sort keeping up a playful fight with another, rather his superior, spinning and waltzing about him like a French dancing-master. Without more convincing proof I do not approve of their being called blue bantams, as although the breed is certainly small, it is still respectable in size, and the eggs are very fair in that respect. The hens are good layers, wanting to sit after laying a moderate number of eggs, and proving attentive and careful rearers of their own chickens—but rather savage to those of other hens. The eggs are small and short, tapering slightly at one end, and perfectly white. The chicks, on just coming from the egg, sometimes have a ridiculous resemblance to the grey and yellow catkin of the willow, being of a soft bluish-grey, mixed with a little yellow here and there.

"There is one peculiarity in this breed, which is that, if the variety is kept perfectly unmixed with any other sort, you will seldom obtain more than half the number of the proper blue duns, the rest being either black or white. (This would make us strongly suspect that, if their history were known, they are but a cross between two distinct varieties or species of fowls, and that they must eventually disappear by assimilation to the type of one or the other progenitor.) The white chickens, however, are afterwards sprinkled with dun feathers. Perhaps the original sort may have been either black or white, as we know animals will, after many cross breedings, 'cry back,' as it is called in some counties, to the origin whence they arose.

"The blue duns are nearly equal to game of any sort for eating. The hackles of the cock are always in great request for making artificial flies for fishing."—H. H.

"The theory that the colour of the blue duns results from a combination of black and white (*i.e.*, very dark purple or slate colour) in the progenitors, as betrayed by the habitual "crying back" of the breed, is confirmed by the fact of the speckled black and white or grey and white Spanish producing whole-coloured slaty-grey birds, though of a darker hue than the blue duns, in which the permanency of the tint appears to be equally uncertain. It will be worth while to keep some of the aberrant chickens of the blue duns and record the result of their propagation *inter se*.

"Had I time and space at my disposal, should try to re-introduce the breed by breeding from dark Andalusian pullets running with a pile or white game cock, then mate these with others similarly bred, choosing the bluest birds to breed from. This, I think, would produce birds of the right colour and stamp."—I am, &c., S. HOWARTH.

13, Station Street, Burton-on-Trent.

THE CHESTERFIELD ANGLING ASSOCIATION.

SIR,—The above association has been formed with a view of encouraging fish culture and preserving freshwater fish for angling purposes.

Arrangements are already completed with the Manchester, Sheffield, and Lincolnshire Railway Company for the use of the canal from Chesterfield Basin to Staveley Church Bridge, and some of the streams adjoining and tributary to the same have been secured, and we hope to have more shortly.

There have been 6500 trout fry put in at likely places, and we are now in want of some coarse fish for the canal, viz., perch, roach, tench, &c., which would require distributing according to the nature of the waters.

We have put in a considerable quantity of coarse fish.

We are desirous of obtaining railway travelling assistance. Will you kindly inform us what steps to take, where to apply, &c.?

If you could inform us how to get information as to rules, &c, we should take it as a great favour.

Hoping I am not interfering with your space,—I am, &c.,

26, Durrant Road, Chesterfield, G. R. HORNSTOCK, sec.
Derbyshire.

[Will some London club secretary kindly answer this?—ED.]

NATIONAL REFUGE HARBOURS.

SIR,—The following facts are almost unknown—we have it on authority of the Board of Trade returns—that in the official year 1881-82, the loss of life by shipwreck on our coasts was 984; in the last 27 years no fewer than 19,534 lives were sacrificed, and 55,410 vessels.

We have now a most powerful organisation composed of a very great number of our nobility, naval authorities, and leading public-spirited people of the greatest capacity and highest influence, who at the beginning of the new year will make a united effort for the protection and safety of our fishermen and mariners, and which effort, if supported by the many who care for the welfare and safety of our seafaring population, must command success.

The general aim of the Society is the prevention of loss by shipwreck of life and property on the coasts of the British Islands, and the improvement of harbour accommodation.

Each locality will be treated with strict impartiality on its merits alone as a purely national matter.

Such an organisation can never be too strong, and I shall be glad to hear from all volunteers desirous of working with us to mitigate these most serious losses of life and property, and be pleased to forward to them a list of the names of those by whom the movement is supported.

The Society's head quarters will shortly be in London, and it is desired to establish branches throughout the provinces, in the same manner as the Royal National Life-Boat Institution, and the Shipwrecked Mariners' Society.

Thanking you for granting a little space for me to plead the cause of seafaring men who perish in such large numbers annually from causes which are in great measure preventible,—I am, &c.,

F. JOHNSON,
Hon. Managing Sec.

23, Norman Road, St. Leonards-on-Sea.—Dec. 1882.

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

FACEACHE, TOOTHACHE, PAINS IN THE GUMS, NEURALGIA—ADAM SMITH'S NEURALGINE is a Certain Cure. Bottles, 1s. 1½d. 2s. 9d. Post free from Proprietor, Chemist, Wednesbury. London Agent, W. EDWARDS, 157, Queen Victoria Street; and all chemists.

PLEASE MENTION THIS PAPER.

COUGHS, COLDS, ASTHMA,
BRONCHITIS and NEURALGIA.
DR. J. COLLIS BROWNE'S

CHLORODYNE.

A few doses quite effectual.—Caution.—The extraordinary medical reports on the efficacy of Chlorodyne render it of vital importance that the public should obtain the genuine, which is protected by a Government stamp, bearing the words "Dr. J. Collis Browne's Chlorodyne." See decision of Vice-Chancellor Sir W. Page Wood, *The Times*, July 16, 1864. Numerous testimonials from eminent physicians accompany each bottle.

From W. C. Wilkinson, F.R.C.S., Spalding:—

"I consider it invaluable in phthisis and spasmodic cough: the benefit is very marked indeed."

Sold in bottles, 1s. 1½d., 2s. 9d., and 4s. 6d., by all Chemists.

Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell Street, W.C,

Cannon's Glue Powder

Sold in Penny packets. Equal in strength and quality to the best glues made. Useful in every house. Dissolves immediately in boiling water. Sold by Chemists, Grocers, Oilmen, and Stationers. Can be obtained wholesale from W. B. FORDHAM and SONS, York Road, St. Pancras, London; or from B. CANNON and CO., Manufacturers, Witham Leather, Glue and Parchment Works, Lincoln, England.

NO MORE WET FEET.—If you once use MILLEN'S SNOW and WET REPELLER and SOLE PROTECTOR, for Winter and Summer, you will not regret it. 5s. to 7s. saved for Sixpence. Although it is a speciality for the bottoms of the soles, it is equally beneficial to leather and kid uppers, not only rendering them quite waterproof, but more durable; also the original shape of the boot is kept until quite worn out, which gives a corresponding benefit to shape and ease of the foot, For Children's and Ladies' Shoes, also the heavier made boots, it is invaluable. Only one application, as directions, will last until the soles and uppers are worn out. Shoes can be blacked in the usual way. Sentfree for 7d. or 1s.—Postal Orders or stamps, from Humphrey Millen, Fern Factory, Little Marlow, Bucks.
